Take 1 cord = 100 cu. ft. solid wood.
= 128 cu. ft. in pile.

but it was generally stated that the best work was done by the companies' own camps. In connection with this, the difficulty of securing labor was pointed out, Mr. Kenny expressing the opinion that the companies could not compete with the contractors for Government building work, done on a cost plus percentage basis. Conditions were now such that unless a foreman said "Please" every time, the men stayed only two or three days. So far as labor-saving machinery in logging was concerned, the smallest item was cutting the trees; the chief expenditure was skidding the logs and the making of small roads.

Mr. Gardner having stated that his company had been paying on the piece work plan, this brought on a discussion as to methods of measuring, Mr. Ellwood Wilson declaring that the b.f. was an absurd method. The only rational method was the cubic foot, solid contents. No two scalers would agree as to measurement. The chairman

Retail Lumbermen Hold Gathering

National Association Urged to Get Together and Secure Adequate Representation at Washington

The second annual meeting of the National Retail Lumber Dealers' Association, which was held at Chicago, on September 18th and 19th, brought together over a hundred of the most energetic and enthusiastic members of the trade from various parts of the United States. Horace Boulthbee, of Toronto, Secretary of the Ontario Retail Lumber Dealers' Association, attended as the delegate from that body. While the programme for the meeting included the reports and other routine matters which pertain to an annual meeting, the gathering was chiefly notable for the earnest manner in which all the speakers discussed the great problems of the trade which have arisen out of the fact that the nation is engaged in war. Naturally, the embargoes and orders which the government has placed upon the shipment of lumber and the erection of houses and other buildings, was one of the main topics of consideration.

The crisis in the trade which has resulted from these embargoes and orders was thoroughly discussed, and the upshot was one of the most important developments of the meeting, namely, the appointment of a committee to meet with a committee of the State and regional associations and a committee of the wholesale sash and door

Charles A. Bowen, Detroit, Mich.
Re-elected Secretary of National Retail
Lumber Dealers' Association

interests, at Washington, for the purpose of waiting upon the War Industries Board to endeavor to secure a modification of the order regarding the securing of a permit for any building operations of a value of over \$2,500. The committee appointed consists of John J. Comerford of Detroit, John E. Lloyd of Philadelphia, and Warren J. Duffey of Toledo.

Washington will be Headquarters.

Another important result of the discussion of these matters was a decision that the headquarters of the Association should be moved to Washington for the time being, so that the officers may be in close touch with the important events affecting the trade that are daily having their origin at the national Capital.

The meeting opened on Wednesday, September 18th, at the South Shore Country Club, President E. A. Diebold of Pittsburgh, Pa., occupying the chair. The reports of the officers were presented and adopted, and showed that the Association had been accomplishing a wide range of important and valuable work. The secretary's report laid special emphasis upon the effort that the association is making to secure information on the cost of conducting a retail lumber business. This matter was made the subject of a lengthy discussion, which centred chiefly around two cost accounting plans drawn up by the dealers of St. Louis and Chicago, respectively. Finally these two plans were submitted to the Committee on Cost Survey, for further report.

The Finance Committee's report showed the necessity for adopting a new basis for the schedule of membership fees, as the association had finished its fiscal year with only a few dollars in the treasury, in spite of the fact that some of the directors had personally contributed to the funds of the association, considerably in excess of their

fees. A new membership fee schedule, which it is believed, will furnish ample funds for the coming year, was proposed and adopted.

Upholding Interest of the Retailers.

One of the most striking events of the meeting was an address by General L. C. Boyle, of Kansas City, legal advisor of the association, who strongly urged that the association should have direct representation at Washington, so as to make its interests felt whenever necessary.

In harmony with the points made by General Boyle were the suggestions contained in an excellent address by John E. Lloyd of Philadelphia, who spoke on the importance of organization among retail lumber dealers. He urged that the association should insist upon having a retail lumberman on the lumber committee of the War Industries Board, pointing out at the same time how much the retail coal dealers had accomplished by having a representative upon the National Fuel Administration. Some of Mr. Lloyd's other remarks were very forcible. He told the dealers that they should not be afraid to confide in one another in regard to the facts and figures of their business, and that the more they confided in one another now the better it would be for the entire trade after the war is over. The wonderful organization of labor was the best possible illustration they could have of the benefits accruing from co-operation. Such co-operation had made it easy for labor to get the ears of the "powers that be" at Washington. Those industries that were not so organized were just kept "going round in rings" at Washington, and were getting nowhere. It was all an illustration of the simple fact that "you can't get anywhere by sitting down at home."

The Work of Trade Associations.

A number of splendid addresses were delivered on subjects of timely interest. One of these, which was received with keen attention, was an address by Dr. Wilson Compton, the newly elected Secretary of the National Lumber Manufacturers' Association, and former Chief Dispatcher of the United States Shipping Board Emergency Fleet Corporation, who is one of the most advanced thinkers on economic subjects in the United States. Dr. Compton's address was a masterly review of the work of trade associations in the past and a consideration of their present activities.

Mr. John H. Kirby, of Houston, Texas, one of the largest manufacturers in the Southern States, delivered an inspiring address on "The Spirit of Democracy." One of Mr. Kirby's thoughts was of special significance to the members present. He said: "I would not make invidious comparisons as between the vocations of men, but you will permit me to say candidly that society can boast of no class of citizens that is doing more to perpetuate this Republic and to promote the happiness and patriotism of our people than you retail lumbermen. Why do I say that? The answer is obvious. Because you are home builders. In the very nature of your business you are studying out methods by which you can assist men and women to acquire homes, methods by which you can add to the jewels of the nation—more self-owned homes. This is the true Spirit of Democracy, the promotion of those things in our national life which add to our greatness."

Strong Staff of Officers Elected.

An address delivered by Charles S. Keith, of Kansas City, Mo., President of the Southern Pine Association, on the value of retail lumber associations working together in a national organization, was one of the most interesting of the meeting. The Southern Pine Association has undertaken to send to every retail dealer in the United States a printed copy of Mr. Keith's address.

The election of officers and appointment of new directors resulted as follows:

President—J. J. Comerford, of Detroit, Mich.
First vice president—Julius Seidel, of St. Louis, Mo. (Re-elected.)
Second vice president—J. H. Doppes, of Cincinnati, Ohio.
Treasurer—John Claney, of Chicago. (Re-elected).
Secretary—Charles A. Bowen, of Detroit, Mich. (Re-elected).
New directors—E. J. Barmer, New Orleans, La.; H. E. Montgomery, Buffalo, N.Y.; J. H. Doppes, Cincinnati, Ohio; Guy Gray, Cleveland, Ohio; D. S. Melloy, Erie, Pa.; Thomas R. Brown, Louisville, Ky.; F. W. Ferdon, Grand Rapids, Mich., and John J. Comerford of Detroit, Mich.

While a seaplane belonging to the B. C. Government was being sailed by Lieut. Victor A. Bishop, at Vancouver, recently, it fell, owing to engine trouble, and badly damaged the roof of a house. The machine was being tried out for the Forestry Department. The Provincial Government will be responsible for the damage sustained by the seaplane, which will be in the neighborhood of \$8,000. The forestry department had leased the machine from Hobar Brothers, the builders for one year, and the government undertook to be responsible for all repairs.

Wholesalers Discuss Embargo

Decide to Await Developments and Let the Situation Work Itself Out Normally

The Wholesale Lumber Dealers Association, Inc., resumed their monthly meetings on September 20th, at the Queen's Hotel, Toronto, where they met for dinner at 6 o'clock and held a business session afterwards. Mr. A. E. Eckardt occupied the chair. After several matters of routine business had been disposed of, a discussion took place in regard to the situation created by the embargo on the shipment of lumber into United States points north of the Ohio river and east of the Mississippi river, which has been ordered by the United States Government.

The subject was dealt with chiefly by Mr. A. C. Manbert, of the Canadian General Lumber Company, chairman of the committee on transportation, who gave his personal views of the significance of the embargo. The imposition of this embargo might seem pretty drastic to Canadian shippers, he said, but the basic significance of the whole matter to Canadians was this, that knowing what we did of the amount of lumber and other materials that were being used by the United States, up to date, and knowing also the existing restrictions of supply, we should feel that there was a reasonable guarantee, that every foot of lumber now existing, or that might be produced, would be wanted; because the statement might be fairly made that what the people of the United States had begun to do was only a starter compared to what they would be doing in the near future.

Mr. Manbert then gave figures to substantiate this statement, and added that in addition to the extensive programme for the erection of cantonments and other buildings directly related to the war effort of the United States, there was also the housing problem to be considered, and this was becoming very acute. Moreover, he was assured that the amount of business that was coming out in connection with boxes and box shooks was something absolutely overwhelming.

In referring to these matters, he said, he was seeking to explain indirectly why the United States government should take the steps they had taken in connection with the embargo on lumber. All it amounted to, boiled right down, was that we were in an acute phase of readjustment. We had never met this situation before in the way that other industries had to meet it. The Government had ordered what the other industries should do and was definitely controlling their output. The lumbermen were now up against the same proposition, and he believed that the only thing they could do was to await developments and let the situation work itself out normally. They could certainly count upon this, that every foot of lumber in pile, or to be produced this year would be needed, and then some, for governmental activities. As to the embargo, they might regret it as much as they liked, but he did not feel that there would be anything gained by going on record in connection with it in any way. This appeared also to be the feeling of most of the other members present and no action was taken.

Investigating Cost of Doing Business.

The cost of doing a wholesale lumber business also came under discussion at the suggestion of Mr. D. C. Johnston, of the Union Lumber Company, who thought that the Association should take some steps in the direction of investigating this problem because of the possibility of the government desiring to fix the price of lumber.

One of the members expressed the opinion that it would be well for them to give the subject careful study. His company had figured out its costs and had come to the conclusion that it cost them last year \$2.20 per thousand feet to sell their lumber.

Another member reported that his company figured on a percentage basis and believed that the wholesaler was entitled to ten per cent. gross profit over the mill cost to cover expenses and a margin for profit and loss, bad debts, etc.

A third member said that the cost of selling lumber should, in a sense, be divided into two categories, viz.:

- (a) Purely administrative and salesmanship costs, such as office expense, travelling, selling, etc.
- (b) Interest, insurance and items of that class.

His experience was that where they were not doing a specialized business but handling a miscellaneous line of merchandise such as pine, spruce, hemlock, etc., the costs of selling under the heading (a) were about four per cent. The average cost of pine products to-day was around \$40.00, which meant that the cost under (a) would be about \$1.50 to \$1.75. On top of that they would have to provide for their interest, insurance, etc. He therefore agreed with the former member who had placed the cost of doing a wholesale business at 10 per cent. One thing was certain, he imagined, namely that it was pretty hard to convince themselves that the costs of doing business had mounted in the degree in which they had. He doubted if all of them were fully awake to just how much it was costing them.

At the conclusion of the discussion a committee was appointed,

consisting of Messrs. Walter C. Laidlaw, J. B. Jarvis and A. E. Cates, to investigate the question of costs of operation as based upon the average experience of the members of the Association, and to report at their earliest convenience. The next meeting will be held on October 18th.

How War Industry Opens New Lines

Almost Every Sawmill in B.C. is Producing Contract Aeroplane Spruce Lumber

Military necessities for aeroplane parts required the creation of a special department of the war office to speed the production of spruce suitable for this work. The coast and island regions of British Columbia were known to contain high-grade Sitka spruce, as shipments of this magnificent wood had been sent to the Canadian Aeroplanes, Limited, Toronto, where the quality was demonstrated at this national plant of the Imperial Munitions Board which has a manufacturing capacity of approximately three hundred machines per month—a contribution of Canadian manufacturing skill and achievement to the science of aeronautics apart from its military advantages.

Mr. H. R. MacMillan of Vancouver, formerly chief forest ranger for British Columbia, supervised securing the aerial spruce requirements of this manufacturing plant. However, Canadian, Imperial and Allied requirements have grown to such an amazing extent that the war office was faced with the necessity of securing suitable aeroplane spruce in much greater quantities than the existing facilities would allow. It was not a case of making moderate increase in production, but a case of doubling, tripling, quadrupling, in fact multiplying tens of fold, the output with the least possible delay, or how was it possible to fulfil the plan for the present huge Allied air-fleet? Sitka spruce was needed. Clear, long-grained beams, free from knots or other defects were essential. Therefore, on the comparatively rare supplies of this timber in British Columbia, the authorities focussed their attention and allocated to the Imperial Munitions Board the responsibility of securing this supply.

A large number of contracts for sawing spruce lumber have been placed in British Columbia with the mills—in fact, almost every sawmill so situated that its facilities could be utilized for this purpose is producing contract aeroplane spruce lumber for the department. The pulp and paper mills are also large producers of aeroplane lumber.

Only the finest grades of clear, long-grained British Columbia fir free from knots or other defects are used in limited quantities as a substitute for Sitka spruce. Most of the fir lumber for this purpose is secured from the districts surrounding Vancouver and Victoria. The fir output of each sawmill is carefully inspected for selection if any contains aeroplane stock. The untiring assistance of the millmen and labor connected with this industry now permits monthly shipments of fir in amounts previously considered impossible. Ninety-three contracts covering this have been let for aeroplane fir, out of which forty-six mills have already contributed to this supply.

One of the most serious problems to be faced in connection with the aeroplane lumber industry was the necessity for organizing a water transportation system to enable equipment and supplies to be carried to newly established camps and facilitate the towing of logs or shipping of logs across Hecate Straits to Prince Rupert.

For this work the department secured the services of probably the largest and best tugboats on the Pacific Coast. Increased output has been reflected in increased demands for transportation facilities, necessitating the direct operation of a large fleet of towboats, barges and scows.

That these great natural resources of British Columbia are contributing to an important part of Canada's war activities is due to the organized effort to make available these undeveloped supplies of spruce and fir. Ordinarily this would have been an impossibility, but its realization has been accomplished by reason of the magnificent co-operative assistance of British Columbian interests which were in a position to aid in this work. Thousands of workmen, loggers and millmen contributed their efforts to the cause. Logging and mill operators individually and through their organization were consulted and freely gave their time and advice to the department. Government departments, particularly the forestry branches, also displayed their sympathetic interest in the work undertaken which with a loyal, efficient staff made it possible for the department of aeronautical supplies to fulfill its promises to supply large quantities of lumber for aeroplane construction.

The American Shipbuilding & Engineering Company, Ltd., Kitsona Reserve, Vancouver, B. C., have been awarded contracts for ships valued approximately at \$20,000,000. Work is to start immediately after yards, which are in the course of construction, are completed.

Making Your Plant Safe for Your Employees

Practical Pointers on the Proper Safe-Guarding of Woodworking Machinery—Prevention of Most Common Accidents—Various Forms of Guards

By Frank G. Lovett, Toronto*

The reason for guarding woodworking machinery or any other class of machinery, is to prevent accidents to operators and others, but before we designate what manner of guard is required we must know what the nature of the accident or accidents is, which we wish to prevent. There are certain accidents that are common to individual machines, and it is with these and the prevention thereof that I wish most particularly to deal.

The many varieties of work in a woodworking department and the number of operations to be performed, make it one of the most dangerous of modern employments. This is, perhaps, only natural in view of several facts—the comparative lightness of the material makes it easier to bring it to the tool than the tool to it. Again, good work requires the use of instruments sharpened to the extreme and run at very high speed. In the second place, this high speed and lightness of the material make it possible for waste pieces to be thrown by these tools in a dangerous manner, impossible in the case of metal or stone. For these reasons, among others, it is peculiarly essential that every possible precaution be taken to safe guard workmen against injury.

Ceiling and Floor Swing Cut Off Saws.

The first machine to which I wish to call your attention is the cut-off saw, the most common of which is the swing cut off saw, that which is hung from the ceiling or some other overhead construction. The accidents that are most common to this machine are to the operator's hands, by coming in contact with the saw while placing and holding material. The antidote for this is carefulness, keeping

A "kick-back" saw guard for which patent is being obtained

the hand away from the line of cut. Another accident is caused by the saw swinging too far over the bench and cutting the man about the abdomen. This can be prevented by a limit chain fastened to the saw frame and to the wall behind it, thus preventing the saw from coming past the edge of the bench. Still another is when the counter balance weight becomes loosened and falls on the operator's head. This can be avoided by a chain fastened to the weight by an eye bolt and the other to the ceiling or one of the hangers. The saw proper should also be equipped with a guard in the form of a half hood covering the top of the saw and the side next to the handle. A guard should also be placed behind the handle to protect the operator's hand from the belt.

We have also what is known as the floor swing cut off saw. This is a comparatively new machine and is not yet in general use, but I have submitted to the makers an idea for a guard, which I think should be effective on this machine. The saw is operated by a foot lever or treadle and for that reason is more dangerous than the older styles of over head swing, as the least pressure of the foot will bring the saw rapidly forward, and, like the punch press, requires the operator to be always on the alert.

Another cut off saw which is in general use is called the power cut off saw, which is also operated by the foot and requires a careful operator. One of the dangers that attend the two latter machines is that loose knots and slivers will be thrown in the man's face and endanger his eyesight.

A near relation of the cut off saw, but a much more dangerous

one to handle is the rip saw. This machine is responsible for more accidents than any other machine in the woodworking class.

The most common accidents are to men's hands and especially to his thumbs and it does not seem to make much difference what style of guard is used. This is due to the fact that in passing the work over a saw, the operator uses his thumbs more than any other part of the hand, and unless he is careful and keeps his eyes on his work, he is going to meet with an injury because, when the guard is raised high enough to clear a piece of material an inch or more in thickness, there is plenty of room for his thumb or fingers to go under

"Reliable Saw Guard," by Canada Machinery Corporation

also, and thus comes in contact with the saw; so that accidents to the hands are in most all cases due to carelessness on the part of the operator.

Another accident on this machine, while not happening as frequently as the ones mentioned, is of a much more serious nature and quite often results in death. I refer to kick backs. A kick back is caused from the piece of board which is being ripped pinching or binding on the saw and being thrown forcibly against the operator's body, usually striking him about the abdomen or groin, causing internal injury, which, as I said before, often results in death.

This accident can usually be prevented by having a proper spreader behind the saw. This spreader should be the same gauge

Jointer Guard, by Canada Machinery Corporation

as the saw and not less than two inches wide and should be set as close to the saw as possible—not more than an inch away—and in perfect alignment with the saw.

Placing Hood Over Top of Saw.

Another accident of a most serious nature is caused by slivers and loose knots being thrown upward from the saw, striking the operator in the face and quite frequently in the eyes, causing partial and often total loss of sight, which is very serious, indeed. This accident can be practically eliminated by the use of a guard or hood over the top of the saw. This guard may be hung by an adjustable

*Inspector of Industrial Accident Prevention Associations, Workmen's Compensation Act of Ontario.

frame from the ceiling or may be fastened to the spreader. The latter is, I think, the most convenient way and is the one which most workmen prefer. When no exhaust system is in use, it is necessary to guard the saw under the table. This may be effectively done by having a half disc of $\frac{1}{8}$ inch sheet iron fastened to the under side of the saw table. The radius of the disc should be two inches greater than that of the saw and should be placed as close to the saw as possible. With a rip saw thus guarded, and a careful workman, accidents on this machine should be reduced to a minimum.

There are many different styles of saw guards on the market, and in making recommendations we must take into consideration and be governed by the class of work for which that particular saw is used.

The Jointer or Buzz Planer.

This machine also has a bad record, but is gradually yielding to treatment. Accidents on the jointer are almost exclusively confined to the hands, the fingers being the part which suffers the most. Accidents are caused by the stock being kicked or thrown back from under the operator's hands, following the hand to shoot forward into the knives. This is generally due to the fact that the man had his hand too close to the forward end of the piece of work. An accident will also happen when edging stock, by holding the stock up to the gauge or fence with the left hand and passing over the exposed knives. The least kick of the knives cutting against the grain or striking a knot will cause the hand to slip and be caught in the knives. But much of the hazard has been removed by the introduction of the circular cylinder or safety head, and the use of an automatic guard which keeps all parts of the head not in use covered at all times. While there are certain classes of work for which the circular head is not adaptable, it can be most successfully used in the large majority of cases and should be strongly recommended.

Power Feed Planer Mishaps.

While this machine is much less dangerous than the jointer, still there are a number of accidents which are common to this machine. They happen where the operator in feeding stock into the machine has the habit of following the work up with his hand while he is picking another piece from the truck, and if he is not careful, or the proper protection is not provided, his hand is caught in the feed rolls and badly crushed. This can be prevented by having a guard rail placed across the machine in front of, and not more than six inches from the rollers, and not more than $\frac{1}{2}$ inch above the stock. This will stop the hand from reaching the rolls and thus avoid the accident.

All gears and pulleys should also be properly guarded. The off bearer, who is usually a boy, must also be protected. Accidents often happen to him because his hands are not kept busy and in those idle moments he has a habit of putting his fingers in the opening in the bed in which the feed rolls run. If the operator does not warn him when he starts to feed, a piece of stock comes through and pinches off the ends of his fingers. A good way to prevent him from getting his fingers in there is to have a fall board fastened to the cleaner bar over the roller with hinges, which rests on the bed of the machine and is lifted by the stock as it comes from the delivery rolls. Another good plan is to fasten an extension to the bed of the machine about eighteen or twenty inches wide. This will keep the boy far enough away that he cannot reach into the machine. Planers thus guarded, and with an exhaust hood over the cylinder only require carefulness on the part of the operator to eliminate accidents entirely.

Dangers of the Band Saw.

This is another wood tool that, while it is not as dangerous as the circular saw, is nevertheless dangerous. Saws will break and whip around in a dangerous manner or they will run off the wheels and often cause serious injury, and, as has already happened, cause the death of the operator by being thrown around his neck, or the operator may be thrown forward and run his head against the saw blades. These accidents can be avoided by placing proper guards over the upper and lower wheels. These guards should be (preferably) of metal frame with wire mesh filling and should be large enough to completely cover the face of the wheel. They should be hinged to a metal or wooden channel in which the return blade runs and is protected. An adjustable extension should be attached to the upper wheel guard, to come down in front of the cutting blade, to protect the operator's head.

The last machine we wish to deal with is the Shaper. This machine had a very bad record in the past, but like the jointer, has improved wonderfully during the past decade. The most serious accidents that happen on this machine are to the hands, because like the jointer again, the operator must hold the work with his hand while passing it over the knives and because the work is band-sawed in all manner of shapes and requires the operator to watch very closely the grain of the wood so that he does not cut against the grain, which, if he does will often cause the piece to break and let the handle

come in contact with the revolving knives. But, if this should happen, and the man is using an efficient guard—and there are a number of good ones on the market to-day—he will be comparatively safe as the guard will prevent his hands from reaching the knives.

The spindles of the shaper should always run out, rather than in. In this way, if a piece of work is kicked away from the knives, he will be thrown away from the other head rather than into it.

These are the general principles and reasons for guarding these machines. Couple with these a careful workman and accidents will be a thing of the past.

Beam Stock for Munitions Board

The Whalen Pulp & Paper Mills, Ltd., of which A. E. Millington is manager, have been turning out some splendid beam stock which has been accepted by the Imperial Munitions Board Inspectors. One of these perfect sticks as shown in the cut is 38 feet long, and in dimensions 6-in. x 24-in. Another recently accepted was of the

Splendid specimen of beam stock

same length 6 in. x 22-in. Both pieces were manufactured by the Whalen Company at their plant at Swanson Bay, where they have during the past three months shipped 1,000,000 feet of airplane lumber, and at the present time are very busy in all departments.

Holt Interests Purchase Oconto Operation

A deal of more than ordinary importance has just been consummated at Oconto, Wis., whereby W. A. Holt and associates have taken over the interests of W. E. Williams and a part of those of W. L. De Witt in the W. E. Williams Co. (Inc.). This gives Mr. Holt and his associates control of the corporation, the name of which has been changed to the Holt Hardwood Co. The officers of the new company are: President, W. A. Holt; vice president and manager, W. L. De Witt; treasurer, George H. Holt; secretary, A. Klass.

The new company will continue to manufacture the "Oconto Brand" of maple and birch flooring and will also specialize in kiln dried hardwood lumber. The plant of the Holt Hardwood Co. is an excellent one.

Highly Capitalized Lumber Company Sold

The assets of the British Canadian Lumber Corporation were recently sold for \$2,250,000 to a committee of the bond and security holders, and a new company has been formed under the title of the British Timber Corporation. The assets of the company include the mill and property of the old Pacific Coast Lumber Co., on George street, Vancouver; a mill and property of Lulu Island; a mill and 9,000 acres of timber land at Crescent Valley; five Dominion timber berths at Port Moody; logging railroad, camps and equipment at Port Renfrew; a sawmill in course of erection at Masset Inlet and between 200 and 300 provincial licenses.

The British Canadian was the company formed by G. F. Johnson, formerly of Montreal, and associates, in 1911, but it never succeeded and finally passed into the hands of British Security holders, who have since been endeavoring to reorganize it. The original capitalization was \$8,800,000 preference and \$9,930,000 common stock besides which it had over \$1,000,000 three year collateral notes outstanding in 1913.

The National Shipbuilding Company, Goderich, Ont., have received a \$50,000 contract for war work. They are in the market for supplies of iron and steel.

Why Lumber Retailers Want New Lien Law

Present Measure is Defective in Many Respects—The Good Points of Certain State Acts—Unjust Provisions of Business Assessment

E. M. Barrett of Ottawa, chairman of the Committee on Legislation and Transportation, presented an interesting and comprehensive report on the important work of that body at the recent special meeting of the Ontario Retail Lumber Dealers' Association, in Toronto.

The report is as follows:

Your Committee on Legislation and Transportation is composed of local committees in the different districts into which the Province has been divided, for the purposes of our association. The members of the local committees have given attention to matters coming under the head of legislation and transportation, and local meetings have been held upon such occasions as have been considered necessary for the purpose of discussing these matters.

Under the heading of **Legislation**, I propose, as chairman of the General Committee on this subject, to refer briefly to three matters; first, the Ontario Mechanics' Lien and Wage Earners' Act; second, the Ontario Assessment Act, and third, the Jacobs Bankruptcy Act, which was before the Federal Parliament at the last session.

The Mechanics' Lien Act of Ontario has always been a thorn in the flesh of the retail lumber dealer, and the objections he has to it are shared by the material men in general, as well as by building laborers. Lack of co-operation among retail lumber dealers in the past has made it impossible for them to present their views in an effective manner before the Ontario Legislature, and, for this reason, no attempt of importance has been made to have the Act altered in such a way as to make it resemble an Act to give protection to those who supply material and labor for a building. During the last session of the Ontario Legislature an effort was made to have a few amendments to the Act passed. This was done by a committee of the Lumbermen's Credit Bureau, Toronto, which is composed of lumber and supply dealers, and while all the amendments desired were not secured, on account of the large amount of other business, which the Legislature had to handle, some of the amendments were carried, making the Act somewhat more acceptable to the retail lumber dealers. The committee which had this matter in hand was composed chiefly of men who are members of the Ontario Retail Lumber Dealers' Association, and whose services have now been enlisted upon our Legislation and Transportation Committee.

The Points Cleared up Last Session.

The points, which the amendments that were carried at the last session, were designed to clear up, were as follows:

1. To make clear that the interest of an owner who sells land on agreement which requires the land to be built upon should be subject to lien.

2. The provisions of the old Act in regard to lien having priority on the increased value over a prior mortgage are in effect of no value. The amendment provides for such priority being made effective.

3. The law was made clear as to the material man's rights where material is delivered to a job where several houses or stores are being erected. Formerly, it was not clear as to whether he must prove use in each house or store.

4. Formerly, the Act said that the material must be delivered upon the land liened, and we have now included in it the words "or adjacent thereto."

5. Section 8, sub-section 4, reads: "The selling value of land encumbered by a prior mortgage or other charge, shall be deemed to be increased by the value of the work or service performed upon and of the material furnished or placed upon or adjacent thereto."

The chief point of interest brought out by our work was the fact that there is reasonable hope for success in securing a complete new Act, if our Association will take the matter up seriously. No half-hearted endeavour, however, will secure results. Therefore, I hope that if this association decides to enter a campaign for a new Act, the work will be done thoroughly, and that the committee in charge will have active assistance from every member of the association, not only in designing the new Act, but in steering it safely through the difficult channels of the Legislature.

Does Not Protect Material Man.

There is one great defect in the Mechanics' Lien Act of Ontario, and many minor defects. It is supposed to protect the man who furnishes the materials and labor for a building, but in reality it does nothing of the sort; in fact, it leaves him with scarcely any protection

and gives the greatest possible protection to the man who wants to put up a building at other people's expense. There is a provision of the Act, which, when it was passed, was thought to have the effect of giving the material man and the laborer ample protection. I refer to the provision that the owner must retain 20 per cent of the amount of the contract, for the satisfaction of all liens. This would be a good enough provision, if it were accompanied by directions regarding what the owner shall do with the other 80 per cent., but there is no such provision in the Act, and so long as the owner can show that he has paid to the contractor no more than 80 per cent. of the contract price for the work, which has been done, he has no liability under the Act. Those who have experienced the working of the Act know that this results in the owner being protected and the contractor being placed in a position where he can get his hands upon a large amount of money not belonging to him, and do with it very much as he pleases; while the material man and the laborer have only 20 per cent to fall back upon, if the contractor has been either dishonest or incapable. The dishonest contractor is encouraged to make improper use of funds, and the incapable contractor is encouraged to speculate with other peoples's money. When the show-down comes, the material man and the laborer always suffer.

Eliminate All Unsatisfactory Features.

In the discussions which we have had upon this subject, it has come to be recognized that we should seek, first of all, to have the Ontario Legislature pass a Lien Act which will do away with the unsatisfactory feature to which I have referred. We should centre our efforts upon this point and keep at it until we have been successful. I believe that we can persuade the Government to give us such an Act, if we show that we are determined. We may not carry our point during the next session, but if we keep up the pressure continually I believe the result will be as we desire in the end.

I have not ventured to prepare a draft of a new Act, as this would be a very difficult undertaking; one, in fact, which should be handled by a competent legal man. Rather, I have thought it best to lay this one point before you for consideration in order to secure your approval of our point of view, before going any further. Practically all the details of the Lien Act revolve more or less around this one point, and if we reach a unanimous conclusion upon it the rest of the work of drawing up an act and submitting it to the legislature, will be simplified. I wish, however, to draw your attention to the fact that a campaign of this nature cannot be carried on without considerable expense, for lawyers' services, both in drafting the Act, and in urging its passage by the Legislature. I would like you to give this matter thought, so that when we embark definitely upon the work we will not be hampered either by lack of unanimity among our members, or by scarcity of funds for carrying the campaign to a successful conclusion.

Features of Lien Acts in Certain States.

By way of intimating what our proceeding will be, if the suggestions we make meets with your approval, I will draw your attention to a few of the Lien Acts which have been passed by the States of the Union, which, I think, will serve us as a useful guide. Ohio, Wisconsin, Michigan and New York States, all have sound, progressive lien acts, which are based largely upon the one idea of rendering the owner fully responsible for the material and labor, which are put into his building. In their general features, these Acts bear considerable resemblance to one another, and for purposes of legislation, I will refer to the Act now in force in the State of Ohio, with the passing of which the Ohio Lumber Dealers' Association had much to do. The Act provides that when a payment becomes due to a contractor, the owner, before he makes payment, shall require from the contractor an affidavit made out by the contractor, in accordance with a form which is embodied in the Act, showing all of the names of unpaid laborers and the amount due to them, and the names of material men who have supplied material, and the amounts due to them, accompanied by certificates to verify the amounts. Similar affidavits are required in connection with sub-contracts. When he has received these affidavits, the owner must pay the amounts due, and it is at this stage of the proceedings that an important change is made, in comparison with the old acts like that which we now have in Ontario. The payments are not made to the contractor. They are made to the material men, laborers and sub-contractors direct. When

all these amounts have been paid, if their total is less than the contract price for the work that has been completed, the owner can then pay to the contractor the remaining difference. Moreover, if any of the material men or laborers file affidavits with the owner, showing amounts due, which do not agree with the amounts mentioned in the affidavit, the balance of the contract price cannot be paid over to the contractor until the difference has been settled.

It will be seen that that such a law is what all of us have supposed the Mechanics' Lien Act should be; namely, an Act giving protection to those who have supplied materials and labor, such protection being in the form of a lien against the property. If this point is made clear we will be in a position to discuss the future proceedings of our Legislation Committee and to arrive at a definite plan of action, and I hope that this meeting will pass a resolution instructing the Legislation and Transportation Committee to proceed along these lines. With this point settled, I believe that you can leave it with your committee to work out other details.

The Experience of N. Y. State Retailers.

I wish, by way of warning, to refer to the experience of the Retail Lumber Dealers Association of the State of New York. This association, in co-operation with other associations, who were interested in the same subject, prepared a proposed lien act, along the lines that I have already discussed, and they brought it before the New York State Legislature. Before the Act had been passed by the Legislature, however, it was subjected to very serious amendments, which obliterated many of the progressive changes that the lumber dealers desired. Finally, however, the Act, in its amended form, was passed, but before it could become law it had to receive the sanction of the Governor of the State, and I regret to report that the interests opposed to the Act put up such an effective lobby that the bill was vetoed by the Governor, and all the work of the lumber dealers was in vain. Moreover, they had spent a very large sum of money, promoting the bill. This was a very disheartening experience, and if we undertake any work along the same lines in Ontario you will realize, therefore, that we must study our plan of action and prepare every detail of it very thoroughly in advance. Personally, I feel that the Mechanics' Lien Act, as proposed by the Retail Lumber Dealers of the State of New York, could be adopted by us, with some alterations to make it fit in with our particular conditions. I am opposed to offering any amendments to the present Act, but that is my own personal opinion only. I feel that if anything is to be accomplished we must simply make up our minds that it is a big undertaking, and requires the undivided services of our biggest men, together with the co-operation of associations similar to our own.

Several suggestions in regard to particular features of the Act have been made by members of the various local committees on legislation and transportation. I will outline these briefly. Strong objection is taken by some members to any Act which requires that a motive shall be given to the owner prior to the delivery of goods, in order to give protection to the material man. In the State of Pennsylvania, I believe, the dealer is given ninety days after the delivery of last goods, to notify the owner, and an additional 90 days after this notice, to file his lien. Thirty days is too short a time after last delivery. Possibly a compromise might be reached on 60 days.

Claims of Wage Earner and Material Man.

One of the members of the Legislation and Transportation committee in our western district, in a letter discussing the Mechanics' Lien Act, says: "I had previously been under the impression that a wage earner, or a material supplier could apply to the owner of a building for protection of an account against a contractor, and that, providing the owner was served in writing, he would keep out for him the amount due to the contractor. I do not see any clause to this effect in the Act, however, and I think that one should be added so as to bring about this change. I would suggest the following: "In all cases the person primarily liable upon any contract under or by virtue of which a lien may arise shall, as the work progresses, or as materials are supplied, under the contract, reserve from the payments to the contractor an amount sufficient to pay in full the just claims of any wage earner or claimant for material supplied, for a period of thirty days after the completion or abandonment of the contract, if he has been notified in writing by the said wage earner or claimant to that effect, within three days after the first material is supplied or the work started."

In connection with the matter of responsibility of the owner, the opinion of the committee on Legislation of the western district is similar to that which I have already outlined. After holding a recent meeting of the committee, the chairman, Mr. W. J. Aitchison, of Hamilton, reported that they came to the conclusion that the most important point in connection with the Mechanics' Lien Act was to make the owner of the property responsible to the supply men for all the material supplied for that job and ordered by the contractor. This, they point out, would put the onus of selecting a responsible

contractor upon the owner, and make him share with the supply men the burden of seeing that the contractor does his work properly. It would also prevent the owner from stepping in, in case the contractor defaults, and using up the 20 per cent. on the building without any regard for the rights of the parties who supplied the material. "We feel that this is the most important point," Mr. Aitchison says, "and that it should be strongly urged."

Business Assessment of the Lumberman.

I come now to the second subject of my report, and what I have to say upon this will be brief: The Ontario Assessment Act contains a section, No. 10, dealing with "Business Assessment," sub-section one, paragraph (E) of this section says:

- (e) Every person carrying on the business of what is known as a departmental store or of a retail merchant dealing in more than five branches of retail trade or business in the same premises or in separate departments of premises under one roof, or in connected premises where the assessed value of the premises exceeds \$20,000, or of a coal or wood or lumber dealer, lithographer, printer or publisher, except the publisher of a newspaper, or the business of selling, bartering or trafficking in fermented, spirituous or other liquors in any premises in respect of which shop license has been granted, shall be assessed for a sum equal to 50 per cent. of the assessed value; but in cities having a population of not less than 100,000 coal dealers shall be assessed for a sum equal to 30 per cent. of the assessed value.

I wish to draw your attention to the following phrase: "But in cities having a population of not less than 100,000, coal dealers shall be assessed for a sum equal to 30 per cent. of the assessed value."

This provision is unquestionably unfair to the retail lumber dealers. I cannot, for the life of me, see why a coal dealer should get off with a 30 per cent. assessment, while the lumber dealer has to pay 50 per cent. If we had been on hand when this section was being enacted, and had presented our case properly, we would have been assessed on the same basis as the coal dealers. This matter is brought to your attention at the request of some of the members of our association, and if it is the wish of the Association that we should endeavor to have the Act altered as indicated, we will make it our duty to take whatever steps we can in this direction.

The Proposed Federal Bankruptcy Act.

I come now to the third subject referred to in my introduction; namely, the Jacob's Act respecting bankruptcy, which was before the Federal Parliament at its last session. I was only able to obtain a copy of this Act a few days ago, but from a perusal of it, I am led to the belief that it contains much that is of importance to the retail lumber trade. For instance, the idea of the Act is to allow the Court to take proceedings against any jobber and to demand a petition in bankruptcy. In other words, if a jobber commits an act of bankruptcy, the Court may adjudge him of bankruptcy. Then if the jobber proves that he made an assignment without intent to defraud, he will be free as soon as the assignment is made, not being required to wait for six years for a clear sheet, as at present.

TRANSPORTATION is one of the subjects with which this committee has to deal. There has not as yet been any occasion for us to take definite steps in this connection, but we have kept in touch with the general transportation situation, and are prepared, if the occasion should arise, to take any action that may be necessary. Transportation problems enter extensively into the affairs of a retail lumber dealer and are of much importance to him. For this reason the recent increases in freight rates upon lumber have affected us closely. These increases add just so much to the cost of the material which we carry in stock, and to a great extent the situation must adjust itself, as the consumer cannot expect to escape the increased cost. Nevertheless, on account of the various sources of supply that are available to us, and the frequent fluctuations—or rather increases nowadays—in the cost of lumber delivered at our yards, dealers sometimes feel that they can absorb the increased cost arising out of higher freight rates. Without wishing to enlarge this report into a consideration of prices or of the cost of doing business, it is worth while to impress upon the members of this Association the fact that, as an element in cost, freight rates must be checked up closely, and that increases in freight rates must involve corresponding increases in the prices of the goods which are delivered from our yards.

Effect of Increased Freight Rates.

Some of you may consider that if you buy upon a delivered cost basis, you need not take this matter into consideration, but in forming this conclusion you fail to bear in mind the fact that if the wholesaler is paying the freight charges, they are being included in the price which he quotes to you, and must finally come out of the con-

sumer, and for this reason it is not safe for the retailer to neglect the advances and fail to protect himself against them in his prices.

There have been a number of increases in freight rates on lumber, and lumber products, since this Association came into existence. For a time, the situation was quite confusing, but quite recently it has been simplified by an Order-in-Council, passed by the Dominion Government, which makes the present rate fairly easy to figure, by taking the old rate which was in effect at the beginning of the present year, adding to it one cent. per hundred pounds, and then adding twenty-five per cent.

There is another matter in connection with transportation to which attention should be drawn. Every retail lumber dealer should be thoroughly familiar with the allowances to which he is entitled from track scale weights, to cover absorption of moisture, accumulation of ice and snow, stake dunnage, etc. I find that many dealers are not aware of the full amount of allowance in this respect, and that the local agents of the railways frequently dispute the amount claimed. These allowances are covered by an order of the Dominion Board of Railway Commissioners, and if the agent of the railway company will not grant them in full, you should send particulars to the Secretary of our Association who will take it up for you.

The allowances to which you are entitled are as follows:

December 1st to April 30th:

On box or stock cars 500 pounds

On flat or gondola cars 1,500 pounds

May 1st to November 30th:

On box or stock cars 500 pounds

On flat or gondola cars 1,000 pounds

These allowances apply to shipments from all parts of Canada.

The Proper Share of Freight Cars.

The distribution of freight cars is a matter of much interest to retail lumber dealers. We have felt lately that we have not had our proper share of the cars during the last year or two. Then again, in the matter of per-diem charges, we think there is room for improvement upon the methods of procedure now in operation. In many instances delivery of freight is begun within an hour after cars are placed on private sidings, but firms which are prompt in this regard, are not allowed any latitude if they occasionally happen to be delayed for an hour or two over the per-diem limit. I think there should be some reciprocal arrangement in this connection. Referring once more to the matter of increased freight rates, I would suggest that our Secretary be instructed to ask the Chairman of the Dominion Board of Railway Commissioners for a statement of the arguments for and against this increase. My understanding is that they have been introduced under the cloak of the "War-Measures Act." This is borne out by the last paragraph of the Order-In-Council putting the increased rates into effect, which says:

"The rates herein prescribed shall be effective on and from the first day of August, 1918, and shall remain in force for the duration of the present war, and until further ordered, etc."

Being introduced as a War Measure, we are not at liberty to make any objection to these dates.

In connection with the filing of tariffs by the Railway Companies, I feel that it is an entirely wrong principle that the railways should be permitted to increase their rates by filing tariffs with the Board of Railway Commissioners without the public having ample opportunity to present their objections. I would suggest that our Secretary be instructed to get into close touch with the Secretary of the Canadian Lumbermen's Association, in order, at all times to be able to present arguments of the lumbermen before the Board of Railway Commissioners, when new tariffs or other changes of importance are proposed.

Better Outlook for Transportation.

I am glad to be able to report that, according to information I have received, we may hope for an improvement in the car supply during the coming winter. I understand that the Dominion Board of Railway Commissioners intend to see that the shipment of grain from the Prairies to the Sea Board is handled in the most expeditious manner possible, and that, as a result, we may count upon a reduction in the car shortage.

In conclusion, I have a proposal to make, which I would like to hear discussed, and in connection with which, I think we should pass a resolution. I refer to the work of the Dominion Board of Railway Commissioners. This board is greatly overworked, and, I believe, that it will be necessary, at an early date to relieve it of some of the detail work, possibly by the creation of Provincial Boards. At the present time, it would appear that the Government have only time to hear the arguments of the Railways, and it is a difficult matter for the public to present their side of the case. Nevertheless the lumbermen should have representation before the Commission. Their interests should be protected at all times.

Computing the Selling Price Quickly

Mr. John F. Scott of Bridgeport, Ohio, Outlines a Piece System Which is Worth While Using—How It Works Out

I would say to the person estimating lumber, especially frame lumber, would be whatever rate per M they want to estimate at, to figure up each piece and set down the price for each piece and multiply, as that is quicker than setting down a long column and extending it and then have to go over it.

One thing I have found in counting $1\frac{1}{2}$ in. lumber, 16 ft. long, without much multiplication and worry, is just to take the width of the board and multiply that by 2. $11\frac{1}{2}$ in. wide, $1\frac{1}{2}$ in. thick, would give you 23 feet; that is all that is necessary to arrive at; or $11\frac{1}{4}$ in. wide would be just twice the width of it, $22\frac{1}{2}$ ft. Of course, if it is 12 ft. or 14 ft. it would be that much less, and could be shortened that way.

When it comes to counting lumber, 1 in. boards, for example, take $\frac{1}{2}$ of the width and multiply by the number of boards.

Example:—

5 boards, 1 x 8—8, at \$30.00, would be	.80
5 boards, 1 x 10—9, at \$30.00, would be	\$1.12 $\frac{1}{2}$
5 boards, 1 x 10—14, at \$30.00, would be	1.75
5 boards, 1 x 12—10, at \$30.00, would be	1.50

That would make \$5.17. Now, if you want to tell how many feet there were in that, divide by 3, which would give you $172\frac{1}{3}$ ft. of lumber. That will work in all 1 in. at \$30.00 per M. If you want to make it at \$60.00, just take half of the width, multiply by the length and then by the number of boards. To get that into feet, you would divide by 6.

Multiply Length by One-half Width.

When it comes to 2 in. lumber, for example, you would multiply the length by $\frac{1}{2}$ of the width:

5 Pcs. 2 x 4—10, at \$30.00.....	\$1.00
5 Pcs. 4—12, at \$30.00	1.20
5 Pcs. 2 x 6—14, at \$30.00	2.10
5 Pcs. 2 x 8—16, at \$30.00	3.20
5 Pcs. 2 x 10—20, at \$30.00	5.00
5 Pcs. 2 x 12—24, at \$30.00	7.20

Making \$19.70 at \$30.00 per M. To find the feet, divide by 3, which would give you $656\frac{2}{3}$ ft. Of course, you can easily prove that it is correct by multiplying by 3.

If you wanted to take it at the rate of \$60.00 per M., 2 in. stock, multiply width by the length:

5 Pcs. 2 x 4—10, at \$60.00.....	\$2.00
5 Pcs. 4—12, at \$60.00.....	2.40
5 Pcs. 2 x 6—14, at \$60.00	4.20
5 Pcs. 2 x 8—16, at \$60.00.....	6.40
5 Pcs. 2 x 10—20, at \$60.00.....	10.00
5 Pcs. 2 x 12—24, at \$60.00	14.40

Which would make \$39.40 for this lumber, at \$60.00 per M. Then if you wanted to find how many feet in this, just divide by 6, and it gives you $656\frac{2}{3}$, and if you want to prove it, multiply by itself again, and it gives the first answer, \$39.40.

If you wanted to find how much 1,111 pcs. 2 x 10—20, at \$30.00 per M., you would just take $\frac{1}{2}$ of the width, which would give each piece at \$1.00; and all you would have to do to tell how much that this is worth, at \$30.00 per M. would be to multiply by the number of pieces you set down. This would be worth \$1,111.00, and to find out how many feet were in it, divide by 3, which would give you $3703\frac{1}{3}$ ft.; and to prove that, multiply by itself, and it brings \$1,111.00. If it was \$60.00 per M, just multiply this by the width of itself—say it was 2 x 4, multiply by 4, and that would be \$60.00, and if you wanted to run it at \$120.00 per M, if it was good stuff, you would just multiply 2 x 4, the width by the length, and divide by 12, and still give you your number of feet.

In counting yellow pine and poplar base, it will work out just to multiply the width by the length—say 1 x 5 casg. 8 ft. long, would be 40c. If it is hardwood, just double this and it will make a profitable figure to base on.

This is all based on the same principle as 12 in. to the ft. Most anybody can work it out and have it handy for any price. A piece system is a great deal better than throwing it into the thousand, and then multiplying each lot at whatever you want it per M.

A yellow poplar tree of giant size, which for years had stood in the hills of the Cumberland Mountains, Ky., where it was an object of unusual interest, has recently brought approximately \$11,000 as a manufactured product. The tree was cut down by a local lumber concern, and consigned to a firm in Cincinnati. When sawn, the product totalled nearly 7,000 ft. of first-class lumber with several hundred feet second-class lumber thrown in.

Personal Paragraphs of Interest

W. J. Lovering of Toronto, is on a business trip to various points in the west and will go as far as the Coast.

A. E. Gordon, of Terry and Gordon, Toronto, is visiting the principal mills in British Columbia.

J. L. Campbell, of Campbell, Welsh and Paynes, Toronto, returned recently from an extended visit to various points in Manitoba and Saskatchewan and reports having had a very pleasant holiday. It is three years since Mr. Campbell's last trip to the west and he noticed a great change in many of the leading centres.

Corp. George H. Gilchrist, son of John C. Gilchrist, lumberman, 180 Perth Ave., Toronto, died recently in France from gunshot wounds received in the abdomen. He was twenty-eight years old and, prior to enlisting, was Vice-President of the John C. Gilchrist Lumber Co. He was a member of the Queen Own Rifles for several years and leaves a wife and three children. A brother, Lieut. J. Campbell Gilchrist, is with the R. A. F. in France, while another brother, Pte. S. Morgan Gilchrist, of the Mechanical Transport Department is ill at his father's home.

Elwood Burt, who has been successfully engaged in the saw mill business at Burt's Corners, N. B., left recently for British Columbia, where he has purchased a mill on the Kootenay river in the Cranbrook district. The plant is well located in a rich timber section and the output will be about ten million feet a year. Many friends will wish him every prosperity in the west. The mill at Burt's Corners will be continued under the management of Roy Burt who has been associated with it for the last two years. An extensive campaign is being carried out this winter, the firm securing permits calling for a cut next season of five million feet of lumber.

Lieut. Sydney Haskell Ball, who died from pneumonia in the General Hospital at Dannes, France, was, prior to enlistment, a director and secretary of the James Shearer Co., Ltd., lumber dealers, Montreal.

Fred Macfarlane, president of R. Macfarlane & Co., Ltd., lumber dealers, Montreal, has been unwell for some little time, and has been in the Royal Victoria Hospital, Montreal.

George Taylor, manager of the Holt Timber Co., of Bolger Bridge, Ont., who underwent an operation in a hospital in Boston, Mass., a few weeks ago, has completely regained his health. His many friends in the lumber industry are pleased to see him around again looking as well and vigorous as ever.

John McGibbon, lumber merchant of Sarnia, Ont., recently received word that his only son, John Haining McGibbon, was wounded in the right shoulder by shrapnel, during the late offensive in France. He enlisted a year and a half ago, at the age of nineteen, with the 63rd Battery, and was transferred to the 64th at Guelph, Ont., and crossed to England in November last. He was at Witley Camp for some time, and was drafted to cross to France in April last. After matriculating at Sarnia Collegiate Institute and taking his diploma at the Sarnia Business College, Mr. McGibbon at once signed up for overseas service.

John McClellan, for sixty years harbormaster at Port Bowmanville, and for forty years senior member of the firm of McClellan & Co., dealers in lumber, wood and coal, died recently in Bowmanville, Ont., aged 80 years. He is survived by his wife, two sons and two brothers. The late Mr. McClellan was a man highly respected, and during his long business career won the esteem of a wide circle of friends.

The corporate name of Greig, Morris & Blair, Limited, wholesale lumber dealers, Toronto, has been changed to Greig, Morris and Company, Limited, Mr. Blair retiring from the firm.

R. H. Campbell, chief of the Forestry Department, Ottawa, who has been in the General Hospital, Winnipeg, suffering from concussion of the brain, caused by an accident on the Hudson Bay line, is improving, and his physicians hold out every hope of his complete recovery.

Thos. Gardiner, proprietor of the Galt Lumber Company, Galt, Ont., died very suddenly at his office on September 13th. He had just reached the yard when he expired from heart failure. Mr. Gardiner was born in Scotland and came to Canada 35 years ago, and located in Toronto, where he worked in the building trade for a long period. He had lived in Galt for the past nine years. The Galt Lumber Company is the oldest retail lumber enterprise in that town. For many years it was conducted by Duncan Murray, now in British Columbia. In 1909 his interests were acquired by P. W. Gardiner, who, after running it for some time, sold out to his brother, Thomas Gardiner, whose passing will be generally regretted. Mr. Gardiner was well known and highly respected, and his funeral was attended by a large number of citizens.

Toronto Firm Opens New York Office

John Berry of the Berry Lumber Company, New York, spent a few days in Toronto recently on business. His firm have been appointed American sales agents for Terry and Gordon, Toronto, who now have extensive connections all over Canada and throughout United States. It is five years since Terry & Gordon engaged in the lumber line in Toronto, and during that period they have branched out so that they now have offices in Vancouver, Montreal and New York. The first branch was opened in March, 1915, at 405 Metropolitan Bldg., Vancouver, which is in charge of R. W. Gordon, and the next branch was located in Montreal, where F. H. Stearns & Company are the eastern agents. W. C. Thuerck of Charlton has charge of the northern Ontario operations of this enterprising firm, and the recent appointment of the Berry Lumber Company, Hudson Terminal, 30 Church Street, New York, as United States sales agents, evidences continued advancement and expansion of the splendid business that Terry & Gordon have built up during the past few years.

High Honor Conferred on Canadian

It is pleasing news to the thousands of Canadian Odd Fellows to learn that Jos. Oliver, head of the Oliver Lumber Company, Toronto, was at the recent meeting of the Sovereign Grand Lodge, I. O. O. F., held in St. Louis, elected to the exalted office of Deputy Grand Sire of the order of which he has been a prominent member all his life. The selection of Mr. Oliver for this important post means that he is directly in line for advancement to the dignified position of Grand Sire. Only once has the dignity of Grand Sire been attained by a Canadian, and that was many years ago, when Dr. C. T. Campbell of London was so honored. Mr. Oliver has held many important positions in fraternal, civic and public life. Twenty-five years ago he was elected Grand Master of the Grand Lodge of Odd Fellows for Ontario, and he has always been an energetic worker in the ranks. His new preferment will entail considerable traveling, but Mr. Oliver is not averse to taking long journeys and is never quite so happy as when visiting distant centres or riding hundreds of miles on a train. He is a prominent member in the Masonic order, the Orangemen and other bodies, and for many years was a pronounced temperance advocate. A former mayor of Toronto, he has served as school trustee and controller at different times. He is a past president of the Canadian National Exhibition, and three years ago was appointed honorary Colonel of the Canadian Militia. He has resided in Toronto since 1855 and began his self-made career as a carpenter, forcing his way upward until he became a lumberman and eventually president of the Oliver Lumber Company.

Jos. Oliver, Toronto

Ship Knees Carved from Big Tree Butts

Few people possible have ever made inquiry about, or seemed interested in what is known technically as ship-knee production, yet this is one of the most important functions of ship building.

As a matter of fact, the first piece of material required after the keel of the ship is laid is a knee for the stem of the vessel, and another for the stern, and these are expensive. For the first wooden ship built in Portland, the government paid \$5,000 for knees.

This was because there were no knees on the market and a gang of men had to be assembled and sent to the woods to search for the right kind of timber. The present price is \$1.00 per inch for knees up to 12 inches in thickness, but the large stem and stern knees, fore and aft, cost the ship builders from \$75 to \$150 each.

One of the chief industries in Maine as the result of the government's ship building activities in the production of ship knees. Several contractors send gangs of men out into the fir forests where they carve ship knees from the butts of the big trees, and some of which are not so very large.

The best material for ship knees is near the bottom of the tree, often the roots forming the curved surface necessary. At the present time it is said enough knees are produced to supply the demand for a ship a day.

Investigate All Alien Inquiries

How Canadian Wholesale Lumber Firm Learned Some Startling Facts Arising out of Courteous Business Letter

The tentacles of the German octopus, in view of the terrible fate which is inevitably awaiting the Hun, are apparently being extended in a covert manner to secure supplies for that disrupted country, with a view to re-establishing market facilities and trade connections with other nations after the war. Negotiations along this line are not being conducted in the open, but in a clandestine manner and under various guises, such as the adherents of that land have developed in their world-wide espionage system.

All of which leads up to an interesting story. Some time ago a leading wholesale lumber firm in the Dominion received a communication from another organization engaged in the same line in a certain European country. The writers stated that this particular Canadian concern had been very favorably recommended to them as a live and aggressive organization. As things were looking brighter in the cause of the Allies, and as there was a strong probability that the timber trade of the continent would become active at no distant date, would the Canadian lumber merchants in question give them full information as to the lines which they handled, what quantities they could supply, what terms they would sell on, commission, etc. The foreign firm also asked to be appointed exclusive selling agents in Europe for the Canadian lumber house. It was understood subsequently that the foreign firm were to undertake all sales on commission, the customer being invoiced direct.

After due consideration a reply was sent to the enquirers to the effect that the Canadian concern could not see their way clear to appoint the foreign corporation exclusive agents. In the days before the war they had done business with certain representatives in important English and Scotch centres, and they did not wish, in view of the past connections, to trench upon the ground of these agents. The Canadians also asked for prices abroad before the war and at the present time, the grades, quantities, specifications, terms of payment, etc., which the enquirers might desire.

In due course there came back a letter from the ———— firm, stating that as the Canadian wholesale and manufacturing company had not seen fit to appoint them exclusive agents they were very much disappointed. The tone of their letter was one of regret, yet they did not consider it necessary to answer all the queries respecting prices, grades, sizes, etc.

Here matters might have ended, but the overseas organization proceeded to ask many other questions along certain lines, evidently hoping to get satisfactory replies to the same, although they had been denied exclusive selling rights. Before dealing definitely with this communication and thinking that there might be something beneath the surface of things, the Canadian merchants took the precaution of writing to the Trade and Commerce Department at Ottawa, asking if they knew anything about the foreign agents in question, their standing, etc. An answer was soon forthcoming to the effect that this particular house had been found trading with the enemy, and had secretly been establishing relations with several German firms.

Needless to say the negotiations were quickly dropped by the Canadian wholesalers, who think it might be well for others to refer all foreign enquiries—except those from reputable houses in Allied countries—to the Department of Trade and Commerce, Ottawa, before proceeding to enter into final business relations for after-the-war timber trade. It is just possible that some of these foreign concerns may be acting stealthily and incisively at the instigation of German merchants who are taking this underhand route to re-establish timber trade and place the depleted fortunes of the country on some sort of a footing ere the terms of the Allies have been agreed to and peace duly signed in the city of Berlin.

Not Difficult to Sell Flooring

One leading lumber association is sending out some bright and helpful pointers on the selling of hardwood flooring. Certain timely and instructive statements are made driving home not a few truths respecting the merits, economy, durability and quality of a particular brand. Here is a copy of a recent advertisement:—

There seems to be a rather general misunderstanding of the hardwood flooring proposition throughout the country.

It is probably due to the average laymen's ignorance regarding the amount of flooring needed to lay a certain sized space and as to the cost of same. The idea seems to be prevalent that oak flooring is too expensive for ordinary use. Such a conception is certainly a very grievous error.

There is no other one item in the building material field which may be purchased at so fair a figure as hardwood flooring.

The cost of laying an ordinary room with this superior covering is, including carpenter's charges, material charges and finishing, but

little if any more than the cost of a fair carpet which would be required to cover the old style unsightly pine floor.

The added convenience, the increased sanitation and the greatly enhanced value of a property are three good reasons why lumber dealers should preach hardwood flooring to their customers.

The fall and winter season offers a splendid opportunity for replacement of floors in old dwellings and other buildings. Oak flooring while never difficult to lay, goes down better in the winter time than in any other season.

Of course, it is very important that the dealer in recommending and selling hardwood flooring sees to it that his customer gets the best in its grade.

Build Thirty Ships in Quebec

T. M. Kirkwood Outlines his Plan to Make the Ancient Capital one of Greatest Shipping Centres in America

At a recent meeting of the Quebec Board of Trade, T. M. Kirkwood of Toronto and Three Rivers, submitted a memorial with respect to the building and operation of wooden ships in Quebec city during and after the war. Mr. Kirkwood proposes to build thirty wooden steam ships of five thousand tons each carrying capacity, the work to be done in Quebec or the vicinity. In the course of his memorial he pointed out that the port of Quebec offers exceptional advantages for wooden shipbuilding, as has been proved by the building of eight large wooden steamships during the present year, and it has been found possible to bring the larger timber from British Columbia by rail, to supplement the local timber used in building these vessels. The local harbor is of the best and much cheaper than in Vancouver.

This programme, I estimate, would involve an expenditure of thirty million dollars, in building the ships, docks and elevators.

How is this to be raised?

The parties most interested are the Dominion Government, the wheat-growing Province of Manitoba, Saskatchewan and Alberta, the Province of Quebec and the Maritime Provinces of Nova Scotia and New Brunswick.

The Dominion Government is interested in providing a constant stream of freight for the Government railways, in favoring trade by Canadian ports, and in removing the disgrace of seeing two-thirds of our trade diverted to United States seaports.

The Prairie Provinces are interested in saving three cents per bushel in the cost of sending their grain to market.

Quebec, Nova Scotia and New Brunswick are interested in getting the ships to their seaports and in reviving their shipbuilding and ship-owning industries.

It should be possible to have these different interests share in guaranteeing the securities of a company to carry this out.

This may appear to be a rather ambitious project, involving much money, but I would ask your Board to remember that the question is of the greatest magnitude, because it means:

1st. The revival of the shipbuilding industry which was once the great industry of your city.

2nd. It will give Canada a share of the carrying trade of the world by owning and navigating our own ships as we did forty years ago.

3rd. It will give Quebec a chance to profit by the wonderful opportunity it now has for the first time, to get a share of the trade of the new West, because you now have a new Bridge which extends that advantage to Halifax. Advantages which are now useless to you without steamships and elevators on a large scale.

4. It will remove the disgrace to the whole of Canada of having lost two-thirds of our trade to United States seaports.

After Mr. Kirkwood had outlined his proposal, the Council of the Board of Trade unanimously adopted a resolution which will be sent to the various provinces interested, the Dominion Government, the Western Grain Growers' Association and other important bodies.

That if the views of Mr. Kirkwood can be realized, his project would do much to make permanent in Canada the industry of building wooden vessels, which, he says, now gives employment to 7,000 men, and which was at one time one of Canada's greatest industries, would restore to Canada a share of the ocean carrying trade of the world, of which we once enjoyed so large a proportion, a share which it may be impossible for us to obtain by building steel vessels, owing to the limited supply of steel likely to be available for some years to come, would help to replace the six million tons of British shipping which have been destroyed by submarines and would remedy the alarming diversion of our western trade to the United States seaports, which has taken place during the last few years, and would thus help to solve the problem of employment for our people after the war, which is now causing so much anxiety.

That, without expressing any opinion as to the details of the project the Council of the Quebec Board of Trade is of opinion that it merits careful consideration on the part of the authorities interested.

Shipbuilding News From All Over Dominion

Splendid Development of the Great Industry and Wide Extension of Operations— Numerous Successful Launchings—Seamen Are Scarce

The War Taurus was recently launched in Toronto. She is the thirteenth vessel built by the Polson Shipbuilding Company and is of the standard size, being 261 feet long, 43 ft. 6 in. in width, with a depth of 23 feet.

The property of the Three Rivers Shipyards, Ltd., has been acquired by an American syndicate. A contract for wooden vessels for the French Government has been secured.

No time is to be lost in the construction of the five wooden steamers for the French government to be built at the Popular Island yard by the New Westminster Construction & Engineering, Ltd. The keel timbers are already coming in, blocks are being got ready, and the first keel has been laid. All five vessels are to be completed in ten months. Four berths will be used, and the frames of the fifth vessel will be cut, so that practically speaking the yard will be working on all five simultaneously.

Canada has again smashed all records for speed in wooden shipbuilding. The latest feat has lowered this country's own mark by about 60 per cent. The "War Camehin," a wooden ship of 3,100 tons, built for the Imperial Munition Board, was launched by the Foundation Company Ship Yards at Victoria on August 31. Installation of machinery commenced at the Imperial Munitions Board's installation plant at Victoria on September 3. The installation work was completed in 12½ working days. On September 17 a successful sea-going trip was held. This vessel will commence loading cargo within seven days of the trial trip. The previous record in Canada was held in Quebec.

Senator Curry, of the Canadian Car and Foundry company, has written Mayor Murphy at Fort William that his company is now arranging to sign contracts for the construction at the Fort William plant of 25 trawlers for the United States government. The senator states that Mr. Butler and Mr. Parks, chief officials of the company are now in Washington to sign these contracts. These trawlers will be larger than those now being built for the French naval commission.

The tern schooners Meredith A. White and Vincent A. White, which were launched a few weeks ago from the shipyard of C. T. White & Son, Limited, at Alma, New Brunswick, have been sold to Adam B. MacKay and J. H. Solery of Hamilton, Ont. The vessels were built from the same model and register 452 tons each. They are registered at Parrsboro, N.S., and were transferred to their new owners last week. Their builders have another schooner in their yard at Alma and will launch her this season.

A shipment of spars from the Pacific Coast reached Parrsboro, N.S., recently, and another lot arrived last Saturday. This makes at least eight importations of spars from the Coast this year, besides a considerable quantity of square timber. The tern schooner, Scotia Belle, which was launched at Meteghan, Digby County, last week, was a sufferer from German submarine activities before she was afloat. Her launching was delayed for some time on account of the fact that three successive shipments to Halifax of her chains and patent anchors from the English makers fell a prey to the operations of the U-boats. Fortunately the fourth shipment arrived safely and the vessel was made ready for sea. The Scotia Belle registers 345 tons, is classed for twelve years in Bureau Veritas, has all the modern improvements and is fitted with an eight horsepower gasoline engine for hoisting. She has been purchased by the French Government.

The sawmill at Alma of C. T. White & Son of Sussex, N.B., and Apple River, N.S., was destroyed by fire last Saturday with all its contents. The mill was situated in the shipyard, but the schooner now being constructed there was uninjured, although a large quantity of shiptimber was burned with the mill. The total loss is estimated at \$35,000, and there was no insurance.

Seamen appear to be getting scarcer all the time in the Maritime provinces and wages are advancing accordingly. Mates of tern schooners now get \$150 per month; cooks command \$125 and \$130, and it is a very poor sailor who cannot count on getting \$100 for every month he is on articles. Even with these wages—fully three times as much as they were five years ago—it is extremely difficult to get crews, especially for "off shore" voyages, and vessels are frequently held in port for several days while sailors are being induced to ship.

America now is leading the world in ship production, according to a recent despatch from Washington. Comparison of figures on de-

liveries announced by the Shipping Board with unofficial figures on the output of yards in the United Kingdom, show that plants in this country have delivered 1,636,403 deadweight tons since January 1, while British yards have turned out 1,545,826. American yards began to take the lead over those in the United Kingdom two months ago, but it was not certain then whether this was not a mere temporary advantage. In August, however, yards in the United States increased their lead, delivering 323,650 deadweight tons compared with 187,019 deadweight tons for the United Kingdom.

The Port Arthur Shipbuilding Company has been allocated the construction of two more full canal-sized freighters by the Dominion Government, delivery to be made in the Spring of 1919. "This will keep us busy right through the Winter," said General Manager Page. The boats will each have a capacity of 3,400 tons. The Dominion Government has placed contracts for seven new boats in various shipyards, and of these Port Arthur has obtained two.

The Dominion Government, Department Public Works, have awarded sub-contracts for a dry dock and ship repairing plant at St. John, N.B., Courtenay Bay. The Secretary is R. C. Desrochers, Ottawa, and the general contractors are the St. John Drydock & Shipbuilding Company.

The handsome new tern schooner Mollie and Melba, which was turned out at Grosses Coques, Digby, County Nova Scotia, was recently launched. The vessel was built by Capt. Amos Blinn for J. E. Gaskell, of Grand Manan. The Mollie and Melba measures 155 feet over all, 34 feet beam, 12 feet 6 in ches depth and registers 388 tons. She is well constructed in every particular, planked with hardwood. The cabins are superbly finished in hardwood and spruce, beautifully stained and polished, and are equipped with every modern convenience.

The wooden steamer Tanoo, the sixth and last hull to be built by the Western Canada shipyards for the Imperial Munitions Board, was launched recently at False Creek, B.C.

The second of the standard wooden steamships being built by the Quebec Shipbuilding and Repair Company on the St. Charles River site of the Louise embankment, Quebec, was recently launched. The new vessel is a sister ship to the War Quebec, which was launched recently at Poplar Island shipyard.

The four masted schooner Margaret Dick was launched at Hantsport, N.S., recently. She was built by Foley & Fanquier, and is of 1,050 tons. Her length over all is 224 feet, width 39 ft. 6 in., keel 179 feet and depth 18 feet. She is a yacht line model designed by R. Huntley of Parrsboro. Her masts are 96 feet high, with 50 ft. top mast, all being beautiful specimens of timber. Most of the lumber of which the Margaret Dick was built came from the Pacific Coast.

The 2,800 ton freighter War Fundy was successfully launched at Grant & Horne shipyards, St. John, N.B.

The Port Arthur Shipbuilding Company, Port Arthur, Ont., received a contract for the construction of two canal sie freighters for the Dominion Government, each to have a capacity of 3,460 tons.

The War Matane, the fourth standard wooden ship built by Quinlan and Robertson, at their yards on the St. Charles river, Quebec, was recently launched. She is a 3,000-ton steamer, measuring 261 feet, and her keel was laid on May 15 last.

Four buildings at the Halifax Drydock and Shipyards were destroyed recently. They included the dock pumping-house, the boiler-house, air compressor structure, and the old machine shop.

Pacific Coast shipbuilders working on Government contracts are seeking a revised schedule of prices from the Minister of Marine in view of the increased wage rates allowed on the Pacific Coast since the original contracts were entered into. The United States Government has fixed wages for shipbuilders at Seattle and other points on the coast and these new rates are higher than the rates allowed at Vancouver, Victoria or other Canadian shipbuilding centres on the Pacific.

The Mapleland was recently launched at Annapolis Royal, N.S. A change was made in the three-master, by which she becomes a twin screw steamer of the most modern type besides having her regular schooner sail power. The screws fitted are of three blades each, 42 inches diameter and driven by twin crude oil engines of the Diessel type and of 100 horse power each, giving a speed independent of sail power of upwards of seven knots. In addition to the propulsion en-

gines she has a 10 h.p. gasoline engine for hoisting sails, anchors, cargo, etc.

Twelve working days was all that was required to outfit the wooden steamer War Camchin at the Ogden Point Assembly Plant. This is a record as far as I.M.B. vessels are concerned on the coast. The vessel was launched from the yards of the Foundation Company at Victoria on August 31, and it is expected that she will be ready for her trials very shortly. The work of outfitting the vessel was greatly facilitated by the installation of the greater part of the engine-bed fittings and auxiliary machinery before the vessel left the ways. Eight ships are now moored alongside the assembly plant wharf and about 800 men are employed. It is fully expected that by the end of the year the entire fleet of twenty-seven vessels will be sailing the seas.

Making Canadian Woodmen Feel at Home

How the Y. M. C. A. Work is Being Carried Out in the Forestry Camps in Great Britain

The most widely advertised firm is not necessarily the one giving the greatest service, and one often finds unpretentious, little known establishments exercising wide influence. This is true of the Y. M. C. A. activities in the Forestry camps in Great Britain; and no adequate idea of the importance of the work can be acquired without making a tour of inspection, for one has to spend hours talking with those who are served, and with those who serve, and see the work in actual operation.

Throughout England and Scotland there are scattered forty Companies of Canadian Foresters, who are working among the Bri-

Sawmill of Canadian Forestry Corps at Ampthill, Bedfordshire, Eng.

tish woods, getting out timber for military purposes. Naturally most of these woods are in lonely places, and very often the camps are seven to ten miles from the nearest town or village, so that work is carried on under conditions of loneliness and hardship. Realizing its own responsibility and the tremendous needs of these Canadian Foresters, the Y. M. C. A. has tackled the problem of providing social, religious and education attractions for these men; and now operates huts in the thirty-eight forestry units.

The main thing, of course, is to get a hut built, but where this is impossible, and if local conditions permit, a hall or village church is secured, or a marquee erected. These places are made very home-like with bright decorations, pretty curtains, pictures, easy chairs, library, piano, billiard table and folding tables for writing purposes. A refreshment room is also provided where, at practically cost price, men can purchase light refreshments, after working hours and before going to bed. The huts vary in size, ranging from 74 ft. 35 ft. to 24 ft. x 18 ft.

Each hut is in charge of a sergeant, who, single-handed, assumes the responsibility for the running of the huts. He is prepared to do everything, from cleaning the floor to taking charge of a religious service. He organizes concerts, entertainments, lectures, socials, dances and whist drives. The boys entrust to his care their valuables, and seek his assistance in a thousand and one ways; may be to write a letter home, or purchase something which they may need in the nearest village. Quite a lot of the little duties may seem trivial, but they are the small things which count very largely in military life, and were it not for the Y. M. C. A. much discomfort, not apparent to those outside army conditions, would have to be endured. The sergeant seeks to make his hut a home for the boys, where they can relax and be comfortable after the day's arduous

work, and the many expressions of appreciation from the boys, themselves, show that this end is very largely attained.

The companies being scattered over an area of 2,500 square miles, demand a great deal of personal supervision, and the whole system centres in the Forestry Department of the London Headquarters. The supervisors are constantly travelling around the various camps, encouraging and advising the leaders, and helping them to surmount the little difficulties which are constantly cropping up.

The whole policy of the Y. M. C. A. in the Forestry Corps is settled by Headquarters on the supervisor's report, and practically the same scheme is in force in every camp, so that the most isolated forestry unit receives as much attention as those near to a town. In view of the fact that these camps are so isolated, and the units so small the work was commenced with much diffidence, and the success has been greater than the originators could foresee, so that when the records are compiled it will be found that the forestry work of the Y. M. C. A., far from being insignificant, is by no means the least influential of the many activities of the Canadian Y. M. C. A.

Newsy Briefs from Maritime Provinces

A wood committee of the International Paper Company, consisting of George F. Underwood, a wood expert known all over the continent; J. P. Riley and Col. W. E. Haskell, well known in the paper industry, arrived in St. John a few days ago having concluded a trip through New York, the northern New England States and the provinces of Ontario, Quebec and New Brunswick where they were investigating the trees for pulp wood supply.

In conversation with a representative of the "Canada Lumberman" Mr. Haskell said that the embargo on all wood shipments, with the exception of shooks and barrel staves, ordered by the regional director of the national railroad administration, had threatened to interfere with the operations of paper mills and to aggravate what has been a serious problem. However, he added, it had been arranged that shipments of wood when it was to be used for paper making, would be allowed to go through if accompanied by a written explanation of the destination and the purpose for which it is to be used.

Cecil Matheson, son of William Matheson, manager of the Fraser Lumber Company of Edmundston, N.B., has left for St. John's, Quebec, where he will join an Engineering Battalion. He is a graduate of the University of New Brunswick and has qualified as a civil engineer.

Hon. E. A. Smith, minister of lands and mines in the Province of New Brunswick, when interviewed recently by a correspondent of the "Canada Lumberman" said that the men of the forestry service had all been selected and their appointments approved. He said that the government wanted to be absolutely fair to the lumbermen and at the same time to be fair to the people of the province. The object, he said, is to scale 100 per cent. of the cut, which had not been done before and an effort will be made to attain this objective.

A saw mill owned by Taylor & White, which was situated at White Head, King's County N. B. was burned to the ground a few days ago and the entire plant was a total loss. The origin of the fire was a mystery. The mill and the machinery were not covered by any insurance and the loss to the owners was a heavy one. The firm are making plans for rebuilding the structure.

Elwood Burt, of Burt's Corners, Fredericton, N. B., recently went west, where he will commence operations on a tract of land acquired by him in Kootenay district of British Columbia. He took with him a crew of thirty experienced mill men and lumbermen. During his absence his son Roy will carry on operations of the E. Burt Lumber Company at Burt's Corner, N. B.

How Pulpwood Costs Have Ascended

At the resumption of the investigation into news print prices by Commissioner Pringle, some interesting facts were revealed by the auditors in their reports. The examination of the records of the Spanish River Pulp and Paper Mills showed that the new wage award added \$3.44 per ton, and the increase in freights on incoming materials was 96c per ton. Pulpwood costs increased \$2.43 per cord, and as 1½ cords of wood were used per ton, this increase would amount to \$3.64, making a total advance of \$8.04 per ton in producing news print paper.

For the Laurentide Company, the increase in wages added about \$2 per ton and pulpwood costs advanced \$3.67 per cord. Other figures showed that in the St. Maurice Pulp & Paper Company the increase in wages amounted to \$3 per ton, and the freight rate on material \$1.75 per ton.

It is declared that this was the largest tree marketed from the eastern Kentucky fields within half a century. It was so large that for a number of years the task of marketing it was a serious obstacle, there being few lumbermen who cared to try to cut it down.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Spruce Wanted

Mill Cull Spruce, 1 in. and $\frac{3}{4}$ in., apply the Elgie & Jarvis Lumber Co., Ltd., Toronto.

WANTED 1 in. Cull Hardwood, Beech and Birch. 1 in. No. 1 and No. 2 Pine Culls. State price and point of shipment.

The Hamilton Lumber & Coal Co., Limited, 19-20 Hamilton, Ont.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Cedar Wanted

Good Eastern Cedar, suitable for boat building. Peterborough Canoe Company, Ltd., 15-2 Peterborough, Ontario.

Wanted For Cash

1 in. No. 1 and 2 Spruce, No. 4 and 5 Pine Boards. When replying quote prices f.o.b. Chicago.

John I. Shafer Hardwood Company, 19-19 South Bend, Indiana.

Birch Wanted

Wanted to purchase 100,000 feet first class Birch, 1 in. x 8 in. in lengths 6, 8 and 9 feet or multiples thereof. Please give full particulars in first letter. Box 775, Canada Lumberman, Toronto, Ont. 16-19

For Sale-Lumber

Peeled Pulpwood, Spruce and Balsam

FOR SALE—One thousand cords 4 ft. peeled pulpwood, spruce and balsam. Could start shipping immediately. Wood piled near railway west of Campbellton, N.B. Address, Box 789, Canada Lumberman, Toronto, Ont. 19-20

Maple For Sale

60 M ft. Maple, 1 $\frac{1}{4}$ in. x 3 $\frac{1}{4}$ in. x 18 in. up to 72 in. long; practically clear stock, 50 per cent. white maple; a good percentage quarter cut. For further particulars, apply Box 777, Canada Lumberman, Toronto, Ont. 19-t.f.

Lumber For Sale

Two cars 4 x 4 Maple Boxed Hearts.
One car 5 x 5 Maple Boxed Hearts.
One car 6 x 6 Maple Boxed Hearts.
Seven cars Fir Doors.
Three cars Fir Columns.

GEO. C. GOODFELLOW,

Montreal, Que.

If you are looking for any—

Birch saw logs,
Cedar fence posts,
Green birch wood any length,
Mixed wood any length,

Write to Box 702, North Bay, Ont. 18-21

For Sale

Right to cut Pine and Birch on the following timber limits:—

Berth No. 4 McCraney, 11 $\frac{1}{4}$ sq. miles.
Berth No. 6 McCraney, 15 sq. miles.

For further particulars apply

BANK OF MONTREAL,

16-23 Hamilton, Ont.

FOR SALE

2 cars 1 x 4—8/16 M. R. Jack Pine and Spruce
1 car 1 x 6—8/16 M. R. Jack Pine and Spruce
1 car 1 x 8—8/16 M. R. Jack Pine and Spruce
1 car 1 x 10 & 12 M. R. Jack Pine and Spruce
5 cars 2 x 6 M. R. Jack Pine and Spruce
2 cars 2 x 8 M. R. Jack Pine and Spruce
2 cars 2 x 10 & 12 M. R. Jack Pine and Spruce
1 car 4 x 6 M. R. Jack Pine and Spruce
2 cars 6 x 6 and up M. R. Jack Pine and Spruce
2 cars 1 x 4 M. C. Jack Pine and Spruce
3 cars 1 x 4 & up M. C. Jack Pine and Spruce

Address,

NORTHERN LUMBER MILLS, LTD.,

18-21 North Cobalt, Ont.

For Sale-Machinery

For Sale

1—17 x 24 Atlas Engine, with 36 in. x 10 ft. flywheel.
3—No. 94 Berlin Matchers, 15 in., fitted with hard steel knives on top and bottom cylinders—one pair shiplap, jointer and flooring heads with bits for each machine.
1—No. 182 Berlin Double Surfacers, 30 in. x 6 in.
1—No. 199 Berlin Buzz Planer.
1—No. 290 Berlin Picket Header.
The Otis Staples Lumber Company, Ltd., 19-t.f. Wychliffe, B.C.

FOR SALE

Partial List

Matchers—American No. 77 High Speed Pay & Egan, No. 333 High Speed Berlin High Speed with Resaw, McGregor-Gourlay "YH", also "QY", Berlin No. 44. American 16 in. x 30 in. Sizer.

Resaws—Berlin No. 289 and 341, 54 in. C. M. C. No. 708, and Cowan No. 76, 48 in. Berlin Horizontal Hopper Feed Diamond Slab, also Giddings.

Also 12 in. and 8 in. Moulders, Band and Circular Rips, Diamond and Mitts and Merrill Hogs, Mereen Squeezer and Ferris Wheel Trimmer, Sawmill Machinery and Supplies, Steam Engine and Boilers, etc. Refuse Burner, 40 ft. and 70 ft.

Review of Current Trade Conditions

Ontario

The topic that has been most discussed in general lumber circles during the past few days, has been the embargo placed against all shipments of forest products, except shooks, staves, hoops, headings and manufactured containers from all points in the United States and Canada, to destinations east of the Mississippi River. Now, according to official orders, no products of the forest can be despatched to embargoed destinations without the issuance of a permit by the Car Service Section of the United States Railroad Administration or by the Freight Traffic Committee, without the presentations by consignees, of evidence which justifies transportation services. It was announced that shipments in transit at the time the embargo became effective, would be accepted, but all shipments now made, with the exception for military, naval, car and locomotive works must be accompanied by a permit, which shall not be given except from a point at which the shipment actually originates, and its final destination. The reconsignments of shipments moving under such permits is prohibited.

Needless to add that such a procedure will entail considerable delay on the part of Canadian shippers dealing with U. S. commercial firms. The action taken by the Car Service Section was entirely unlooked for. It is hoped that the measure is only temporary in character and that no further restrictions will be placed in the way of the distribution of lumber. The views of the local wholesale trade are reflected more generally in another column containing the report of the monthly meeting of the Wholesale Lumber Dealers' Association, which will be read with interest.

In a letter to the members of the Canadian Lumbermen's Association, Secretary Frank Hawkins of Ottawa says:

It will be necessary therefore, for your buyers in the United States in placing an order with you, to also furnish a license authorizing the import of lumber into the United States for commercial use. This license will be surrendered by the shipper when the bill of lading is signed by the railway company. It is our understanding that this embargo does not affect lumber shipped for United States Government use.

The prospect of woods labor and the extent of logging operations during the coming season are now engaging the attention of various lumber concerns, and it is interesting to note the trend of affairs.

There is not much change in market conditions generally. Although building is taking on some activity, there has been considerable drawback to operations owing to the wet, rainy September. In some of the northern towns it has rained almost every day.

Word received from the Keewatin Lumber Co. of Keewatin, Ontario, states that this year they will saw only about eighty per cent. of their normal output. They ran their plants night and day during the early part of the season, but were forced to close down nights a few weeks ago. They are having no trouble in getting sufficient labor for the day shift. With respect to lumber prices the company state they believe that they will be well maintained during 1919, as production will likely fall off to a very large extent. They do not expect to carry on more than fifty per cent. of their normal work in the woods during the coming season, which is accounted for by the uncertain labor conditions and advanced costs of maintenance.

In conversation with a representative of the Holt Timber Co., he stated that they hoped to operate six camps this season at Bolger Bridge, Ontario, if the men could be secured. The average rate of wages was from fifty-five to sixty-five dollars a month. The camps would average from seventy to eighty men, and probably about ten million feet of white pine, hemlock, spruce and some hardwood would be taken out. The prospect of securing labor was fair, but it was a little early yet to size up the situation accurately. Water in the streams during the past season had been low, which made driving difficult, while the expense of maintenance had been increasing rapidly.

Austin and Nicholson, of Chappleau, state they are endeavoring to operate three log camps and six tie camps during the coming winter, and that it will take about six hundred and fifty men to man them to one hundred per cent efficiency. At present the firm are running on a sixty per cent. basis. Mr. Nicholson states that wages are up one hundred per cent above pre-war level, and supplies from one hundred and twenty-five to two hundred and twenty-five per cent. On the average the increase is around one hundred and forty per cent.

Speaking of pulp wood conditions he adds that the cut this season will be very much reduced owing to the excessive cost. With regard

to the advance on quotations for spruce wood since the outbreak of European hostilities, his opinion is that it is, at least, one hundred per cent. He bases his conclusions entirely on the cost of operating, and says that the only thing, which has remained stationary, is the stumpage. It may be that the people taking out wood are working on a somewhat closer margin, but the cost of production is one hundred and twenty-five per cent higher than normal.

There has been no marked change in the general situation during the past few weeks, and stocks are not moving any too rapidly. The principal feature of the situation is a large amount of B. C. No. 2 common boards which are selling, delivered in the east, from \$31 to \$34. No. 2 shiplap, which has also been bringing the same figure, is moving quite freely. There has been considerable doing in B. C. timbers during the past few days, and, on the whole, western stocks have found quite an active demand, owing to the falling off in requests from the prairie provinces, and the desire to find an outlet for the output of B. C. mills, not only those on the Coast, but in the mountain districts as well.

United States

The embargo situation has been the topic uppermost in the minds of the lumber trade during the past few days, whereby it is necessary that shipments should move under permits. It is said that the purpose of the new order of the War Service Section of the U. S. Railroad Administration is to control and regulate this important traffic and avoid the congestion in distribution, regarding which both American and Canadian firms have such painful memories. A recent despatch from Washington explains the object of the embargo by saying that it will not interfere with any legitimate shipments of lumber and forest products. Some lumbermen are inclined to think the new order will further curtail the activities of wholesalers but not all are agreed on this point. Where a wholesaler has a stock of lumber, or has orders for delivery to specified consignees, it was pointed out, he will have the same right to ask for permits as any other lumber shipper. Last year an attempt was made to enforce such an embargo. It was only partly successful and in its operation was more or less spasmodic. The present order, if intelligently enforced, is expected actually to control lumber shipments into the congested industrial district of the East and not to stop such shipments. The conservation of freight cars lies at the bottom of the new order. Consignees must be prepared to release cars promptly. Otherwise permits will not be granted for lumber shipments. There will be no irregularities under the new system such as occurred when shipments were falsely consigned to Government officials when intended solely for private consumption. Government departments must confirm Government orders.

Under this system there will be no reconsignments in transit. It is this feature that leads to the belief among some lumbermen that the new embargo order will work to the disadvantage of the wholesalers. Every shipment must be to a bona fide consignee and not to be diverted in transit. In fact, before a permit is issued the consignee must satisfy the railroad agent where delivery is to be made that he needs the lumber and is prepared to unload it promptly upon arrival.

Members of the American Hardwood Manufacturers' Association and Southern Hardwood Traffic Association handling approximately 250,000 cars annually, sent a message to Director General McAdoo at Washington, which summed up the situation, as follows:

With reference to embargo against shipments of commercial lumber to consuming territory east of the Mississippi and north of the Ohio and Potomac rivers:

We have received no previous notice of this drastic action. Hundreds of empty cars are now on side tracks awaiting load. The results of this order will be to slow up car efficiency and retard this month's railroad earnings. Already we have had word that certain railroads construe order as placing lumber in the nonessential class and decline to give cars for loading hardwood logs into mills.

Hardwood operations are entirely different from pine and the two industries should neither be connected nor confused. The feeling of many members is that if shipments can not move Liberty loan subscriptions will be restricted.

Approximately 75 per cent of product of hardwood logs goes directly or indirectly into essential war work. We feel that it will take, at least, fifteen days for the committees which you designate to work out method of issuing permits, as we can not find as yet where the committees have been appointed.

Sawmills are largely located in isolated sections and if loading stops labor will disperse and be very difficult to get together again.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

Therefore, in order to avoid confusion and to expedite the handling of hardwood lumber, to gain car efficiency and to protect the labor situation, can not effective date be postponed until Oct. 15?

Commentive upon the new system of permits by which the greater share of commercial building construction in the United States will be controlled, the "American Lumberman" says: "The far-reaching effect of this new order is only just beginning to sink into the consciousness of lumbermen and the public generally. It was stated as not applying to construction already under substantial progress, but the State council of Illinois, in the announcement it issues, states that it applies to work already in progress unless priority orders have been secured.

Under this system if a farmer finds himself in need of additional storage for his crop of wheat or other farm products or housing for live stock, it will be necessary to apply to the State council of defense for its sanction of the needed improvement (unless it can be arranged as an addition to an existing structure). If that body is favorable it will refer the matter to the nonwar construction bureau and if it also approves it will forward the application with its recommendation to the nonwar construction section of the priorities division of the War Industries Board, the permit will be issued if issued at all; and with this permit the farmer can go to the local lumber dealer and secure the material, if it is in stock. Just how long this process will take does not appear at this time, but it can not be expected that it will be a very expeditious proceeding. It is not to be expected either that a very liberal view will be taken in the granting of permits. The effort probably will be to restrict construction to projects which can be proved to be actually necessary, not only to the citizen and the community but to the nation as a whole. The national consciousness is growing to a point where the sacrifice of the individual or the community for the common good becomes, where necessary, a mere routine step.

Great Britain

Much criticism is still heard with respect to the rationing scheme. This is directed not so much to the principle at stake as to the methods adopted. The trade, as a whole, are in thorough sympathy that the war should be won, but it is felt there must be some amendments and adjustments to the new measure before its many objectionable features are eliminated. After the war the trade will be called upon to undertake, in a large way, the work of reconstruction, and to take its place among the forces that will be required to exert energy and life. It is urgent that it should not be crippled now by hampering cir-

cumstances, and that rationing should be on a most generous scale compatible with national exigencies. Speaking of the situation a leading trade paper says in part: State buying for State departments should be confined narrowly, and the assistance of the trade should be obtained in distributing wood supplies in such cases whenever possible. This is not a plea for the trade to be placed in an advantageous position at the expense of the community. Already it has been laid under restrictions which impose heavy financial burdens on its members, which have been imposed for the welfare of the State, and it is but just that the force of the blow should be softened if at all possible. As regards the details of the Order it is a welcome sign that the Controller has so far dealt with many knotty points in an accommodating spirit and one that augurs well for his future relations with the trade. If the rationing scale and the limitation of state trading are dealt with in the same broad spirit the voices of the critics will be heard less.

Trading locally has not been at all active recently. It takes time for the rationed supplies to become available for sale owing to the formalities to be gone through, and the fact that the formalities have not in every case been completed has delayed business. The difficulty is of course only temporary, and will disappear as the scheme gets working.

There has been no lack of arrivals of American hardwoods for direct Government account, but few other parcels have been reported. An item of interest is the issue of a list of offerings, comprising several carloads of oak and gum lumber stored in yards by a firm of shippers' agents. These goods are offered subject of course to the Controller authorizing sales. The price required is in the neighborhood of 16s. per cube foot. If the requisite permits are issued the stock will find plenty of buyers in the prevailing shortage of supplies.

In general, spot business as regards imported woods has been weak, and no disposition is in evidence on the part of holders of stocks to force sales. The situation in which the hardwood operator is now placed does not favor the developments of any special activity. The business is hampered by the state of uncertainty that exists as to its future. No further pronouncement has yet been made by the Controller, although one is expected shortly, and is necessary to define with greater precision than at present exists the trading position, both present and future, of the operator in foreign hardwoods. Until information of this kind is made public, the prevailing state of lethargy may be expected to continue. Manufacturers of war material, as usual, provide the bulk of the orders being received to-day. For the time being the private consumer's purchases are relatively insignificant.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Lumbermen Take Hopeful View of Affairs

Important developments which may have a far-reaching effect to the Canadian lumber trade in general, took place in the Ottawa lumber market during the last period of September. The first was the notification to three woodworking plants making shell boxes to cease producing. The second was the operation of restrictions placed on the importation of Canadian lumber to the United States, except under special permits.

Should all, as they now stand, remain in force for any length they will have a serious effect on the Canadian export trade. The United States has for over a year been the chief market for export of lumber from Ottawa plants and mills. In fact, it has been the only big one. The lumber has chiefly gone to the north eastern and middle States.

Lumbermen who expressed a hopeful view that the restrictions would only be temporary, were of the opinion that they (the new restrictions) had been imposed with the prospect of releasing cars to handle the western grain crop. How true such a view will prove time alone will tell. Reports indicated that shipments to the United States during the first week of the operation of the embargo, were not as numerous as during the previous week or two weeks.

The decline in shell box manufacture, as ordered by the Imperial Munitions Board to the three woodworking plants, was viewed with concern by both wholesalers and retailers. It was not so much what the immediate loss of sales means to them, as being a permanent forerunner of the future. The estimated curtailment or non-manufacture of boxes in the three Ottawa plants alone was given to be between two hundred and fifty and three hundred thousand. Plants situated at Casselman, Toronto, and other places, it is understood, were also affected. The curtailment applies to the five round, 18

pounder, high explosive box. Contracts for the six inch box were not affected at Ottawa up to Sept. 23rd.

The order for cessation came quite unexpectedly to the J. A. Oliver, George M. Mason, and W. C. Edwards plants. The disruption of the staffs making these boxes followed. In the Ottawa plants between one hundred and fifty and two hundred workers were let out. A clause inserted in the contracts provides for the cessation of the work on a contract, with the Munitions Board taking over the boxes manufactured, and materials on hand which had been purchased.

From twenty to thirty per cent of the original number of boxes contracted for had been completed and delivered when the order came. Thus the prospect of making profits was swept away. As Mr. Oliver explained it, those successful in securing the contracts had already bought their supplies and arranged their organization. The early period of manufacture, due to the assembling and smooth running of the organization was the most expensive one. In the second period expenses began to compare with operating costs or perhaps take care of part of the higher cost sustained during the first period. The third or latter period was what manufacturers counted on to make their profit. The organization in this period reached the peak of its efficiency and turned out more boxes per day with a lessened cost for labor. Oliver and Son had a million feet of spruce tied up over and above the number of accepted boxes made. It meant about \$45,000 alone to this plant, exclusive of hardware required. Just how the situation would ultimately work out was a broad guess.

As to sales, both domestic and foreign, the market remained slow. Prices were firm and showed no change. A little increased activity was noticeable in building lines for local use. If the strength-

"Bears testimony to the value of Klim"

"Over there," where transportation is the big problem, and food value the great necessity, Klim has proved up in unmistakable manner. It has shown itself the one form in which the full food value and natural flavor of pasteurized separated milk can be carried thousands of miles over land and sea without deterioration. The Klim that was served to soldiers and civilians in France was as fresh and sweet as that which is being made today in our five plants here in Canada.

You'll discover, if you try Klim in your camp, that it can solve every milk problem for you. Bults small, weighs little, never spoils in any climate, no waste, cheaper, has the natural flavor unchanged.

The Friends of France

216 Poplar Plains Road, Toronto

Canadian Milk Products Limited
Toronto, Ont.

August 20th, 1918

Gentlemen:

Please accept our grateful thanks for your donation of 3 cases of Klim for French relief work. This generous gift will gladden many a heart in poor stricken France. "A true gift of Providence," is how one writer expresses the value of Klim.

The other day we received a letter from one of the doctors who is working in the front line clearing station who says that Klim is absolutely invaluable, especially for gassed men, and he says there is nothing we could send which is a greater help in their work. Klim is used in France for badly gassed and wounded soldiers, for babies, for the sick, and particularly for tubercular patients. Nearly every letter that comes to us from France, whether from refugees, soldiers, doctors, or surgeons in charge of hospitals, bears testimony to the value of Klim and brings a request for more. We feel that such remarkable unanimity of opinion proves the worth of Klim beyond any doubt.

Faithfully yours,

THE FRIENDS OF FRANCE.

(Sgd.) Mrs. A. E. Wells,

President.

Ask Us to Figure

Before placing your orders, give us an opportunity to quote you on "H. A." Brand goods—all fully guaranteed.

We have made a careful study of the camp requirements of Lumber Companies and our products, for this purpose, are specially selected, specially cured, and specially packed. We understand just what is expected of Camp Supplies—and how many handlings they must withstand before arrival at their destination.

And we ship when we promise to ship—by Refrigerator Car Service, to obviate delay.

Write us. Let us refer you to other Lumber Companies—with regard to the quality of our goods and our service.

Ask us to quote on your next requirements.

We Specialize In Camp Requirements

Save Many Dollars

H. A. Brand Oleomargarine, the wholesome new butter substitute, will save your Company many hundreds of dollars. In taste and color you cannot distinguish it from butter. It will keep as well as pasteurized Creamery Butter—better than lower grades of butter and it is always uniform in flavor.

We would advise against purchasing lower grades of Oleomargarine as being almost sure to cause dissatisfaction.

Write us direct or get in touch with our nearest branch for quotations.

Canada Food Control—Blanket No. 165

ening in these grades continues a very good business should be done in the fall and early winter months. One reason given for the activity in building lines was that the contractors had become convinced that the price of lumber, as it now is, is not likely to go lower.

The increased cost of camp supplies, help, freight rates and driving warrant the view that charges will have to increase. Reports from mills and cutters was that woods labor was very scarce. One firm said it now cost one hundred dollars per man per month in food and wages alone. The quality of labor offering to go to the woods is below the standard. Young boys and old men form the bulk of it. Camps in the Ottawa Valley will be fewer and the number of men per camp will be less than for last season's operations. Indications were that the 1918-1919 season's cut would show a further decline.

The programme of building military hospitals and discharge depots mentioned in the last report continued according to outward indications. Definite information as to its exact extent remained unavailable.

The labor situation with the woodworking plants was reported as being satisfactory. The employment of female labor did not commence. Orders in the sash and door trade continued about the same as at the beginning of the month. Lath remained slow.

P. C. Walker of Shepard and Morse, reported business being quiet. The sawmill of the company at Ottawa closed about the middle of September. Woods labor was reported scarce and prices high. Stocks showed no change and in volume were somewhat less than those carried during a corresponding period in 1917.

Gilmour and Company reported orders slow, and that no big sales had recently taken place. This company did not attempt to forecast what the late fall and early winter business would be. The cost of lumber they believed due to labor, and costs of supplies would mean an increase in the sale price of wood cut during the 1918-1919 season.

A. M. Davis, of McAuliffe-Davis, said retail business was fair, or had perhaps increased a little more than during the latter part of August. Building grades were the principal demand.

James Davidson's Sons reported little change in the general situation. The chief demand was for building gables. This plant has been working up to capacity days on shell boxes. To get out its new order of doors for shipment to South Africa, the plant ran to 11 o'clock at night for a week or more.

General Eastern Conditions Still Quiet

This has been the dullest two weeks as far as shipments of lumber from St. John are concerned that the trade has passed through in some years, and during the last week, of Sept. 16th, the Administration Board of the United States Railways have placed an embargo against all shipments of forest products into the United States. This makes a complete tie-up, and at the present writing of this article the embargo was still in effect, with no cause given of why it is placed and the public still waiting for reasons. The farmers who have their little piles of pulpwood all over the country are badly hit. Many small rotary mills cuts are tied up. These are the people of limited means depending on the moving of such stock for a livelihood, and many will be ruined if this state of things goes along very much further. Should it continue, the interior of the Province will suffer this winter, as many parties earn their livelihood by working in the woods cutting logs, lumber or pulpwood. Prices for long timber are unknown, as no buyers seem to wish to take any risks and are not disposed to even chance quotations; certainly no prices being offered at the present time will bring a profit to the shipper.

The cost of logging is going to be much higher than a year ago, not so much from the standpoint of supplies, which are only from 5 to 10 per cent. higher, but wages, which have jumped to abnormal heights. The scarcity and quality of labor is making it very inefficient and about as careless as possible; therefore, the jobber, who goes into get out logs by the thousand is asking very high prices, and companies who will run their own camps are bound to have a very expensive log. Certainly no cheap lumber will be produced in 1919, if any. Operators who have large mills and organizations in this section of the country are entering the woods, but on a limited scale.

Local factory conditions seem as good as ever. August was a banner month and September looks equally as good. Many small contracts and repairs are being carried on and prices on many sizes of stock, matched spruce boards, floorings of all kinds have advanced from \$1.00 to \$5.00 per M. feet. Spruce boards are still very scarce and prices firm; really the spruce board market is the only good market to be found. Refuse lumber stocks are accumulating, but to no great extent, and it will in no way weaken the market. All grades of lumber must, under the above conditions, hold present quotations, for no great accumulations will take place during 1918 and 1919.

Montreal Reports Business Rather Spotty

In Montreal business is slow, although there is a fair number of orders in spots. The local demand is poor, due to the small amount of construction. The U. S. Government embargo will hit those who are doing business with firms over the border. It is yet too early to say to what extent business will be affected, but there can be no doubt that the yard trade will suffer severely.

The only lumber being shipped to the U. K. is for Government purposes. The Quebec firms who have hitherto been exclusively exporters would have been very seriously affected by the impossibility of sending lumber to the other side, owing to the scarcity of bottoms, had not they found a good market in the United States.

B. C. stock has been in fair demand; but the orders, particularly for shipbuilding timber, have been filled, and the market is now in a quiet condition. Cars from the West are rather scarce.

For the moment the most serious problem confronting lumber manufacturers and the pulp companies in the Province of Quebec is how to get sufficient labor for the camps. Inquiries among the manufacturers elicited the information that the shortage is more acute than ever, and that it is absolutely impossible to forecast even approximately the quantities that will be cut either of lumber or pulpwood. The labor agencies are advertising for thousands of men, but the workers are not forthcoming to any appreciable extent.

Wages, too, are again on the upward scale; in the St. Maurice Valley \$70 to \$75 per month is being paid, and the jobbers are stated to be actually paying from \$110 to \$115 per month. The labor is by no means up to the old standard, and the men are more independent than ever. One of the speakers at the meeting of the Woodlands section of the Pulp and Paper Association, in referring to this attitude, declared that there was danger of losing men unless the foremen said "please" every time.

Prices of commodities used in the camps are also higher, and altogether the outlook is for a still further reduction in the cut and a considerable increase in the cost of getting out the logs. In connection with this aspect of the industry, it is of interest to note that a committee of the Woodlands section will make investigations into the possibilities of employing mechanical equipment in the woods operations.

Keeping Their Product Up to the Mark

The co-operative plans of the leading paper companies which constitute the Canada Export Paper Company Ltd., to boost foreign trade, are working out advantageously. The officers of the Company and the organizations which compose it, recently held their quarterly meeting at Price Bros. & Company, Jonquiere, Que. The extensive plants of Price Bros. were inspected and found to be in a most efficient state. Frank Steele is the managing director of the Canada Export Paper Company and states that the objects of the quarterly gatherings and visits of the different plants, are to improve the quality of Canadian news print so that it will be second to none. The members of the Canada Export Company are the Laurentide Company, Price Bros. & Company, The Belgo-Canadian Pulp and Paper Company, The Bromptonville Pulp & Paper Company and the St. Maurice Pulp and Paper Company and their output is sold through the Canada Export Paper Company, who look after the sales in other countries, but are not concerned with those in Canada. Various plans prevail for the exchange of data between the different companies, so that the large exporters of news print may be in a position to secure the maximum of efficiency in the industry and maintain the prestige of their product. All the units are very busy at the present time and are using every effort in their power to retain their hold upon the markets against the day when after the war competition will be keener and production increased. The quarterly sessions held at the different plants, are attended by representatives from all departments, and sectional meetings are conducted among the different heads, at which data of mutual interest is submitted; thus much information of value and comparative returns are received which tend to keep everything keyed up to the highest pitch. The outcome is continued efficiency, watchfulness and co-operation.

At the last quarterly meeting of the Canada Export Paper Company, Sir Wm. Price presided and there was some sixty representatives in attendance. The business proceedings were followed by a dinner at which speeches were made by Sir Wm. Price, Frank Steele, Geo. Chahoon Jr., G. Biermans, J. A. Bothwell, R. O. Johnson and John Ball. The next quarterly meeting will be held at the plant of the Belgo-Canadian Co., at Shawinigan Falls, Que.

The ship St. George, the fourth trawler built to the order of the French government, was successfully launched recently at Port Arthur at the plant of the Canadian Car and Foundry Co. Two more vessels of the six original which have been on the way since June, are yet to be launched.

The Early Bird Catches the Worm and hath a full crop

THERE is no doubt but that a serious shortage will be felt by the lumbering trade in securing supplies of woollen goods for their men owing to the enormous demands made by the various Allied Governments for the Siberian Expedition. We are still in a position to take care of your wants in the lines you have always looked to us to protect you for, but for how long we cannot say—so advise early placing of orders sufficiently large enough for several months to come.

To-day is none too soon.

Montreal Firm Opens Toronto Office

Knox Bros. of Montreal, who are the sole representatives of the Victoria Lumber & Mfg. Company, in Ontario, Quebec and the Maritime Provinces have recently opened an office in Toronto at 707 Bank of Hamilton Bldg. J. B. Knox, Montreal, spent a few days in Toronto, recently, making arrangements for the new quarters. The office is in charge of J. M. McNeil, late of Winnipeg, who has had many years' experience in the lumber business. Mr. McNeil, who still retains his interest in the wholesale lumber firm of Stout & McNeil, Winnipeg, is an old Ontario boy, being born in Midland. He began his connection in the lumber game with the Turner Lumber Company of Midland, and later was on the selling force of the Rainy River Lumber Company. After spending some time on the road he entered the wholesale line in Winnipeg, several years ago, and developed a large business. Mr. McNeil is thoroughly conversant with B. C. forest products and is now calling upon the trade in the various cities and towns of Ontario in the interests of the Victoria Lumber & Mfg. Company, Chemainus, B.C.

Mr. O'Brien Called to the Senate

M. J. O'Brien of Renfrew, Ont., has recently been appointed a member of the Canadian Senate, succeeding the late Brig. General Senator Mason of Toronto. Hon. Mr. O'Brien is a widely-known railway contractor, timber and pulpwood man, and has done much for the town of Renfrew, of which he is its foremost citizen. Mr. O'Brien is a director of the Whalen Pulp & Paper Mills, Ltd., of Vancouver. He has won national fame as a contractor and his elevation to the upper chamber will be pleasing news to his many friends. The new Senator will take to the Upper House the wisdom that comes from a life of peculiar industry, fruitful experience and splendid achievements. He was born in Nova Scotia of Irish parents, and began his railway career when only a lad of fourteen. He became successively a foreman, sub-contractor and contractor. Nearly six miles of the Transcontinental was constructed by him, and other lines which he built include the Kingston and Pembroke, Baie des Chaleurs, Central Counties, Crows Nest Pass and Halifax and South Western Railways. He is President of the Canada and Gulf Terminal Railway, chief promoter of the Canada Graving Dock and Shipbuilding Company, and is a director of many other concerns.

Senator O'Brien's activities have not been confined to railroading. He was one of the pioneers of the North Ontario country; is the owner of the O'Brien mine at Cobalt, and extensively interested in timber limits and coal mines. To his home town of Renfrew, Senator O'Brien has long played the role of a public benefactor. The principal industries of that thriving place are due to his enterprise and capital. A few years ago he presented the town with a \$40,000 opera house. He has been a generous patron of sport.

Driving Home Merits of Good Flooring

That newspaper advertising pays and develops business is evidenced by the "readers" which the McLaren Lumber Company Ltd., Brockville, have been using in the press of that town. The fall season is approaching when many drygoods and housefurnishing concerns have been featuring new linoleum and oilcloths.

The McLaren Lumber Company believed that it was opportune to do a little publicity work in the line of making known the merit, economy and beauty of hardwood flooring, and employed black line locals to state that hardwood flooring cost less than carpets; that it

was cheaper to lay such flooring and that it would last a life time. There was no better time than the present to buy and have it put down.

Another announcement was directed specially to store keepers, and enquired if their floors were of the old-fashioned kind that made the feet tired and the establishment look dirty. If so, it was emphasized that now was the time to lay hardwood flooring. The investment would soon pay for itself and for sanitation, attractive appearance, and durability nothing could equal the hardwood flooring handled by this wide-awake company.

Big Increase Shown in Earnings

An encouraging report on the business of the Canadian Western Lumber Company, at Fraser Mills, B.C., was presented by R. M. Horne Payne, chairman of the Board of Directors, at the seventeenth annual meeting in London of the British Empire Trust Company. The report showed that the working results of the Fraser Mills plant gave profits of \$780,000 in 1917, as against \$270,000 in 1916, and it was stated that the business for the first five months of 1918 was very encouraging. The statement of profits is made "before deducting interest or timber license fees or making provision for depreciation."

New Position for Mr. Chesbro

R. G. Chesbro of Toronto, who for the past two years has been with the Victoria Lumber & Mfg. Company, is now representing the Allen-Stoltz Lumber Company of Vancouver and the Prince Rupert Lumber Company of Prince Rupert, in Eastern Canada. His office is at 504 Bank of Hamilton Bldg., Toronto, and he states that he is in a position to take care of all business in the way of supplying promptly B. C. lumber, timber and shingles. Mr. Chesbro has had a wide experience in the wholesale lumber business in Western Canada and the United States. For a number of years he was engaged in this line at Seattle, Wash., and prior to that had four years connection with the yellow pine trade, both wholesale and retail, in Missouri. In addition to his wholesale and retail insight he has also had considerable mill experience which qualifies him as an all round capable representative who thoroughly understands the needs of customers in B. C. forest products.

R. G. Chesbro, Toronto

L. B. Beale, of Vancouver, B.C., who has been appointed special lumber trade commissioner to Great Britain and Europe and was formerly in charge of the British Columbia forest products commission office in Toronto, spent several days in the city recently on a mission which has for its chief object the securing of new and wider markets for the forest products of the Pacific Coast province, Mr. Beale visited several important points in the United States and also went to Ottawa, Montreal and other cities before proceeding overseas.

"Brazel Patent" SNOW PLOWS

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made.

Combination Model, Lumberman's Snow Plow, can be used either with or without Rut Cutter.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll up and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

Railway to Open Airplane Spruce Belt

A reply to Lord Shaughnessy's criticism of the construction of the Canadian Northern Railway branch from Nitinat to Spooke, on Vancouver Island by the Provincial Government, was given by Hon. John Oliver, Premier. The Premier declared the rails were being laid, to open the extensive airplane spruce belts, and that the Federal Government, and not the Provincial Government, was behind the construction of the line, and would, when rails were secured, replace the rails used. Lord Shaughnessy, who returned from the Island Thursday with a large party of C.P.R. officials, declared the laying of the line was a piece of extravagance which was "inexcusable" at this time. It was a waste of money on the construction of a line not now required, he said.

Canadian Foresters Solve Fuel Problem

Canadian foresters in France are helping to solve the fuel problem for the allied forces by salving the shell-battered trees of the territory recently captured.

The foresters are erecting portable sawmills and sending expert lumbermen to select tree trunks suitable for fuel for transport sections. Many shattered trees are studded with fragments of shell.

In their hasty retreat the Germans left near the Nord Canal a big stationary engine in excellent condition. A forestry officer saw the engine a few hours after the Germans abandoned it, and promptly commandeered this engine. It is now part of the equipment of a Canadian lumber mill in the forward area.

An Opening in India for Veneers

During the past two or three months a representative of the forest service of India, Mr. F. A. Leete, has been in the United States studying methods of lumbering and acquainting himself with logging and sawmill machinery and dry-kiln plants, says the "Timber News" of London, Eng. He spent some time on the Pacific Coast, then visited the Forest Products laboratory at Madison, Wis., spent a short time in Chicago, and the yellow pine regions of the south, and about October 1 he expected to be in England, and plans to reach India about December, after an absence of two years spent in studying the lumber business in various parts of the world. He has been connected with the forest work of India for 25 years, first in northern India, near the southern base of the Himalaya mountains, and during the past 12 years in Burma, with headquarters at Rangoon. It is his purpose to introduce into India improved methods and machinery so far as practicable, and he has made a special effort to investigate machinery with a view to installing plants after reaching home. Though his visit has been as a representative of the Government of India, it is his purpose to place at the disposal of private companies the information gathered on the trip. He is interested in lines other than logging and sawmilling, and has made a study of cooperage, box making, and veneer machinery, as well as dry-kiln methods and plants. He is particularly impressed with the belief that an opening exists in his country for veneer enterprises. Little veneer is now being cut in India though suitable timber is abundant.

Bank Wants to Buy Lumber Co.

An application by Liquidator Billings, of the Fernie Lumber Co. to sell the entire assets of the company to the Imperial Bank for \$245,000, was laid before Mr. Justice Morrison, in Vancouver, recently by Mr. S. S. Taylor, K.C., and strongly resisted by Mr. E. P. Davis, K.C., on behalf of members of the former company.

The bank, explained Mr. Taylor, had a claim for \$258,000, and held as security \$250,000 of debentures at 7 per cent. and also a mortgage on its lands and assets. It costs \$9,900 yearly to continue the liquidation and about \$10,000 was overdue to the government on royalties and taxes. The offer of \$245,000 by the bank was the only offer received in response to advertisements for tenders and the bank was prepared to release the full \$250,000 of debentures if the offer was accepted.

Mr. Davis, in opposing the application, alleged that it was the bank which had refused to make good on a promise to advance a further \$50,000 to the company which had forced it into liquidation. He produced affidavits supporting his claim that if a sale was deferred until a more favorable time, the liquidator might get twice the amount offered by the bank for the property. Mr. Justice Morrison reserved his decision.

The Council of the Montreal Board of Trade has endorsed a resolution submitted by the Western Retail Lumbermen's Association urging that steps be taken to prevent the duplication of firm names, which apparently arises from the fact that each provincial government issues charters and registers companies without reference to such work in other provinces. The Council will communicate with the Solicitor-General regarding the matter.

EDGINGS

Ontario

The Hocken Lumber Company, of Otter Lake Station, intend erecting during the fall a large planing mill, which will complete the equipment of their plant.

The Hotel Iroquois, belonging to the Abitibi Power & Paper Co., at Iroquois Falls, Ont., was recently burned to the ground. The blaze is supposed to have originated from the boiler room. Six persons met death and others had very narrow escapes.

The new ocean-going freighter, the War Witch, was launched recently at the yards of Collingwood Shipbuilding Co. She is a sister ship of the War Wizard, launched a few weeks ago, of the standard type of boat under construction in the various shipyards for the Naval Marine Department of the Imperial Service.

The Glover Basket Company Ltd., has been incorporated with head office at Burlington, Ont., and capital stock of \$100,000, to carry on business as timber merchants, sawmill proprietors, timber growers, and basket and veneer manufacturers. The provisional directors are J. M. Bullen and N. S. Robertson of Toronto.

A notice has been sent out to the members of the Canadian Lumbermen's Association to the effect that the War Trade Board at Washington has asked for information regarding species of lumber handled by the members of the C. L. A. The data, after being sent in, will be tabulated at the secretary's office, in Ottawa, before being forwarded to the War Trade Board.

The Toronto Shipbuilding Company has closed contracts for the building of ten wooden vessels for French interests. The bulk of these vessels are guaranteed for delivery in July and August, 1919. As the present capacity of the shipbuilding plant is taxed to its limit, Mr. Russell said that negotiations were practically completed for the acquiring of additional acreage to meet the requirements of the company. The plant will be kept running to capacity during the winter.

The Yarker Mfg. Company Ltd., has been incorporated with head office at Yarker, Ont., and capital stock of \$250,000, to carry on business among other things, as manufacturers of and dealers in wood and wood products, and to purchase, acquire, or lease lumber or timber lands and timber limits. Among those interested are Hon. Clive Pringle, senator of the Dominion of Canada, N. G. Guthrie, W. S. McCauley, and G. G. Connell, all of the city of Ottawa, Ont.

Sealed tenders will be received up to Oct. 16 by Duncan Scott, Deputy Superintendent-General of Indian Affairs, Ottawa, for the merchantable timber on the Bersimis Reserve, situated on the north shore of the St. Lawrence river, in the county of Saguenay, in the Province of Quebec, comprising spruce, birch, balsam, and including pulpwood timber of seven inches and upwards at the stump. The total area of the reserve is approximately 10 square miles, but two square miles situated at the southern extremity of the reserve at the junction of the St. Lawrence and Bersimis rivers and including the Indian settlement is reserved from sale. Tenderers must state the amount of cash bonus they are prepared to pay for the timber, over and above Crown dues.

Lieut. Douglas Thomson, son of John Thomson, lumber merchant of Port Credit, Ont., was killed at the front on September 3rd. He was twenty years of age and went overseas with the 126th (Peel) Battalion. He took part in the fighting at Vimy Ridge and won his commission on the field. It is believed that he met his death in the drive through the Wotan line. His brother, Lieut. Col. Alex. Thomson, made the supreme sacrifice last November, while fighting around Passchendaele. Lieut. Douglas Thomson was then overseas and crossed from London to the battle front, expecting to see his brother. Instead, he was told that he had been given a soldier's grave a few days before. Much sympathy will be extended the grief-stricken father in his recent bereavement.

Eastern Canada

The pulp plant of Fraser's, Limited, at Edmundstun, N.B., will soon be in operation.

"Scierie Degrosbois, Ltd.", Degrosbois, P.Q., has been formed with a capital stock of \$20,000, to operate saw, excelsior and robbing mills, and to purchase and sell timber limits.

The Hurricane Lumber Mills Co., Ltd., has been incorporated to operate sawmills, deal in lumber of every kind, and also in timber limits. The capital stock is \$20,000, and the head office, Quebec.

H. Chagnon & Co., 27 Burnett St., Montreal, P.Q., recently suffered a serious loss by fire, in which their sash and door factory was destroyed, incurring a loss of \$94,000. Owners will rebuild at once.

The Reid-Newfoundland Co. has established a National Resources Department for developing the timber and other resources along the railway lines. Mr. J. McNeil Forbes is the head of the department.

Messrs. Knox Brothers, Drummond Bldg., 511 St. Catherine St., Montreal, have recently taken over the eastern territory for the Victoria Lumber and Manufacturing Co., whose mills and head office are located at Chemois, B.C.

The Riverside Manufacturing Co., Ltd., of Three Rivers, P.Q., has been formed with a capital stock of \$450,000, to acquire, own and sell, timber limits, and to carry on the business of manufacturers and traders in wood products of every description.

Mr. George Cahoon, jr., president of Laurentide, Ltd., Grand Mere, P.Q., has left for Baltimore to join the chemical branch of the war welfare work of the American Government. He still remains president of the company. Mr. Cahoon is a well-known authority on pulp and paper.

Baptist, Cloutier & Pothier Limitee, Three Rivers, P.Q., who were recently incorporated with a capital of \$49,900, are contemplating extensions to their lumber mill at a cost of \$15,000. They will also build two lumber sheds

60 x 30 ft., frame construction, and will be in the market for three new planers and a band saw, etc. Among those interested are G. E. Baptist, A. Cloutier and R. Portier, all of Three Rivers.

Lieut. H. S. Cheesebrough, of Montreal, has been wounded, although the latest reports say that he is in no danger. Lieut. Cheesebrough was formerly employed by C. A. Spencer, Ltd., wholesale lumber merchants, Montreal.

A schooner of 125 tons was recently launched at the River John, N.S. It was built by C. H. McLennan, who was the builder of the last craft launched there, some twenty years ago. The work was carried out on the present occasion by Thomas McDonald, a veteran of more than eighty years. The keel of another and larger vessel has already been laid in the same yard, under the direction of Mr. McDonald. In the yard of Archie McKenzie, Pictou, a ship of about 600 tons is being built and will be launched in a few weeks.

Western Canada

The Mullin Contracting Company have received a contract for the construction of five ships. Work is to start at once at Prince Rupert, B.C.

The Queen Charlotte City Mills Ltd., has been incorporated with head office at Prince Rupert, B.C., and capital stock of \$49,000, to carry on business as sawmill operators, etc.

The liquidator of the Sid B. Smith Lumber Company, who has so far made a distribution of 55 per cent. in dividends to unsecured creditors, was recently allowed by Mr. Justice Murphy, of Vancouver, an allowance of \$100 per month to date.

Cedar Cove Operations Ltd., has been incorporated with head office at Vancouver, B. C., and capital stock of \$10,000, to carry on business as shingle manufacturers, timber merchants, and to deal in shingles, timber, logs, lumber, etc.

Work is to start at once on the construction of five 1,500 ton wooden ships for the French interests. The general contractors are the Western Canada Shipyards Ltd., Ft. of Carrall St., Vancouver, B.C. The manager is Mr. C. V. Cummings.

The Cameron Lumber Company, Garbally Road, Victoria, B.C., have plans in progress for the erection of a fuel plant at that point to manufacture prepared fuel to take the place of cordwood. The manager of the company is Mr. J. O. Cameron.

The Vancouver Cooperage Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$25,000, to carry on business as coopers, manufacturers of barrels, kegs, casks, tubs, etc., to operate dry kilns, logging camps, sawmills, etc.

The War Kitimat, the third of the four hulls built by the New Westminster Construction and Engineering Co., Limited, New Westminster, B.C., was recently launched at the Poplar Island shipyard. The vessel was built on the order of the Imperial Munitions Board.

Spruce lumber from Edmonton and beyond is now being sent to the United States, as far away as New York and Philadelphia. The Chisholm Lumber Company and the Northwest Lumber Company and several mills operating west of Edmonton, are all trying out the American markets.

The B. C. Wood Turners Ltd., has been incorporated with capital stock of \$10,000 and head office at Vancouver, B.C., to carry on business as loggers, lumber, shingle, sash and door and general manufacturers in all its branches, and to own and operate sawmills, planing mills, shingles, mills, etc.

Peter Bain, lumber manufacturer of Port Moody, has entered suit against the Electric Lumber Company of Port Moody, claiming \$2,500 damages for the alleged wrongful removal of 350,000 feet of lumber from lot 105, group 1, and also for damages for alleged wrongful entry and injury to the property.

The Ruby Creek Land & Log Company, Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as timber merchants, lumbermen, loggers, sawmill and shingle mill proprietors and to buy, sell, prepare for market, handle, import, export and deal in saw logs, timber, shingles, bolders, piles, poles, etc.

Sealed tenders are being received by the Minister of Lands for B. C., until the 17th day of October, 1918, for the purchase of License X1365, to cut 1,680,000 feet of fir, hemlock, and cedar on an area situated on Anvil Island, New Westminster District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the Chief Forester, Victoria, B.C.

There were nearly twice as many saw logs produced by loggers working in timber berths in the New Westminster section of the railway belt during May as were produced in July. This is shown by figures issued by Mr. E. Walmsley, assistant crown timber agent, showing the records of timber scaled by the department's scalers in these months. Mr. Walmsley attributes part of the decrease to the prevalence of the mosquito pest. At its height, many loggers refused to work. The details are as follow: Saw logs scaled, in feet, board measure, May, 11,618,000; June, 7,463,284; July, 6,180,586; shingle bolts scaled, in cords: May, 5731; June, 6642; July, 4446.

Every indication points to the fact that the Timber Testing Laboratory for Vancouver will be officially approved by the Provincial Government within the next few days. The Forestry Branch, Department of the Interior, Canada, and the Imperial Ministry of Munitions, who are also sharing in the expense, have officially approved it. The testing machines, wood-working machinery, and all equipment will be shipped from the Forest Products Laboratory in Montreal. R. W. Sterns, Chief of the Department of Timber Tests, will visit the Coast as soon as the Laboratory building on the B. C. University site, Point Grey, is completed and will remain to see the equipment installed and the work well started.

Vancouver has particular reason to strafe the Hun for one of her pet industries, the lumber business, is seriously affected by the depredation of the submarine. Andrew Alexander, in charge of foreign lumber shipments at the Hastings mill, said that many orders from various parts of the world remained unfilled on this account. An instance of how every available bottom is being pressed into use is shown by the fact that one of two "windjammers" loading at the mill for South Africa is a converted barge. She is the barquentine St. James of San Francisco. This vessel, together with the four-masted iron barque Mariechen, loading beside her, will soon leave on a journey that will require four months' steady sailing. They are being loaded with planks and square timber. The St. James takes a load of 1,400,000 feet, the larger vessel filling her holds with over two million feet.

SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tensioning yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

William Hamilton Co., Limited

Peterboro, Ontario

“Not Another Truck Would Do the Same Work Yours Is Doing”

The Great Southern Lumber Company of Bogalusa, La., largest operators in the world, with a daily capacity of 1,000,000 feet, unqualifiedly commend and indorse the Duplex 4-Wheel Drive Truck.

This big corporation, which owns the New Orleans & Great Northern Railway Company, is operating two Duplex Trucks.

The trucks are being used to haul turpentine dip in Mississippi—the average daily mileage totaling 80, under most adverse conditions—conditions that would put a rear wheel drive truck out of business in 60 days, according to the lumber company.

These trucks are not only hauling capacity loads, but in addition, are pulling 5-ton trailers also loaded to their limit with turpentine dip.

The success with which the Great Southern Lumber Company is operating Duplex Trucks is ample evidence of their ruggedness, dependability, power and economy.

Write today for our booklet, “The Modern and Efficient Way to Haul Lumber”, and “Duplex Doings”, the heavy hauler’s magazine.

Above are shown views of the Great Southern Lumber Company's administration buildings, logging operations and mill which has a daily capacity of 1,000,000 feet.

Delays Are Dangerous

The War is not over yet, and will not be over in time to release men for next winter's work in the woods.

Men were scarce last season, particularly the kind you wanted, and will be still scarcer next season.

"A word to the wise is sufficient." If you cannot get enough men, you will have to have Machinery to take the place of the men—LOADING AND SKIDDING MACHINERY—or fall down on your contracts.

Marsh Engineering Works, Limited

Standard 2' Drum Engine for Skidding or Loading Logs the year round

Order Early

Make sure of having your LOADING and SKIDDING MACHINERY on the spot when you want to use it.

Delays are dangerous, and he who delays ordering is apt to be delayed later on in his work by the tardy arrival of his needed Machinery.

Lumber is absolutely necessary to help with the war. Will you stop short of your best effort to produce the lumber?

Established 1846 **Belleville, Ontario**

When
You
Overhaul

**GOODHUE
BELTS**

“Acme Waterproof” Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with “Goodhue Belts” and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won’t stretch.

Ring Oiling

WHY
Bond
HangersEliminate
Hot Bearings

Are you considering the purchase of Hangers for your new factory?

Perhaps you do not realize the necessity of buying hangers that will eliminate hot bearings, or the trouble they will cause in a hanger? If a bearing happened to become hot in a hanger holding six or more machines, and they all stand idle while the shop mechanic fools around trying to fix it, you'd soon realize what inefficiency and expense this is.

The Ring-oiling device on Bond Hangers supplies a constant flow of lubricant on the full surface of the shaft and bearings, which keeps them cool when running at high speed.

Get our catalog containing full details before you buy.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims.

GRATON & KNIGHT

Standardized Series

LEATHER BELTING

Tanned by us for belting use

Bruising Drives

Constant trouble-maker drives become highly efficient when equipped with SparOak—that double service belt. The pulley surface of SparOak Belting is Graton & Knight Spartan Leather—the highest frictional value ever attained in belting. The outside is finest quality of heavy Oak tanned center stock. The combination gives a belt that not only grips the pulley at high speed with fluctuating loads, but stands the mauling of hard service conditions.

If you have a troublesome, bruising drive, don't delay in learning about SparOak. For a whole class of belting dilemmas it is the answer.

Send for our new book—"Standardized Leather Belting"—which describes the character and application of SparOak and others of our Standardized Series.

Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours
JOHN M. MACLEAN,
Superintendent.

VANCOUVER

—economy to-day is a deed of patriotism

—and is extensively engaging the attention of manufacturers everywhere. There are hundreds of lumber mills in Canada with an unproductive scrap-heap. The sawdust and waste wood lying around these mills can be turned into a great asset by installing Wood Distilling and other Chemical Plant. We have specialized in the building of chemical plants; and have installations in all parts of the world—plants with a big guarantee behind them!

DISTILLATION PLANTS: Slabs, Limbs, etc.

ALCOHOL PLANTS: Sawdust, Shavings, etc.

PULP MILL EQUIPMENT: Soda, etc.

OXALIC ACID PLANTS: Sawdust, etc.

WASTE SULPHITE LIQUOR FERMENTING PLANTS: Alcohol.

Let us hear from you.

PHEW! Don't Suffer That Disagreeable Smell

GET

ROSEALENE

AT ONCE

ROSEALENE WILL INSTANTLY KILL ALL ODORS and will keep generating odors suppressed for a period 10 to 20 times longer than any known disinfectant.

Antiseptic, Insecticide and Germicide. Exterminates all vermin, including Bed Bugs and Ants.

ROSEALENE is itself odorless. It is cheap in price, harmless, non-poisonous and an excellent antiseptic for cuts and wounds. ROSEALENE is used in Hospitals, Dairies, Theatres, Abattoirs, Restaurants, Stables, Kennels, Sewers and every place where odors occur.

HEAVY DUTY ENGINES

Engines of the Side Crank Style are built by us with single cylinder, with capacities up to 300 H.P. These are especially usable where steam economy is not the first consideration, and where a slow steady power is required. In saw mills, pulp mills, and similar industrial plants they can be used to good advantage.

We manufacture a complete line of Steam Plant Accessories.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

The Ideal Edger for Light Mills

Specifications

Our new Double Edger is built on entirely new lines, and possesses many features that commend it to mill men. The saving in material alone will soon pay for the machine. The output of a mill with this machine can be increased by one-third. It is best adapted for medium-sized or portable mills that cut from 5,000 to 25,000 feet of lumber per day.

SAWS—This Edger is fitted with either two or three saws as required. The saws are 16 in. in diameter, and 10 in. gauge. The greatest distance between saws is:—Two saw machines, 24 in.; three saw machine, 20 in., the least distance between saws, 2 in.

DRIVE PULLEY—The Drive Pulley is 9 in. x 9 in., affording a good belt grip, and is supported by an outside bearing.

SAW ARBOR—The Saw Arbor is made of 2½ in. steel, and has very wide bearings.

Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Firstbrook Bros.
Limited
Penetang or Toronto, Ont.

"Well Bought is Half Sold"

While the above is ever true, we are obliged to deny you our usual "Stock Offers" this issue, in the interest of the health of the Trade.

We are advised that a few dealers have a touch of Colic, due to the embargo into the States.

We prescribe:—

1 oz. Common Sense

1 dr. Determination (Tinct. Iron)

10 grs. Salt (respecting "Blue Ruin" stories)

2 oz. Patriotism

1 oz. Knowledge (of Short Production and increasing Cost of Operation.)

Take in 1/2 glass Optimism after each Croaker leaves your office.

This will be an effective "Bracer."

Precautionary Suggestions:

Don't embargo your own Intellect.

Wear a cheery smile.

Keep your feet warm.

Keep your head cool.

All danger of collapse will thus be avoided.

We Manufacture the Following Well Known Brands

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

FIRE BRICK

Each brand is specially suited to a separate use. We have the experience to manufacture and supply the finest grade of Fire Brick for the varying uses of the Lumber Industry. The same brick may not meet the requirements of your Dutch Oven and of your Refuse Burner.

This is a product that should have your most careful attention. When so much depends directly on the successful operation and dependability of Fire Brick in your plant, it will repay you many times to make a most careful investigation before the installation. Let us show you where our product has been successfully used for years. Let us suggest a special brand for your particular purpose.

We have an interesting catalogue that will be sent you. It will give you an insight into the proper methods of Fire Brick construction.

ATKINS STERLING QUALITY SAWS

"They are a great help to us"—says the Canadian.

"Finest on Earth"—says the Yankee.

"Oui," says the Frenchman, "Ruse de Guerre."

Yes, they are a stratagem of war, almost as necessary as munitions and airplanes.

In France, Atkins Sterling Quality Saws are doing yeoman service for the Allied Armies. They have been given their place in the big fight because they are trustworthy at critical times.

Throughout Canada you will find Atkins Saws, in the mills, in the camps, and in the shipbuilding plants, giving excellent results.

The supreme test of quality is in the rough work of active service. Atkins Saws have made good.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

No. 20

Retail Association on the Honor Roll in Square Dealing

One of the motions carried at the meeting of the Ontario Retail Lumber Dealers Association, on September 3rd, may be overlooked to some extent if its full meaning is not impressed upon the trade. Not that there is danger of the retailers themselves overlooking it, as its principle lies at the root of all successful retail trade, but the wholesalers and manufacturers who sell to the retail trade may need to have it drawn to their attention and emphasized, that the Ontario Association, by the passing of such a resolution, has placed itself on record as desiring to encourage square dealing between retailers and wholesalers, and will not stand for anything which savors of the cancellation of orders by retailers upon a falling market. At the present time there is a special importance to this resolution as there are those in the trade who are expecting a falling market to develop in the near future, and who consider the recent decline in the price of spruce and of some other woods as the first chapter in a story of price decline which is to follow the advances that have taken place in the last two or three years.

Without wishing to agree with those who are predicting a general fall in prices, it is right that appreciation should be expressed of the principle involved in the resolution passed by the Ontario Retailers, as its enforcement means much to the whole trade. Since the Association came into existence ten months ago, many cases have come up in which retailers have complained of the failure of wholesalers to live up to their contracts to deliver stock for which orders had been accepted many months ago. It is only fair to the wholesalers to say that in practically every case which was brought to their attention by the Association they have complied with the request to make delivery or to reimburse the retailer for his loss. It is poor rule, however, that will not work both ways, and it is to the credit of the Ontario Retail Lumber Dealers Association that at an early stage in their career they have seen the importance of going on record in connection with this matter. The Association can have no room in its ranks for members who wish to hold the wholesalers up to the letter

of the contract, but who think it a good piece of business to cancel a contract when they find they can buy the stock cheaper somewhere else. Whenever a declining market sets in, this temptation will appear, and the retail association cannot afford to allow the rest of the trade to entertain any doubts as to where it stands in the matter.

It can be taken for granted that the meaning of this resolution is not only that the retailers will buy their stocks from those wholesalers who play the game, but will require that the members of the Association show their good faith and their belief in the benefits of co-operation by treating the wholesaler fairly also when they find themselves contracted to buy stock at a price higher than that to which the market may have fallen before delivery is made.

It is interesting to note that the Ohio Association of Retail Lumber Dealers has gone on record in a similar manner, and has even gone the length of announcing in a resolution that it will ask for the surrender of membership of any member of the Association who shall cancel orders hereafter because of a price advantage in doing so. The tendency of the times in Association work is to lay special emphasis on the necessity for absolute good faith in all business dealings and probably other associations of retailers will fall in line.

A striking instance of this determination to play the game is also afforded by the case of the Yellow Pine Wholesalers' Association of the United States. A short time ago they discussed the matter and passed the following resolution:

"Resolved: That the Yellow Pine Wholesalers' Association go on record as being in accord with the principle that the wholesalers' responsibility does not end with the acceptance of the order, but they must fill same regardless of whether or not their manufacturing connection fills the contract; and in case of the mill's failure to ship, the wholesaler should repurchase, regardless of loss, after a reasonable time has elapsed."

Taken together and acted upon fully, these two resolutions, of the retailers and the wholesalers, would practically put an end to the difficulties which have been much too frequent in the past, and which, in many cases, have been aggravated and possibly even caused by the fact that every man was a law unto himself in the matter, as no official utterance had been made upon it. It will be in order for the other lumber associations in Canada, wholesale and manufacturing, as well as retail, to go on record similarly.

How Should Cost of Lumber Delivery be Regulated?

To charge or not to charge for delivery is a perplexing question with many retail lumbermen at the present time. There recently appeared in these columns the views of several representative dealers on this important question and opinion was about equally divided. In some of the smaller places no charge is made, while in others there is a flat rate graded according to quantities. Whether the yard man has motor truck delivery or makes use of carts and horses he finds that the expense of this branch of his service is climbing all the while.

In the smaller towns and cities where distances are short, there is either free distribution or a small sum levied—frequently just what the dealer thinks he can get. In some cases rebates are allowed farmers and others taking away the material that they buy. If a charge is made there is a wide divergence of views on what ground it should be based, quantity, distance, character of material etc. The whole problem after all appears to be one for local solution. Some yard men think the expense of delivery should be figured in overhead cost, the same as rent, wages, insurance, light, heat, taxes, etc. Thus the buyer when he is quoted so much on a bill, knows exactly what it is going to cost him laid down at his door. On the other hand, there are those who declare that delivery is a special service, separate and distinct, having really nothing to do with stock and yard facilities. It is only a means to an end, and when such a convenience is furnished, the customer should bear a fair share of the expense of maintenance. Some lumber merchants have no fixed system, but endeavor on small orders to get a little extra to cover cartage which may not always work out equitably. There is one point on which the trade is pretty much

a unit, and that it, all orders delivered beyond the corporate limits of any town or city, should carry a certain charge for the service. Where there is free delivery customers are often inclined to abuse the privilege and keep telephoning for small jags, whereas if a charge is made, they gauge their requirements more accurately.

Various plans are being tried out by dealers in different towns. A system which has operated very successfully in a city of twenty-five thousand persons might be worth while trying in other places. When it was first instituted there were the usual number of "kicks," and a certain amount of fault finding, the same as there is when anything in the way of a reform or advancement is inaugurated, but the objections soon wore away. Dealers and customers now appear perfectly satisfied. Briefly, the plan is that lumber deliveries amounting to less than 1,500 feet are charged for at the rate of 25 cents for each trip. All deliveries of 1,500 feet or more are charged 40 cents each. In the case of lath and shingles, 25 cents is charged for deliveries of less than five thousand and 40 cents for deliveries of from five to ten thousand. For material other than lumber, lath, and shingles a charge of 25 cents is made for each trip.

When stock material is returned in as good condition as when delivered, it is credited at the price charged less ten per cent, to which is added a cartage charge of fifty cents. The effect of this has been to make customers more careful about ordering the return of small items that were not used. Frequently they bring the material back themselves. It is important to note that all prices are at the yard. The delivery charge is not included in the contract price and the contractor is expected to determine for himself the extra cost. A charge is made for the delivery of every item, if it is a cellar sash or a length of moulding.

Importance of Accurate Thought and Speech in Business

According to Tallyrand, language was given us to conceal thought. This somewhat cynical observation, when applied in a political sense may hold true, but in the ordinary affairs of everyday life, judging by the number of sonorous expletives heard, language was given to mankind to explode or foment thought. There are many kinds of expression used in the ordinary business letter, some curt and comprehensive, others plausible and polite, and still others disjointed and pert, with a few revealing clearness, compactness and brevity.

It has been declared by students of political economy that the average citizen is intellectually indolent; that he prefers to let others do the thinking for him and takes his opinions ready-made from the newspapers or certain would-be leaders whose conceptions may be false or whose views may be biased. In a similar sense it is noticeable that there are many loose, clumsy and inaccurate business communications of the present day. In trying to excel in certain lines we often overstep the mark and become involved and complex, or we are impertinent in our efforts to be pertinent; weak and rambling when we think that we have presented a strong and aggressive front.

Speaking upon this line a writer in a New York magazine says that ordinary business intercourse is handicapped a great deal at the present day by clumsy and inaccurate talk. Very appropriately he enquires how much time is wasted daily in repeating, explaining and correcting business statements—not only in the store, but in the factory, in the counting house and even in governmental communications. He says that improvements in effectiveness and accuracy of daily talk, alike as to matter and form, are actually much easier than is commonly supposed, for any man or woman of fair intelligence. On this point there are widely diversified views. Many persons think that such improvement, after the plastic years of childhood, is both rare and difficult, and hence are discouraged from the effort. Some other convincing observations are made and what is said will be read with much interest by those who give any serious thought, not only to language as a business asset, but who want to improve their speech so that they will be more quickly and easily understood under all circumstances:—

Anyone can learn in a short time, with or without a teacher, to

talk with fair distinctness, directness, and accuracy. Language is a matter of habit, and the habit can be modified greatly with a little continuous effort.

The judgment of the business houses is correct in one respect, namely, that large and general improvement in a standard of talk needs the backing of public sentiment. Language is a social affair, and language-habits are fixed mainly by local custom. The desire for improvement comes mainly through pressure of public opinion, and American public opinion has ignored the matter of communication as a factor in practical affairs. The point to be emphasized, however, is that any individual who sets about it systematically and sensibly can improve his own command of language—his power of communication—very markedly. Furthermore, any employer, by means of a little ingenuity and persistence, can bring about a material improvement in the effective use of language by his employees.

Now, the way to test such assertions as these is to do a little common sense experimenting with your own every day talk—we have all been lax in this matter—and see what results you get. The suggestions which follow—not many, and easily tested—have proved useful in the cases of a number of persons of my acquaintance. If you find them beneficial, you will very soon think of ways to do something in your immediate circle, with your own children, with your business associates. But try them yourself first, and see whether improvement, in effectiveness of ordinary talk, is practicable in the case of the adult you know best.

The most serious defect of ordinary talk, the root of most other defects, is tactlessness, inattentiveness, clumsy indirectness in the way we express our thoughts. Suppose you begin your experimenting with this suggestion: Whatever you have to say, wherever you are, watch your listener. You will not stare at him, of course; you need not even look his way, much of the time. But think of him all the time, and try to put your thought in a form which he will understand, and like.

Most of us, most of the time, soliloquize. Our attention is fixed mainly upon our own idea. Instead of talking we are really only thinking aloud—sometimes with our intimates the family, etc.—because we take their attention for granted; sometimes, on the other hand, when we have something important to say to a person we wish to impress, we become so absorbed in getting the idea just right that we forget to adapt it to the other person, to "get it across." Perhaps you know the indistinctness and incoherence of one who is talking in his sleep. That is only the extreme form of "thinking aloud."

When we talk in the telephone we generally aim our remarks better. Perhaps there is something in the act of sending words through the transmitter which holds our attention. Long distance conversation, besides, costs money. At any rate, telephone talk is nearly always more direct, more concise, and better worded than our talk at other times. It is apt also to be uttered more distinctly, and in a pleasant and more expressive tone. Now, whenever you open your mouth to speak, all day long, try to use your "telephone manner." You will discover before long that people seem more interested, they listen better. If we could all observe this rule all the time absent minded replies, harangues which shoot over the listener's head, and most of the remarks which breed trouble would disappear.

If you think you cannot trust your brain to feed the right words into your mouth as you need them, wait a moment and run over mentally what you have to say. That will not hurt the effect of your remarks when they come. Actually, though, you will find that when you really concentrate on the other person the right words come more readily. Providing, of course, that you have something to say, otherwise be still.

There will be other results. It is paradoxical but true that once you learn to watch the other fellow you become better aware yourself of what you are doing.

The South Vancouver Shingle Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$1,100,000 to carry on business as timber merchants, sawmill and shingle mill operators, loggers, lumbermen; to buy, sell, prepare for market, manipulate, import, export and deal in saw-logs, shingle bolts, timber, lumber and wood of all kinds.

Poise and a Vision

And the lumberman must play his part

"It hurts to think," some cynic has said, and in that aphorism uttered much of truth. For the easy way is to follow the conventional, to let the emotions rather than the intellect rule, and to drift. To really think, implies a fine courage, an independence, a measure of humility and a willingness to assume the hazard of miscalculation—the penalty of misunderstanding. These are testing times of character and ability, of insight and perception, both in the larger fields of affairs and in the circumscriptions of individual environment, **AND THE LUMBERMAN MUST PLAY HIS PART!**

Never in the history of present society has the opportunity been so wide nor the call so keen for him to find himself, to crystalize his convictions, to enlarge his outlook, to increase his stature; never the air so charged with problems, present and prospective; never the hazards of adventure so uncertain nor the promise of attainment so involved. Red Blood, Imagination, Conscience—all these call him to, with lusty soul, grasp these occasions, enter into these problems, find himself and to be; and all this for the joy of it, for the zest of it, for the worth of it! Never in the history of the trade have changes been more kaleidoscopic, nor re-adjustments so frequent and imperative. Let him be glad that he is joined to a business so untrammelled by conventions, and so susceptible to adjustments—a business arising out of primary needs and existing in their fulfillment. These are the days when artificialities are swept aside, and only the essentials count. Let him rejoice that his is not a business of secondary refinements, but arising out of man's primary necessity, in that great trinity of need—food, raiment, shelter, and existing in the satisfaction thereof—a business of the proletariat. What is to be its course and its accomplishment, present and future?

One of the peculiarities of the lumber business in relation to man's primary needs is that it largely implements and supplements their realization. The house of the Pioneer is a most meagre affair, but as the food is grown, the wool is clipped, clothing is made and boots are fashioned, the call for lumber becomes more insistent for packages, for wagons, for cars, for warehouses, for larger barns, and lastly, for better homes. Thus, in the accumulation of wealth, does lumber make both its contribution and receive its acknowledgment. . .

Coming out of something like this, did we, in Canada, find ourselves at the beginning of the war, just passing out of an era of ardent, if sometimes unwise, house-building and development? Carried, as this was, too far, the shock of the war completed a prostration unwelcome but inevitable. Soon, however, compensation stepped in and, in the new requirements of war urge, our product found outlet in satisfying war's demands for camps, packages, munition plants and munition boxes, here, in the States and in England. Under this unusual demand, and influenced by a restricted and costlier production, stocks have materially shrunk and prices have advanced.

Again we found a new situation. The submarine curtailed shipments across the seas; our camps and munition factories were finished and these outlets discontinued. But now entered the States into the war, and, with that, a demand for

lumber altogether exceeding anything in our experience, and as yet unsatisfied. Indeed, depending upon the continuance of the war, a demand that is inconsequential compared with what is to come. And how can it be otherwise, when the creative energies of 110,000,000 people become centred upon the war to the extent of a now estimated 70 per cent. of their productive capacity?

In all of this civilian demands are perforce restricted, but nonetheless new cities are being planned, new houses built, railway equipment renewed and extended, ships launched as never before, but all under government direction instead of individual.

In Canada our Government has not entered so sweepingly into the avenues of accustomed civilian effort, but it, too, is giving definite consideration to housing problems now pressing, and still more to be after that glad day when the war is over. Already in this and in hospital extension, we are beginning to glimpse something of the meaning of soldier re-establishment, and to understand that the end of the war but means the beginning of another period of development to provide for those who have suffered by the war, and to replace and replenish the supplies that war's demands have depleted. For man's wants will not go unsatisfied as soon as he can turn his attention again to their cries.

In the larger part of Canada's field of lumber production, the sawing season is practically finished. Generally speaking, it has been a short season and a short cut. Woods' work is under way, but largely desultory and without great promise. At the very best the log cut will be much under last year, and the cost higher.

We, too, are looking with eager eyes for peace; not a German peace, but a peace that shall, in satisfaction, end these years of denial and bereavement.

When the returning ships bring home again our brave boys, spared the supreme sacrifice, we know that these same ships will call for cargoes of our fields, our factories, our forests, to re-habilitate devastated Europe, and we wish that we might produce in the interim more, for more will be wanted. England, who in normal times took from our shores our pine and spruce in millions, will call for much. Her yards are empty. France and Italy and Belgium, even more, will need our contributions. Homeless people must be housed, and suffering relieved with all speed. Destroyed factories must be restored, and the wheels of industry set in motion.

Between the then and now, re-adjustments will continue, but they will be the re-adjustments of incidentals, and, in no wise alter these fundamentals of an enlarging need and a decreasing contribution. If, viewing this, the Canadian lumberman holds no conviction of the dignity of his relationships, and no vision of their scope in fulfillment, he is, in truth, a meagre soul.

Rather let him enthusiastically enter into the responsibilities of the future; to seek to produce economically, to stabilize conditions and to so order the industry that his product may continue to hold its favor, and so, enter in, at a fair cost, to the tremendous demands of a new era.

The Real Reason For Embargo On Lumber

Entirely Eliminates Transit Cars Which it is Thought Will Be Given Death Blow—Some Interesting Phases of the Present Situation

The embargo on the shipment of the products of the forest east of the Mississippi and north of the Ohio rivers, the reason for the drastic action, its probable effect, operation and outcome are the sole topics wherever members of the lumber trade congregate. The views of manufacturers and wholesalers are pretty well covered in the market reports from different centres appearing in the "Canada Lumberman," and need not be repeated here.

While the move was like a bolt of flame from an unclouded sky, surprises are often more disconcerting at first than they prove to be afterwards. There is, on the whole, no reason to suspect but that, barring the interruption, delay and misconception produced by the somewhat radical regulation of the United States Railway Administration, everything will come out all right.

It is always refreshing to learn how they view matters at home, and how the people directly on the scene size up the situation. Such

trolled through the issuance of permits by the Car Service Section at Washington or by the various Freight Traffic Committees having jurisdiction over their respective territories. It is indicated in the embargo that permits will be issued when operating conditions warrant and upon presentation by the Consignees of evidence which justifies the transportation service. By this we think that permits will be controlled entirely by the conditions on the carriers. If conditions remain comparatively free, as they are at this writing, the issuance of permits will be on a rather liberal basis. On the contrary, if the conditions tighten up, then there will no doubt be a tightening up in the issuance of permits. It seems to be the intention of the embargo to allow the movement of commercial shipments insofar as the demands of the trade are needful and with, of course, due respect to the transportation conditions. We do not, by any means, think the movement of lumber traffic, and, on the contrary, we think that the intention of the Railroad Administration is to so control the situation that possibly more lumber will be possible of moving than could otherwise move if the situation was allowed to congest itself.

May Develop into Good Proposition

There is one effect which the embargo will have; and that is the entire elimination of transit cars, or diversion and reconsignment of cars which may for other reasons get into trouble and destination needed to be changed. With every movement of lumber into the Eastern territory being covered by a permit and there being a strict ban on the diversion or reconsignment of such shipments moving under permit you can readily see that the transit business is given a death blow. Permits will only be issued from the actual point of shipment to the actual point of consumption and no change will be allowed after the car starts. This will result in hardship in some individual cases, but no doubt by the control of reconsignment and the elimination of the transit business, it may in the long run do no great harm to the lumber interests, although transit cars have frequently been of great benefit to government departments requiring quick deliveries.

We will, of course, have to await the working out of the embargo or for further expression from Washington regarding it before we can form a definite conclusion as to the wisdom of such an embargo.

In my opinion the embargo is rather strict, and it seems to us unduly puts upon the lumber interest a burden which should not be borne unless it can be clearly demonstrated by the Administration that it is necessary.

S. C. Higgins, of the Car Service Bureau of the United States Railway Administration, at a meeting of the trade in Cincinnati, assured the lumbermen that it is not the intention to hamper the lumber industry but so to control it that the shipment of lumber will not interfere with the movement of troops and war materials. It was explained that permits will be issued as liberally as possible and that as long as traffic conditions remain open few obstacles will be put in the way of lumbermen transacting their business normally.

However, the transit car has been ruled off and no reconsignments will be permitted. He assured the lumbermen of co-operation and a disposition to help matters rather than to hinder them.

Not Intention to Hamper Trade

A. C. Quixley, President of the Lumbermen's Association of Chicago, said recently:—

"The embargo order means that in the future there will be no reconsignment of cars. There are hundreds of mills which have no selling organizations. These manufacturers have for years loaded their lumber in cars which were sent out to be sold by commission men. These are the hardest hit. We have asked for a modification of the order which could include the entire switching district of this market as Chicago. I am against the transit car business, but on the other hand, if other commodities can be sent into the markets and sold in this manner, why not lumber?"

"The order will stop all transit shipments," said a prominent commission man, "but it is no doubt a war move, and those who are hard hit must await developments. There is no doubt but the permit system also will eliminate congestion at destination. I believe the move is for the purpose of classifying the essential and the non-essential wood-consuming industries, and the beginning of a move for Government control of the entire lumber industry."

1918

ATTENTION MR. E. H. DeGROOT, Jr.

Gentlemen:—

Please furnish us with special transportation authority covering the following shipment:

No. of Cars

Name of Shipper

Address of Shipper

To be shipped from

Name of Railroad

Commodity

Consignee

Destination

Delivery Line

REMARKS:

State here the necessity for securing this material, amount in stock, number of cars in transit, etc. In case not sufficient room below to explain fully reasons for securing this shipment, separate sheet should be used and securely attached to this application. Future applications should be made on this or similar form. If shipment has been offered and declined, state what railroad refused same and reasons for such refusal.

We will arrange loading to maximum capacity and will unload promptly upon arrival.

SIGNATURE

Freight Agent at destination will state briefly conditions at his station with particular reference to the ability of the consignee to handle shipment promptly on arrival.

AGENT

RAILROAD

The form used for requesting Shipping Permit

expressions of opinion help to clear the atmosphere of doubt and mist and shed light and understanding on a situation that requires skilled handling and that must be met diplomatically and judiciously.

Here is what Noel Butler, of Philadelphia, who is conceded to be an exceptionally able traffic manager, declares:—

I am inclined to think that the reason the embargo was placed was for the purpose of preventing, during the coming winter, the congested situation which existed during the last winter or two. If it does result in eliminating this congestion, without unduly restricting the movement of commercial lumber, it will possibly be a good proposition, although it is true that it entails no small amount of work on the part of the average lumber dealer in securing permits and arranging for the shipment of his traffic.

As to the intention of the application of this embargo, it would seem to me that the paragraph D throws some light on the attitude of the Railroad Administration, wherein they mention that commercial shipments of forest products to the embargoed territory will be con-

The Lumbering Activities of Nova Scotia

While Cost of Production Has Been High, Manufacturers Should Have in the Aggregate Very Satisfactory Business for the Year

By B. H. Dunfield, Halifax

Probably no industry in the Province of Nova Scotia has undergone a greater change since the outbreak of war than the lumber industry, especially in the Eastern end of the Province, along the lines of the Canadian Government railway and the Dominion Atlantic. In pre-war times these districts produced annually one hundred to one hundred and fifty million feet of Spruce Deals and Scantling. This stock always found a ready market in the United Kingdom. In those days steamers and sailing ships could be seen almost any time during the year loading at the Richmond Piers, Halifax. In passing we may state that these old familiar piers were entirely destroyed by the explosion on December 6th last, which at the same time snuffed out the lives of many railway employes and stevedores, who had spent many years in the Richmond yards and who gave much of their time to the handling of export lumber. They will be greatly missed by all the lumber shippers when overseas shipments are again resumed, no matter how remote that time may be. They were faithful to their employers and courteous to the public.

During the first two years of the war manufacturers in the districts named above were able to continue manufacturing lumber as in the past and the shippers were able to obtain tonnage quite freely and make sales in the United Kingdom for private account, and at prices that were quite remunerative, especially on account of the rapid increase in freight rates. In 1915 several sailing ships taking in cargo at the same time would be getting rates from 65/- to 120/- per standard and when goods paying the latter rate were marketable at a profit, those paying much lower rates, left handsome margins. But this business did not last long. The Allied Governments soon began to requisition tonnage and buy lumber for their own account, which, of course, relieved the shippers of the task of securing tonnage, and which left fairly good net results. In 1916 quite large shipments were made in this way, and at the end of that year very little stock remained on hand. In the early months of 1917 Government buying was also carried on to quite a large extent, but later in the year this buying ceased on account of the shortage in tonnage, and manufacturers and shippers have since been looking for other markets. For a time during 1917 things looked very blue. The U. S. market was dull on account of the Government restrictions on building, and the local market in our Province was also inactive. Some fifty millions or more of three inch spruce, sawn for the English market, remained unshipped and unsold, being held largely by the exporters. Just how this could be disposed of was a perplexing problem at that time. Soon, however, the United States began to mobilize their armies, to launch an extensive shipbuilding scheme and in general to prepare to enter the war.

This work called for an enormous quantity of lumber such as boards, scantling and plank. American buyers visited this section eager to buy and large quantities of our lumber began to move into New England districts by rail, something most unusual from Nova Scotia, practically all lumber shipped into the United States in past years going forward by water. But rail shipments at this time proved much more feasible on account of (1) the urgent need for the lumber (2) cheaper transportation, as the stock could be taken from the mills and placed on the works at destinations in a very short time and with the use of very little labor as it eliminated the loading and unloading of vessels at ports where labor was very scarce and expensive. Boards were in such demand that practically all the surplus of three inch spruce in this Province was shipped to the States in a few months, being mostly milled in transit. This was an unheard of thing in connection with the shipment of lumber from Nova Scotia.

During the past two or three years the American market has also consumed large quantities of our N. S. Hardwood. Messrs. Dunfield & Co., Ltd., of Halifax have in their employ a man who devotes his entire time to this branch of their business. This man spent several months in the United States so as to become thoroughly familiar with the requirements of the trade, and shipments are now graded according to National Rules. In pre-war times practically the whole output of Hardwood in this Province went to the English market and was manufactured in to 2, 2½, 3 and 4 inch. The manufacturers are now getting familiar with the requirements of the United States market, with the result that large quantities are being turned that way.

In addition to the heavy demand for Spruce from the United States market during this year, there has been an abnormal demand

in our local market, due largely to the reconstruction work being carried on in Halifax. Notwithstanding the fact that a very small proportion of the output this year has been disposed of in the English market, the close of the year will see very little stock on hand, much less than at any corresponding period for many years.

While the cost of production this year has obviously been very high, for reasons familiar to all, the manufacturers should have a satisfactory year's business. The labor question here, as generally, is becoming more acute as the days go by. Wages are steadily increasing and the quality of the labor becoming more inefficient. Woodsmen are receiving to-day at least fifty per cent more than at the outbreak of war. Portable mills sawing by contract are asking for 1919 in some cases one hundred per cent. more than they received four or five years ago.

Good Work Done by New Association

Organization of Lumbering Interests in New Brunswick Results in Fewer Forest Fires

Although New Brunswick has been one of the best lumbering provinces in North America it has only been within the last few months that the lumbermen have appreciated the fact that they should band together for the protection and betterment of this great provincial industry. As previously published in the "Canada Lumberman" the operators of New Brunswick some time ago got together and formed what is known as the "New Brunswick Lumbermen's Association." The object for this action came in the realization that in unity there is strength. They believed that such an organization would mean closer co-operation with the crown lands department, hence better opportunities of securing desirable legislation, and above all one great united effort to prevent the ravages of their arch enemy-forest fires.

At a meeting of the association held recently these questions were discussed pro and con, and as a result the advantages from such an organization were evident. To-day all men in the province, interested in the lumbering industry, are included in the association. The association aims to keep its members in close touch with market conditions so that the smaller operators will benefit by the experience of the larger concerns.

That good has been derived from this organization none can deny. One has only to look back a few years to realize that it would have been a great benefit if the organization had been in existence for years instead of months. Not only has this association taken means for mutual protection and betterment of the industry, but it has also taken steps to combat forest fires, and thus save millions of dollars worth of lumber. In the spring the Maritime Provinces suffered severely from fires which devastated large areas of wooded lands and changed magnificent lumbering possibilities into charred and ruined wastes. Later in the summer fires were not so prevalent, due chiefly to renewed efforts on the part of the government to stamp out this needless and appalling waste on a great industry. Men were appointed to patrol districts and, as a result, many fires were discovered in incipient stages and extinguished before getting beyond control.

True, there were numerous fires, more particularly in Nova Scotia, but from now on there is every reason to hope and expect a betterment in this situation. The members are and have been for some time, starting an educational campaign in an effort to bring home to the trapper, fisherman and hunter the need of exercising greater care while in the woods. Posters are prominently displayed, signs shown on motion picture screens pointing out the terrible ravages made yearly in the province's chief industry as a result of carelessness in not properly extinguishing fires, throwing cigarettes, matches, etc., where they will catch shrubbery and cause large conflagrations among the magnificent timber lands. With the passing of the wooded wilds will go the much sought moose, deer and caribou, and it is in the interest of the hunter to safeguard his beloved hunting grounds as well as protect the lumbering interests. That this campaign is already bearing fruit is evinced from the fact that forest fires are fewer and it is hoped that before many years they will be something we read about but seldom see.

The Jubilee of Historic Sawmill

Festive Occasion Observed at Rockland by Employees in Honor of Senator Edwards

Senator W. C. Edwards, Ottawa

An event unique in the history of the lumber industry of Canada, was observed at Rockland, Ont., on October 5, when the half century celebration of the founding of the Edwards sawmill at that place was marked by a splendid demonstration.

Senator W. C. Edwards, the venerable head of the firm, who is now in his seventy-fifth year, started in the lumber business at Thurso, Que., and his first venture in his own behalf was at Rockland in 1868, where operations were begun in a small way. To-day the great industries of the firm which he still directs at Rockland and Ottawa, are a tribute to the foresight, industry and perseverance of the pioneer, of whom the late Earl Grey, former Governor-General of Canada, remarked that he "put heart, vig-

or, enthusiasm, judgment and knowledge into anything he undertakes." In 1894 Hon. Mr. Edwards extended his activities to Ottawa, and has built up vast interests in the Capital. The mill output at Rockland is about three hundred thousand feet a day and consists of red and white pine, hemlock and other woods. All the larger logs of the company are sawed at this plant, while the smaller ones are taken care of in Ottawa.

The employees at Rockland, located on the Ottawa River, in honor of the golden jubilee, were given a half holiday and the proceedings were marked by sports, speeches and a presentation to Senator Edwards of a fine oil painting of himself, which was executed by G. Horne Russell, of Montreal. Among those who delivered addresses of congratulation and goodwill, were Sir Wilfrid Laurier, A. S. Marion, Reeve of Rockland, and T. H. Wyman. James Erskine, who built the framework of the first Edwards mill, in the fall of 1868, also made a short speech of a reminiscent character, while two men who had worked in the mill when it started, Antoine Bissonette, and Ovellion Boulrice, were present. The Rockland band and the pipers' band from Ottawa furnished excellent music, and there were races, games and a baseball match.

The first mill operated by Hon. W. C. Edwards was constructed in the fall of 1868, and from it has grown, not merely one of the largest lumber businesses in Canada, but a whole village—that of Rockland. In 1868 only two small families were living where the village now stands, and to-day the population is 4,000. As the number of mill workers increased, shopkeepers came to cater to their needs, so that there is now a considerable and orderly village, well laid out and well supplied.

The mills of the W. C. Edwards & Company are among the best fitted establishments on the continent. Their sheds and mills on Sussex Street, Ottawa, are not only constructed of concrete, but have installed in them a sprinkler system, as well as every possible fire prevention device. Since 1868 the business of the W. C. Edwards & Company has multiplied 25 times.

Studying the Forest Wealth of Canada

Owing to the tremendous consumption of timber, lumber, pulp wood, etc., during the last few years, the exhaustion in the near future of Canadian forest resources can no longer be regarded as a negligible prospect, says the Weekly Bulletin, which is published by the Department of Trade and Commerce, Ottawa. This situation led the advisory board of the forestry branch of the Department of the Interior to make, in January, 1917, an analysis of the existing forestry situation. In order to meet this situation, it was evident that certain regulative measures would have to be adopted, but it was equally evident that such measures would have to be based on definite scientific information, little of which was available at that date. In order, therefore, to obtain a scientific basis for future remedial measures and also to curtail present wasteful methods the advisory board of the forestry branch drew up the following recommendations:

- (1) That the stock taking of the standing timber of eastern Canada should be completed.
- (2) That a quick reconnaissance survey should be made on the condition of cut-over lands.
- (3) That a study should be initiated of the possibilities and successful methods of securing reproduction of the more important timber trees, especially white pine and spruce.
- (4) That an early determination should be made of the rates of growth, in volume, of the important timber trees, both individually and in forest stands, to permit calculation of possible quantity of reproduction. This work would include the construction of volume tables.

In discussing these recommendations, it should be pointed out that some of this work has been done, both in Canada and elsewhere. For example, the Commission of Conservation has completed valuable investigations on the timber of British Columbia and Nova Scotia. The study of the rate of reproduction, etc., of trees in Europe has also been undertaken, and in the United States certain investigations have been made on similar topics for American trees. As regards the species that are common to the United States and Canada, the results obtained by American study would, of course, be partly applicable; but it must be remembered that climatic and soil conditions of Canada, owing to its higher latitude, are factors that render rather uncertain information derived from investigations carried on abroad.

In consequence of the recommendations made by the advisory board of the Department of the Interior, the director of the forestry branch brought the matter to the attention of the Research Council. It was proposed that these investigations be made on the Petawawa Military Reserve, a part of which, only 25 square miles in extent, is used for military purposes, the remaining 80 square miles being therefore available for forestry studies. This is part of an old cut-over timber district, on which a second forest has begun to develop, and the timber on it is at a stage of growth that renders it suitable for the proposed study. Recognizing the importance of the subject, the research council recommended that a grant should be given to carry out the investigation during the summers of 1917 and the following years. Consequently, in August, 1917, a preliminary survey was made on the reserve by a forest survey party and valuable results were obtained. In May, 1918, the work was recommenced and is now proceeding satisfactorily.

Expect Big Shortage in Pulpwood Cut

An official of the International Paper Company, after a tour of the Canadian pulp-wood districts from Hudson Bay to the Bay of Fundy, says:—

"A huge shortage of pulp-wood can be expected this year. Present rate of cutting is restricted by labor shortages, and I doubt if cut this year will be more than 50 per cent. of normal. It is almost impossible to secure even common labor to work at the mills or cut wood.

"Pulp wood costs us \$5 more a cord than last year. It takes 1½ cords of wood to manufacture one ton of paper. Increased cost of wood alone is adding \$7.50 to cost of one ton of newsprint. The situation in New England and New York pulp-wood districts shows little improvement over Canadian conditions.

"We do not expect to be affected until summer or fall of next year as we have supplies sufficient to meet needs until then. Meanwhile, with the draft about to make new inroads on depleted supply of labor, outlook for improvement is not bright.

"Regarding a new mill at Three Rivers, it is stated that nothing will develop until after the war. Estimated pre-war cost was in the neighborhood of \$6,000,000.

Pulp Company Loses in Law Suit

The Court of Appeals handed down its decision recently at Fredericton, N.B., in the case of Spafford W. Wade, Roy Wade and Angelina Wade vs. Nashwaak Pulp & Paper Company, of St. John, N.B. The action was tried before a jury last November, the hearing of evidence occupying ten days. The jury returned a verdict for the plaintiffs, awarding damages to the extent of \$684. From the verdict the defendant company appealed to the Court of Appeals, asking that the verdict be set aside and a new trial ordered. The Nashwaak Pulp & Paper Company appeared as appellants with Wade et al as respondents. The Court of Appeals refused to set aside the verdict. The decision of the Court lays down the respective rights of riparian owners and the lumbermen using streams for driving lumber on such floatable rivers as the Nashwaak. The action was to recover damages for injury to land belonging to the plaintiffs, by depositing logs thereon, damaging and destroying crops and wearing away the bank. From the verdict the defendant appealed and asked for a new trial which has been refused.

Is Wood Suitable for Constructing Mill Buildings

*By W. Kynoch B.Sc F.E. and R. J. Blair, B.A.

The Forest Products Laboratories have frequently had occasion to draw attention to the serious financial losses resulting from the ravages of so-called dry rot in mill or factory buildings of wooden construction. Numerous cases in which this trouble has occurred in Canadian buildings have been carefully investigated and one of these, which has been under observation for upwards of a year, affords a typical example of a deplorable state of affairs which could have been entirely avoided, had those concerned in the erection of the building been guided by the necessary knowledge of the technology of timber and the mechanism of the decay of wood.

From the point of view of the owners of the building the facts are as follows: Five years ago a large factory building was constructed with heavy timber columns and beams and laminated floors of 2 in. x 6 in. planks overlaid by $\frac{7}{8}$ inch hardwood. The operations carried on in the building are such that the relative humidity in the interior is usually high. Serious decay was first noted about three years after the erection of the factory, and since that time has apparently become

steadily worse. The tearing out of practically the whole of the timber construction has now become imperative and such is the prejudice against wood as a structural material which has been created in the minds of the owners that they have decided to replace entirely with reinforced concrete, at an estimated expenditure of \$100,000.

The Germs of Decay in Wood

From a technical standpoint some additional important facts present themselves. The decay of wood is due to the action upon it of low forms of plants known as wood-destroying fungi and bacteria. For practical purposes the bacteria may be ignored. The germs of decay are no more inherent in timber than tobacco is inherent in a tobacco-pipe; infection must come from outside and sound wood becomes infected in two ways, namely, by contact with either tissue or spores of a wood-destroying fungus under suitable conditions of temperature, moisture and air supply. It should be noted that this is not merely an interesting theory. It is a hard fact proved beyond dispute by extensive research and thousands of carefully conducted tests, and we can now induce decay in timber at will in the laboratory. A number of kinds of fungi which can be definitely identified are responsible for the destruction of timber in buildings. In the particular case under discussion the range of temperature and relative humidity of the air in the factory were such as to provide exceedingly favorable conditions for the growth of several of the most destructive kinds. In addition the unseasoned state of the timber facilitated decay because it was not even necessary for the wood to absorb water from the humid air before reaching the moisture content permitting the action of the destructive agent—the moisture was there already. Lastly, a large quantity of the timber used was of the character shown in Fig. 1—that is to say, of rapid growth and low density. Different pieces of

wood, even of the same species, differ in their ability to resist attack. Fig. 2 shows timber of slower growth and higher density and possessing much greater resistance to wood-destroying fungi. What occurred, therefore, was that timber of low resistance in a condition to invite decay (i.e., unseasoned) was placed in a building in which the operations to be carried on gave rise to very favorable conditions for the growth of several extremely destructive kinds of fungi. It is therefore obvious that in all human probability decay of the timber would occur.

There is no Mystery About It

Such instances, and they are numerous, raise two important points for the consideration of the building lumber trades. Firstly, they bring wood into serious disrepute as a structural material. Secondly, they do not simply happen without warning, like an earthquake, nor are they due to some mysterious and unknown cause. The cause is known and the trouble can be prevented by proper procedure. Wood initially sound will last for an indefinite period so far as decay is concerned, if any one of the factors essential to the growth of fungi is lacking or can be effectively controlled. The moisture factor is especially important. If the required amount of moisture is present in the wood the fungi can grow in it. If it can be kept thoroughly air-dry their growth is absolutely prevented. It is, of course, rarely practicable under ordinary conditions to control the moisture content of the wood, the humidity of the air, temperature or air supply. The food supply of the fungus, however, that is, the wood itself, can readily be con-

trolled in that by efficient impregnation with a suitable preservative it can be made chemically impossible for the fungus to act upon it. In the particular mill with which we are now concerned the conditions were so exacting that the timber should without doubt have received efficient preservative treatment.

The selection of the preservative to be used for the treatment of timber for a mill or factory building should depend on the circumstances of the particular case. A material which has been employed in several cases in Canada and the United States, known to the Laboratories, is mercuric chloride (corrosive sublimate). This preservative has been in commercial use to a rather limited extent for many years for the treatment of timber for various purposes, both in Europe and on this continent and has given excellent results.

The Effective Use of Preservatives

Before the war several concerns of which the writers have knowledge treated timber with mercuric chloride for use in their own mill buildings, at a cost of about \$3.00 per thousand feet B.M. The price of the preservative has since advanced so greatly, however, that it might in some cases prove prohibitive at the present time. Other less costly preservatives which might be used are zinc chloride and sodium fluoride. The Laboratories would be glad to furnish, on re-

quest, further particulars regarding the use of these materials for the treatment of timber for mill buildings. Timber to be treated with preservatives should always be thoroughly air-dry. Treating green or very wet wood is time and money wasted, as little or no penetration of the preservative can be secured. In the case of large structural timbers, which frequently take years to become seasoned, the outer inch at least should be reasonably dry before treatment.

In mill or factory buildings or parts of the same, where the operations carried on create very favorable conditions for the growth of fungi, the use of untreated timber, especially timber of low density, or timber containing much sapwood, is inviting disaster. If the timber be efficiently treated, however, there is no objection to the presence of a considerable proportion of sound sapwood or to the use of sound second quality or low density wood, provided that where necessary due allowance be made for the lower strength of the lighter material. The added cost of treatment could therefore in some cases be partially offset by using less costly timber.

It must not be inferred that treatment of timber for mill construction is always necessary. It is only requisite where the conditions are especially exacting. In other cases the use of timber of the proper quality and the observance of certain precautions will give reasonable assurance of immunity from decay. The following precautions, some of which would require modification in individual cases, have been mentioned by the Laboratories on previous occasions, but will bear repetition here.

Some Precautions to be Taken

(1) Only dense material of the more durable species should be used, and the proportion of sapwood allowed should be small.

(2) The timber should be carefully inspected as to soundness, density and proportion of heartwood, and material not up to specifications should be rejected.

(3) Planking should be thoroughly seasoned in all cases. In large timbers the outer inch at least should be reasonably dry.

(4) Timber delivered on the work should be piled out of contact with the soil and with any unsound wood.

(5) All reasonable and practicable precautions should be taken to keep the woods as dry as possible before and during construction.

(6) Laminated floors should not be built while the wood is wet. If this is unavoidable it is advisable to proceed as follows: As soon as the building is completed and the heating plant installed, close all doors and windows, raise the temperature inside the building to, say, 120 degs. F., or as near this as possible, and maintain this condition for several days. If this can be done before building paper, pitch or hardwood flooring is applied over the laminated flooring so much the better. (In the case of storage or other buildings not provided with heating plants it is suggested that some temporary means of heating might be used. Where this is not feasible it would be safer to build with treated timber).

(7) Wood should not be covered with plaster or other materials or painted until at least two years after the building has been occupied.

(8) Construction at joints, where beams enter walls, etc., should be such as to permit of ample ventilation.

(9) Special care should be taken in the construction of roofs when untreated timber is used. It is necessary to have the interior roof planking thoroughly insulated so as to prevent condensation of moisture on it in winter.

(10) An examination of the planking and timbers should be made periodically, say half-yearly, during the first three or four years after the completion of the building.

Cause of Infection in Lumber Yard

That timber frequently becomes infected in the lumber yard and that trouble from decay in mill buildings often arises from the installation of such infected timber is beyond question. Where infection occurs in the lumber yard it is usually due to the existence of conditions which foster the growth of fungi, such as the following:

(1) Location of yard in a damp low-lying situation or neglecting to provide proper drainage.

(2) Allowing decaying waste wood to accumulate in the yard and to form centres for the distribution of infection.

(3) Using partially decayed foundation timbers for lumber piles, whereby disease is transmitted to sound lumber piled on same. (Foundation timbers should preferably be thoroughly impregnated with creosote oil).

(4) Piling lumber too near the ground, thus retarding circulation of air where it is most needed and keeping timber in the lower part of the piles in a favorable condition of infection.

(5) Using diseased spacers in lumber piles.

(6) Permitting diseased timber to remain as part of permanent structures in the yard.

Timber possesses several important advantages over other materials for interior construction in mill or factory buildings. For example, the initial cost is appreciably lower, alterations and extensions

can be more easily and cheaply effected, construction can be completed in a shorter time and conditions are frequently more conducive to health and therefore to efficient work on the part of employees. Lower insurance rates can be secured for a sprinklered building of the standard mill construction type than for so-called fireproof buildings not protected by sprinklers. The only serious objection to the use of timber for this purpose is its tendency to decay and as we have endeavored to show the cause of the disease is known and preventive measures are neither difficult nor costly.

Says Labor Conditions Worst Ever

Reviewing the outlook of labor for the coming season a leading lumberman in Northern Ontario writes the "Canada Lumberman" as follows:—

"The prospects for labor in the woods are the worst we have ever experienced. In the logging season of 1916-17, when we thought that conditions were about as bad as they could be, and labor quite scarce and of poor quality, we managed to have, during the skidding season, from 1,000 to 1,200 men. During the season of 1917-18 all we could average was about 560 to 575 men. This season it would appear from present indications that 350 to 400 will be the limit.

"We do everything that anyone else in the business does to secure men, and I therefore would suppose that other lumbermen are in about the same place as we are, insofar as the number of men they have and the number they would like to have. From the above figures you can judge exactly what the production will be in proportion to the previous season.

"Besides the number of men being employed in the woods this season being so much less than last year and the year before, the efficiency is going off in almost the same ratio. Over half the men employed in the woods now are foreigners, mostly Austrians, and they nearly all have money in their belts or in the savings bank, anywhere from \$100 to \$2,000 apiece and, therefore, are quite independent, and while the anti-loading law gives us a certain measure of control, yet it only requires the proverb about 'Leading the horse to the water,' to explain. No men of draft age will leave the province of Quebec, consequently, the men we get from there are old men or little boys who should be at school.

"What the markets will be next season is problematical; a great deal depends on when and how the war will end. I do not suppose we have any fear about how it will terminate, but just when is a question, and how it will affect the lumber market is the other interrogation to which nobody can give a definite answer. If lumber takes a big slump after the present cost of production, then nearly all the manufacturers will go stone broke."

May Plant Canadian Poplar in Italy

W. McL. Clarke, Canadian Trade Commissioner, writing to the Trade and Commerce Department at Ottawa, from Milan, Italy, says:

The Italian paper industry is facing a crisis owing to the insufficient production of wood for papermaking and because of the well-known difficulties which are experienced in importing the wood from Norway, Sweden and America. The average annual consumption of mechanical wood-pulp in Italy was, prior to the war, 700,000 quintals, of which 600,000 quintals were derived from the native poplar and about 100,000 quintals imported from abroad. In addition 95,000 quintals of cellulose were yearly imported from Germany, Austria and Norway. Owing to the acuteness of this problem of furnishing the necessary wood-pulp, a problem now aggravated on account of the war, unless the necessary provisions are now taken this crisis threatens to continue even after the war. Therefore as a just step toward bettering the situation it is advisable to make extensive plantings of Canadian poplar. If these are made in places suitably adapted for their growth, highly compensating returns will follow in view of the prices now prevailing for poplar wood.

To-day one tree alone costs 30 lire, and on a hectare (2½ acres) devoted to the growth of poplar, and in which 600 trees could be cultivated, would yield about 18,000 lire. The land most suitable for the cultivation of the Canadian poplar is along the Po and other rivers and in uncultivated territory, provided it is not subject to periodical inundations. We advise the Canadian poplar in preference to our own because it has a more rapid and vigorous growth. It only requires from twelve to fifteen years for the Canadian poplar to be industrially of use, while a period of twenty to twenty-five years is required for the common poplar.

The Canadian poplar ordinarily is adapted to specialized cultivation. The trees are planted four or five metres apart, in rows of the same distance from one another or in single rows along the rivers, as in Lombardy, and require a large amount of chemical fertilizer. The young poplar trees of two years' growth are generally planted.

New Sale Held on Stumpage Basis

The Policy Adopted by New Brunswick Results Satisfactorily—
Many Parcels of Timber Sold.

The big sale of timber berths in New Brunswick by the Department of Lands and Mines was held in Fredericton, October 3. The sale was conducted on a new basis, one of stumpage instead of mileage, and turned out decidedly for the better from the viewpoint of the Province. Hon. E. A. Smith, Minister of Lands and Mines, speaking of the results, said that they were highly satisfactory. Proceedings were conducted in the large assembly chamber of the parliament building, as the number present from all over the province more than taxed the capacity of the Crown Land Office. All sections of New Brunswick were represented; small operators predominated, but many of the large lumbering firms had someone present in their interests. The sale was noticeable for being on a new basis for the province, stumpage alone being charged and the berths free of mileage and fire tax.

The sale began at noon and as each lot was put up the upset price was announced. No upset price was lower than \$5.50, and on some lots it was \$6. The upset price was on spruce, fir, pine and cedar. Other woods paid as follows: Hemlock, four-fifths; hardwood, one-half; poplar, three-quarters; railway ties, twelve cents extra.

Some lots were withdrawn by the department on account of the scarcity of timber on them. For the training grounds reserve lots there was no lively bidding, many of those lots being difficult of access.

The Properties and the Purchasers.

The purchasers were as follows:

Nine square miles, head of McKenzie Creek, near Covered Bridge, J. S. Hoskins, Baltimore, (N. B.), \$6. Ten square miles, five miles east of McGivney, W. S. Anderson & Co., Burnt Church, \$5.50. Four square miles, McKenzie Creek, near Covered Bridge, John A. Young, M.P.P., Taymouth (N.B.), \$5.50. Ten square miles, head north branch Cain's river, W. S. Anderson & Co., Burnt Church, \$5.50. Four square miles, east of McGivney Junction, W. S. Anderson & Co., Burnt Church, \$5.50. Two square miles east of Little River, F. C. Coburn, Ripples, \$5.50. Five square miles, Little River and Bear Brook, C. G. Coburn, Ripples, \$5.50. Four quarter miles, southeast of Crocker Lake, Northumberland county, Andrew Blackwell, \$6.50. Five quarter miles, north forks Bass River, Kent county, James A. Burns, Rexton, \$5.50. Three square miles, St. Nicholas River, James M. Burns, Rexton, \$5.50. Two and a half square miles, west of Little River, F. C. Coburn, Ripples, \$5.50. Two square miles west of Bay du Vin river, A. & R. Logie, Loggieville, \$5.70.

The sale was completed in the afternoon with the highest bid \$17.25 per thousand. Another bid was \$16.50. The sales were:

Eight square miles on Big Brook, J. D. Irving, Buctouche, \$6.20; two and a half square miles, south of Dungarvon River, Archie Alcorn, Blackville, \$5.50; three square miles, east branch Sabbies River, Archie Alcorn, \$67.75; two square miles, south of Southwest Rusignish, Burden Phillips, \$5.50; two square miles, northwest of Nacawic River, two square miles Little Northwest Nacawiacac River, two square miles in parish of Southampton, James K. Pinder, M.P.P., Temperance Vale \$5.50; two square miles on Three Tree Creek, Eldon Phillips and Fraser Waugh, \$5.50; two square miles east of Pollett River, Fred Colpitts, Salisbury, \$2.75; two square miles, Eel River, York and Carleton county, five and a half miles near Canterbury, H. N. Grant, Canterbury, \$5.50; four and a half miles west of South Forks of Coal Branch, two and a half miles on South Forks of Coal Branch, two square miles at head, eight and a half square miles on Otter Brook, Fred D. McWilliam, Ford's Mills \$16.50; two and a half square miles at head of Coal Branch, A. Chapman, \$6.30; two and a half square miles on North Forks of Coal Branch, Fred D. McWilliam, \$17.25; three square miles on White Rapids Brook, Archie Alcorn, \$7.70; two square miles on Mill Brook, Washademoak, Wilson Box Co., St. John, \$5.50; two square miles on Magaguadavic River, Ernest Vail, Brockaway, \$5.50; three square miles on Northwest Ormocto, Lake River Valley Lumber Company, Ormocto, \$5.50; eight and a half square miles, parish of Dumbarton, Charlotte county, J. M. Mann, Calais (Me.), \$6; six and a half square miles east of Big Magaguadavic Lake, Fraser Limited, Edmundston, \$5.50; two square miles, parish of St. Mary's, Kent county, J. D. Irving, Buctouche, \$6; three square miles, Six Mile Brooks, Cain's River, John Kervin, Shinickburn, \$5.50; two square miles, Six Mile Brook, Cain's River, and three square miles South Branch Six Mile Brook, Fenton S. McCormick, Blackville, \$5.50; two and a half square miles, northwest of Crockers Lake, Joseph Ferguson, Cassellis, \$6.50; two and a half square miles,

Lower Trout Brook, Magaguadavic River, Percy J. Anderson, Lawrence Station, \$7.75.

In connection with the sale of N. B. timber licenses an officer of the Department of Lands and Mines states that over one-third of the whole lot were disposed of. The lands put up were not the best, by any means, in the province, but in many cases were those upon which timber holders had the opinion five years ago of renewing their lease, but did not think it worth while to do so, very often because the lands were nearly depleted. The price per thousand at which the berths were bid in was based on the value of the spruce. In two cases the stumpage was extraordinarily high. These cases may be understood in this way. The person who bid them in against opposition, did not object to offering a high price for spruce as he did not intend to cut spruce, there being very little on the land anyway. His intention, it is understood, is only to cut sleepers on which there is a flat rate of 12 cents. The rate of stumpage is twice as high or more than the Province has been receiving. Under the old system there was included a small amount for mileage, which does not apply under the present system.

Personal Paragraphs of Interest

Mr. Foy, of H. R. Goodday & Co., wholesale lumber merchants, St. Peter Street, Quebec, and representatives of Foy, Morgan & Co., timber brokers, London, Eng., is a patient in a Quebec hospital, suffering from an attack of typhoid.

William Rutherford, of Montreal, has been appointed treasurer of the Inland Cultivation Association, formed to promote the cultivation of idle lands near Canadian cities, and particularly for using contractors' idle equipment in this connection. The Rockland group of the Association recently organized a demonstration of the use of tractors on land just outside Montreal.

Lieut. E. T. McGibbon, R.A.F., son of C. McGibbon, lumberman, of Penetanguishene, was in Toronto recently on his way overseas after a furlough to recover from injuries sustained in action.

W. T. Mason, of Mason, Gordon & Company, Montreal, returned last month from a visit of some weeks to the British Columbia mills.

L. D. Barclay, manager of the Canadian Western Lumber Company's Toronto office, has returned from a successful selling trip throughout the Maritime Provinces, going as far as Halifax, in which city rebuilding operations are going on rapidly.

E. R. Sutherland, representing the McDonald Lumber Company, of Winnipeg, was in Toronto recently calling upon the trade.

Word was received in St. John, N.B., recently, that Captain Colin Mackay, of the 12th Siege Battery, and Miss Jeannette Bridges, of St. John, were united in marriage recently in London, England. Captain Mackay is a son of Malcolm W. Mackay, a well-known lumber merchant in St. John, N.B.

During a recent visit to Quebec City a representative of the "Canada Lumberman" called on Mr. Auger, of Auger & Son, one of the oldest lumbermen in Canada. The date happened to be the 77th birthday of Mr. Auger, who was "celebrating" it by attending to business as usual.

J. C. Shields, President of the Dominion Lumber and Timber Company, of Vancouver, B.C., was in Toronto recently calling upon the members of the trade.

Hugh A. Rose of Toronto, representing Mason, Gordon & Company, of Montreal, recently completed a very satisfactory selling tour throughout Quebec and the Maritime Provinces.

The death occurred suddenly of Miss Fordyce Stevenson Gall, daughter of Mr. George Gall, of the Gall Lumber Company, Toronto. She had been ill only twenty-four hours with pneumonia. Miss Gall was born in Toronto and educated at Queen Victoria School and Parkdale Collegiate Institute. Besides her parents, she is survived by three brothers, Captain Hugh Gall, in France; W. C. Gall, and A. J. Gall, of the Gall Lumber Company, and by five sisters.

Harry Lauder Visits Canadian Lumbermen

Mr. Harry Lauder, the noted music hall singer, who has been spending a holiday with his friend Mr. Donald Munro at Banchory, paid a visit to the Canadian Lumber Camp at Kemnay, England, the other day along with Mr. Munro. They were both very interested in all they saw and in the splendid work being done by the Canadian lumbermen there. They were shown over the mill by Captain Fee and other officers. It may be mentioned that this mill holds the record for Scotland, having produced during six days 202,835 feet board measure. The men considered it a great honor that Lauder should have paid them a visit, and several of them had the pleasure of interesting conversation with him.

How Does Your Stock Stand at Present?

Importance of Retail Lumberman Having Complete and Simple System of Quantity and Grade

One of the most important features of the retail business is a correct system of stock-keeping. Inasmuch as the dealer carries a great many items on hand, and has not only many varieties of lumber, but many thicknesses and grades of the same kind, it is obvious that no system which depends largely on the memory of the lumber merchant is going to be even reasonably satisfactory, says a writer in the "Southern Lumberman," who has closely studied the general situation.

Furthermore, since good business at all times, and especially now, when it is desired to keep overhead as low as possible, recommends carrying a relatively small stock and turning this rapidly, rather than a big stock which is turned more slowly, it is essential that one know just what this stock consists of. In this way reinforcements may be made at the proper time, and buying may be done on a more intelligent and definite basis. And if there is any particular place where the elimination of guesswork counts, it is in buying.

When lumber is put in stock it is, of course, customary to mark the bins or sheds where it is piled in such a way as to indicate what

the character of the material is. In many yards the same space is regularly used for the same stock at all times, except when there is an overflow which crowds some of it into another section of the shed. This makes for ease in handling, and enables even a green man, with proper supervision, to get along pretty well.

In the office, however, there should be a complete record of the quantity, grade and location of each item in stock. As additional receipts are unloaded, this should be corrected; and as lumber is shipped out, deductions should be made, so that at all times the lumberman will have before him a record of the stock on hand. This sounds like a lot of work, but as a matter of fact it needs take only a few minutes a day; and the dealer will be surprised to see how often a record will be of value to him.

A card index can be used to good advantage in making a stock-keeping system, though many dealers seem to prefer sheets, which are written out freshly at short intervals. The objection to the card

system is that too many items are handled, and therefore a great many cards are needed, whereas with a sheet everything is before the dealer all the time. Personally, the writer prefers the card index, though there is the added objection that cards are likely to get lost or mislaid if they get out of the file, as frequently happens when the records are being corrected. But no matter what the particular form is, the lumberman should see to it that he has at all times the information he needs on this subject.

One big advantage, in addition to convenience in buying, which has already been referred to, is in case of fire loss. Many of the insurance companies use what is known as the iron safe clause on their policies, and this requires that the assured keep his books and records in a fireproof container, so that in case of loss they will be available as a record for adjustment. The dealer who is able to present to the insurance companies a complete showing of the lumber on hand at the time of the fire is certain of a better and more rapid adjustment than if he is compelled to rely on his memory, aided by the record of invoices from shippers which have been entered and paid. This must be modified by the sales, and hence there is certain to be room for argument as to just how much stock was on hand at the time of the fire. When the other system is used, everything is down in black and white, and the insurance adjuster will be ready to accept it as a reasonable and credible evidence of the loss.

Again, the retailer who keeps such a record is able to check his inventories exactly. It is not unlikely that many a dealer pays for a good deal more lumber than he actually sells. That may be explained by errors in measuring lumber to be delivered to customers; by petty thefts around the yard, which are often numerous, especially in certain localities, and by depreciation of stock that is carried so long that it loses grade and is not saleable. (Such things happen). In any event, however, it is up to the dealer to find out if there is any discrepancy between his office record of the lumber he has on hand and the quantity shown by actual inventory to be in the yard. If there is any variation, he wants to know how much it is and who or what is responsible for it.

Regulating the Supply of Labor

Most retailers are wont to complain of labor conditions at present, and especially of the low grade of the help that it is possible to obtain. However, it must be admitted that from certain standpoints the conditions might be very much worse, says an exchange.

For illustration, take the yard which is not doing a normal amount of business, and which does not need as large a force as usual. It has no quarrel with a situation which provides a considerable number of "drifters," since it is thus able to pick up a crew of able-bodied men to assist in unloading cars whenever this may become necessary.

There are many dealers who formerly maintained a permanent force for this purpose, but their receipts are now so much smaller, with only an occasional car coming in, and the result is that they need extra help only at times. They are able as a rule to pick up the men they need, and, while these are not especially desirable workmen, they can handle the lumber, and that is what the dealer is principally interested in.

If every man who is now picked up at intervals for special work of this kind were employed at a regular job, the lumberman who now is able to get his occasional services would find it mighty difficult to get along. He might even have to have a larger permanent force in order to be sure of having the men needed to do this work. Consequently all of the advantages are not on the same side, but it must be admitted that the tendency of laborers to drift is for the benefit of the man who has work to do only now and then, and who does not want to carry a maximum force all of the time.

In fact, many a dealer who has found it advisable to reduce operating expenses has accomplished it in just that way, by letting out all except those who are needed for the regular, every-day work of the yard. In this way he is paying only for the work that must be done, and when the amount of work is increased by the necessity for unloading a car, he goes out and picks up the additional men, who are paid for the day or two that they are on the job.

One thing which tends to make irregular workers of laborers of this type is that they can usually get just as much for their work as the steady employe gets. This is no doubt wrong, and one of the ways to correct the situation is to pay a definite increase in wages to those who have been with the company for more than a year. A scale should be established whereby the man who stays on the job will get the higher rate of pay for each additional year that he works.

The writer was informed recently that one large company, which employs thousands of men, has adopted a system whereby a bonus of a substantial percentage of the year's earnings is paid to those who succeed in staying on the payroll for the full period. This gives every man something to look forward to, and makes even the most thoughtless stop and think before a job is lightly tossed aside.

What Others Say On Trade Problems

THE National Lumber Manufacturers' Association, with the best interests of the entire industry in view, has taken up nationally the question of selling lumber by the piece. In other words, if an intending purchaser walks into a lumber yard and asks for one piece of board or some piece of any other item that may be in stock, the dealer will immediately quote him the exact price of that one piece and not befuddle the mind of the buyer with the answer that it is worth so much per thousand feet.

Undoubtedly many sales have been lost to the average retail yard throughout the country because of the backward selling methods adopted. Selling is entirely a matter of psychology, taken in a general way. The man who wants one or several thousand feet of lumber wants the price per thousand feet and, therefore, the price creates no false impression on his mind. But many men desire but one piece of material, and if they go into a yard and ask the price and their mind is beclouded with the asinine answer that it is worth so much per thousand feet, they either do not buy, or if they do, never call back again regardless of how bad they might want another one piece. In this latter class of trade the element of psychology entirely enters and if properly handled would result in largely increased sales of one or more pieces of lumber.

It is to be hoped that the National will meet with success in its efforts to have retail yards adopt the one-piece price method. It should be as easy for a yard manager to have the prices per piece figured out on all items as it is for a racket store to have the price per attached to all items placed on sale the moment they are unpacked. The Lumber Trade Journal has at various times urged the adoption of the price per piece method of selling lumber as a means of not only increasing the sales at the yard, but of actually increasing the profits on the lumber sold.—The Lumber Trade Journal.

A "Red Hot" Trade Tip is This.

WE have seen it demonstrated in an "intensive" manner of late, just how much the prosperity of the farmer means to the general welfare, not only of our own nation, but that of the entire civilized world—Germany excluded, because that country has yet to be civilized. Therefore, with the metamorphose of the farmer into the modern farm business manager, there opens up a vast field of opportunity for business men in other lines to co-operate in helping the farmer increase his own efficiency. In this particular, the lumber dealer undoubtedly occupies a front row seat because the very nature of the lumberman's business makes him the leader in the work of equipping the modern farm.

But to get back to that farm business office. There isn't any good reason why the farmer should not have an office as completely fitted up as that of any other business man. There is an infinitude of reasons why he should have. The present-day farmer, and the farmer of the future, should and in all probability will, manage his farm pretty much along the same lines as those followed by the merchant or the manufacturer. Therefore he will find need for the same facilities as those used by the general run of progressive business men. There will be farm cost accounting systems. Bookkeeping, crop records, crop utilization records, sales system, profit and loss accounts, etc., all of which call for suitable office equipment.

Perhaps the present farm home does not afford a room that can be converted into a convenient office, therefore the lumberman has the opportunity of examining the farm home, planning the necessary addition, presenting the proposition to the farmer and advancing the necessary arguments to convince the farmer that the money spent for the improvement will be a good investment.

This is just one more idea handed to its readers by the Retail Lumberman. Perhaps we are a little ahead of the times with this, as we have been with many of the progressive ideas we have supplied in years gone by and which we have seen become the cornerstones for present-day business building by retail lumbermen. We will not be surprised to see this latest idea received with enthusiasm by some, with indifference by others, and with open doubt in other quarters—but some day we will see lumbermen supplying the materials to farmers for equipping farm homes with farm business offices.

You can either wait and see—or, you can get busy now, and start this movement in your own community, just as you prefer. But remember, the idea is fundamentally sound and involves a necessity which is the natural outgrowth of changing conditions.—The Retail Lumberman.

Condemn Cancellation on Declining Market.

RESOLVED, That the Ohio Association of Retail Lumber Dealers, through its secretary, shall ask for surrender of membership in said association, of any member cancelling an order by reason of market decline.

The above is one paragraph of a set of resolutions adopted at the recent meeting of the retail lumber dealers of the state of Ohio, and we believe that the Ohio association is unique among organizations of retail lumbermen in the action taken.

The question of order cancellation has been much discussed. It is probable that in no other general line of business has the practice been as common as in the lumber industry. It is not confined to the retailers, either. Many retailers have given it as their warrant for cancelling orders on a declining market that the manufacturers are just as prone to make cancellations on an advancing market, and there is much truth in the charge. As to who started it, there is no way of determining. It is another question of which came first—the egg or the hen.

Possibly, in condemning the practice, the Ohio retailers are taking a step made logical by the relative positions of the shippers and buyers. In the matter of wiping out orders, the shipper has the advantage. He can bring about the same result by delaying shipment until the dealer becomes disgusted and places the order elsewhere. Without absolutely cancelling an order when the market is advancing, the shipper can, by one pretext or another, delay shipping the goods, unless the order also contains a definite contract as to time of delivery. On the other hand, the buyer has no such opportunity. If he finds himself able to buy more cheaply, after he has placed an order, he can only resort to out-and-out, plain cancellation.

Of course, the shipper can always have recourse to the courts. If he accepts an order at a certain price and makes reasonable effort to load it and send it on its way, he can always compel acceptance by an appeal to law. It has frequently been done; but more often the shipper will accept the cancellation and dispose of the material elsewhere, and at a lower price, simple because the cost of litigation is usually greater than the amount of loss involved. The comparatively few cases where the matter has been taken to the courts have established a sufficient precedent, but have not succeeded in bringing down court costs to a point where it is worth while.

A further paragraph of the same set of resolutions reads:

Resolved, That the Ohio Association of Retail Lumber Dealers asks its members to support by buying from such manufacturers and wholesalers who have, and will show a spirit of co-operation with our association in its efforts for square dealing between ourselves, manufacturers, wholesalers and customers.

There is much meaning in that resolution. Between the lines, we may read that the members of the association believe in dealing only with such manufacturers and wholesalers as do not cancel orders on a rising market, or defer shipments; who will not sell to wholesalers who sell direct to consumers, and who do not themselves sell to consumers direct.

In this, the Ohio association is consistent. Since it proposes that no member shall cancel orders without other and better excuse than that the market has declined, they have a right to expect that the manufacturers and wholesalers from whom they buy shall be equally careful in the methods followed in the course of business.

Some dealers assume the right to cancel orders when the market declines, and they do not even offer the pretext that such action is justified by similar action on the part of shippers, when the market is advancing. They continue to do it because they have been able to "get away with it" in the past. If every sale were made a contract, and enforced, it would not be long until the practice would be forgotten.—Mississippi Valley Lumberman.

Some Mills not Doing Full Duty.

THE government needs more fir airplane lumber. While the production of fir cants has been heavy, there are a number of mills eminently able to supply this material, which so far have not come through in the way that they should.

There is no reason why every saw mill that has suitable logs, should not manufacture fir airplane cants. It is not only good business to get out a maximum amount of this lumber, but it is the duty

of every mill man to give his government all of this material that he possibly can.

If a mill does not happen to be cutting at this particular time, the type of logs needed for this lumber, the mill should make it its business to get out the kind of logs necessary.

It makes no difference what inconvenience or how much it may cost, to get at the right kind of timber now, the need is so great that the cost and the trouble, are the last things to be considered.

The mill man or the logger who is not producing this kind of material is not playing fair with the government. Efforts are being made to induce by persuasion every mill to cut some airplane lumber. In case manufacturers are so blind that they cannot see the necessity of coming to the aid of their country, then it is time that more drastic action be taken. Any saw mill which has suitable logs or can obtain suitable logs, and is not manufacturing airplane lumber, should be closed, at least for the period of the war. There is too much can't and too few cants.—West Coast Lumberman.

Interesting Suit Over Lumber Fire

The First Division of the Court of Review—Justice Demers, Archer and Coderre—concluded the September roll recently in Montreal. The concluding case was one in which J. A. Courville, esq., inscribed in review a judgment of the Superior Court, rendered by Mr. Justice Globencky, at Sherbrooke, on April 11, 1917, dismissing appellant's claim for \$4,000 insurance on a policy effected with the defendant-respondent's agent in relation to a furniture factory at Lake Megantic.

The policy in question was originally issued on "lumber" but on renewal, application was made to change it to "schedule." The proposal, it was said, was accepted, the premium paid and an interim receipt or "binder" issued. There was an error on the binder in that the insurance was referred to as being on lumber, whereas it should have been schedule. The change was duly made on the binder, but before the actual policy was returned, fire destroyed the factory and the company at the time ordered its agent to cancel the insurance on the policy as amended. The company paid for a policy of \$1,000, but refused to pay the \$4,000 as on a policy in schedule. It was for \$4,000 that appellant sued for in the court of first instance, and now submits the judgment dismissing his action was in error in holding the defendant established want of authority on the part of the agents to change the policy. It was insisted that the application by appellant for a renewal of the policy, accompanied by the premium, and the receipt of the binder, constituted a contract binding upon the company and an acceptance of the risk at the time.

For the company-respondent it was argued that the judgment a quo was just in law and in accord with fact and ought to be confirmed. Judgment was reserved.

Making Life Pleasant for the Loggers

With music and "movies" the Y. M. C. A. is out to conquer the monotony and isolation of the lumber camps on Queen Charlotte Island, where aeroplane spruce is being manufactured for the government. That the Red Triangle is "on the job" is evidenced by the reports received by Mr. H. Ballantyne, General Secretary of the Y. M. C. A. at Vancouver.

A combined hotel and recreation hall has been erected at Thurston Harbor, reports Mr. D. E. Hatt, the "Y" Secretary for the Moresby Island group of camps. The building is 32 x 32 feet, two storeys, with cottage roof. On the ground floor is the recreation room, 22 x 32 feet, quarters for the Secretary and shower baths. Upstairs are four small and one large room to be used by transients. Mr. Hatt has charge of the building, and he meets the boats which arrive at night and early in the morning. A Y. M. C. A. Committee has been formed consisting of Dr. Smith, chairman, Mr. Benson, and Mr. Berrie, the wireless operator. The movie shows and other entertainments attract the men from long distances. A large quantity of Y. M. C. A. supplies, consisting of stationery, books, magazines, games, etc., are distributed every month, both to the loggers and on board the ships calling at the harbor. Arrangements have been made for entertainments at the outlying camps at Cumshewa and Skidegate, and a program for the winter will also be carried on at the camps in Selwyn, Danan Richardson, and Atli Inlets and Sedgwick Bay.

During August the score or more camps and sawmills of the Masset Inlet district were visited three or four times by the Y. M. C. A. Secretary, Mr. G. R. Welch. His addresses on patriotic, moral and religious lines were well received, and the literature he distributed was eagerly welcomed. At headquarters at Buckley Bay a tent has been set up and equipped, and this will fill the bill until permanent quarters can be secured. The lumber officials have promised to erect a suitable building in the near future. From this centre a news bulletin service is made to all the camps, and the latest newspapers are also distributed, all of which tends to lessen the sense of isolation from which the loggers suffer acutely.

A "Y" hut is being erected at Port Clemens, the headquarters of the Imperial Munition Board, which has the oversight of all the spruce lumber industry of Masset Inlet, and the work is furthered by a committee of the leading business men of the town.

He Will Do Honor to the Position

Hon. M. J. O'Brien, Renfrew, Ont.

Hon. Michael John O'Brien, who was recently appointed a member of the Canadian Senate, has long been known as the foremost citizen of the thriving town of Renfrew, Ont. The new distinction, which has been conferred on him, is richly earned for Mr. O'Brien will bring to bear upon his new duties a sound business training, ripened judgment, clear vision and progressive ideas. Last month he celebrated his sixty-seventh birthday. He is a son of John O'Brien, a native of Waterford, Ireland, who settled at Lochaber, Nova Scotia, where the present Senator was born, and educated at the local schools. At the age of fourteen he struck out for himself, and from an ordinary laborer rose rapidly to be foreman, sub-contractor and contractor on railway work. In the

latter capacity he has built many important lines, including a 120-mile section of the Canadian Northern Railway in Quebec, 50 miles of the Quebec, Montreal and Southern railway, and no less than 800 miles of the National Transcontinental. He is a former Royal Commissioner in connection with the construction of the Temiskaming and Northern Ontario Railway. Mr. O'Brien is a large holder of timber limits and owner of the Renfrew Planing Mills. Among the many prominent positions which he fills are President of the Thunder Bay Contracting Company, Port Arthur; O'Brien Munitions, Limited, Renfrew; Confederation Construction Company; Great Lakes Dredging Company, Port Arthur; Canada and Gulf Terminal Railway and other organizations.

Canadians Cutting Down Duke's Timber

Canadian foresters recently started felling the Duke of Devonshire's woods on the Christworth estate in Derbyshire. It is expected that the work will extend over 18 months or two years. From Scotland there comes the complaint that Canadian foresters are being used to replace the Scottish civilian woodsmen, who, it is said, are more skilled in this work than the Canadians can prove themselves in Scotland. This complaint generally should not be taken too seriously. The Canadian forestry corps now contains only men not of the first category, while there may be many civilian foresters at work in Scotland perfectly fit for full military service. There may be also the same reluctance on the part of Scottish timber owners to part with first-class civilian labor.

Wide Search for Black Walnut

A canvas for black walnut is now going on. From Maine to California they are searching the back lots in every village, hamlet and town for the big walnut trees that have long been thought of little use except for shade purposes. This sudden activity is in response to urgent requests on the part of the War Department for black walnut timber, from which to manufacture gun stocks for the United States army. The fact that there are few, if any, commercial growths of this timber, makes the task before the government most difficult. Added to this, it is now stated that Germany had been quietly, but certainly picking up black walnut timber in this country for years, and shipping it to her own munition factories, with the result that German army rifles are mostly built from American walnut.

A meeting of the executive of the New Brunswick Lumbermen's Association was held recently, when an interview took place with the Provincial Government. A frank and free discussion of the aims and objects of the newly organized Association was gone into with the idea of laying a foundation for better and more friendly relations between the government and the lumbermen than in the past. The members feel quite satisfied that the meeting had a good effect from both angles. Beyond this and a general talk regarding actual organization among members of the Executive, nothing of importance took place. Mr. R. W. McLellan, of Fredericton, who was elected secretary-treasurer pro-tem at the time the association was formed a few weeks ago, has been requested to continue indefinitely.

Wood Preservation Makes Sales

Valuable Help to the Retail Lumber Merchant—Cost of Treatment and the Beneficiaries of Plan

The normal consumption of wood has been decreasing steadily for the past decade—from about 500 board feet per capita in 1906, to 375 feet per capita in 1915. It is estimated that 15 per cent. less lumber was used for building purposes in 1915 than in 1907. In comparison the consumption of structural steel increased 285 per cent. from 1908 to 1913, and 174 per cent. to 1914, during which latter year abnormal conditions prevailed. Likewise the consumption of cement increased 48 per cent. between 1907 and 1915, says K. C. Barth in the "Lumber World Review."

Steel and cement are probably the most important competitors of wood and the large increase in the consumption of these materials indicates not alone satisfactory service, but effective promotion. The general utilization of both products for building purposes dates back but a comparatively short period. Their advent and present popularity is the result of far-sighted educational propaganda on the part of the entire industry involved, and the extension of technical and practical service of a magnitude previously unknown in manufacturing circles. When weaknesses developed these were investigated and eliminated, if possible, or the consumer was instructed how to avoid their recurrence. Only recently authorities in the employment of a cement association promotion bureau investigated failures of concrete structures exposed to salt water and quite candidly discussed cause and effect in the trade papers, advising how such conditions could be avoided. This service is always available to every consumer, be he rural or urban landlord, architect or engineer.

Task for Retail Lumber Dealer.

The results are sufficient proof of the efficiency of the means and methods, and present a lesson which the lumberman may well study. Information and data on the proper utilization of structural wood must not only be available to all classes of consumers, but it should be distributed quite generally among them. This is a task which can be effectively executed by the retail lumber dealer, the doing of which constitutes a service that will earn the appreciation of the customer served, retain and probably increase his patronage, and, what is more to the point, result in increased business.

"The use of competing materials will ultimately depend mostly upon their utility, or service, and cost in comparison with wood." "Utility or service depends in part upon the inherent properties of the materials themselves, and the extent to which these properties can be improved through scientific development." "Dissatisfaction and uncertainty react to the advantage of the substitute" (Report No. 117 U. S. Department of Agriculture.)

One of the well known inherent properties of wood is its natural susceptibility to destruction by decay when exposed to conditions favorable to the development of fungi. This weakness is easily eliminated by the application of coal-tar creosote oil, thus largely removing the cause for dissatisfaction and the advantage which the substitute materials have over lumber because of their claim of permanence.

The Basic Principle of Service.

The promotion of wood preservation by the dealer is the basic principle of service—because it assures durability under adverse conditions. All other service features, such as building plans and specifications, display rooms, modern yards and offices, etc., are of little avail in the competitive struggle unless the product itself is fully fit and equally as serviceable as the respective "substitute material." The preservative treatment of the lumber which will be exposed to decay must be included in the specifications and plans in order to make them a really valuable aid in the promotion of lumber sales. The method of protecting wood from rot, available to the general public, is quite simple and inexpensive. It consists merely of painting two coats of refined coal-tar creosote oil on the timbers or lumber, and the preservative is sold by the dealer with the other material he furnishes for the structure.

It is not the present purpose of the writer to discuss in detail the creosoting of wood as that has been done at length in a series of articles which appeared in this paper last year—but to again call attention to the urgency of promoting the proper use of structural wood, of preventing its abuse due to the technical ignorance of consumers, and an endeavor to overcome the apparent negligence on the part of the lumbermen, probably caused by a lack of appreciation of the importance of this particular phase of good utilization.

Present conditions affecting the building materials market are decidedly favorable to wood, particularly because of the huge demand for steel for war purposes. A splendid opportunity is now offered lumber "to come back," and to regain its former position as the most convenient building material, if a careful vigil is kept by the lumbermen that it is properly used, and not abused in a manner which will cause future dissatisfaction.

The necessity for new structures and buildings of more or less permanent character will no doubt be greater than a casual survey would reveal. Industrial centres must provide for increased activities and the rural communities require numerous new buildings to care for the storage of the huge crops which will be harvested this fall, and the next, and for many years to come. Annual shelters of various types and poultry houses are needed to take care of the increased production of meats, fats, and poultry products. Highway bridges must be built and maintained in order to keep open the highways of the country. For all these purposes lumber will and must be the most available material—and that is the opportunity.

Increasing the Life of Buildings.

In some instances lumber dealers may hear the objection from farmers that the present cost of erecting this hog house or that corn crib is too high. Not only are the present profits from farm produce equally higher and the prospect for prices of materials to advance,

THRIFT—The Evidence of Practical Common Sense.

THRIFT is the enemy of debt.

THRIFT promotes peace of mind, personal comfort, and the good-will of the community in which one lives.

THRIFT, which implies habits of economy, safeguards one against self-indulgence, misery, poverty and failure.

THRIFT brings increased happiness to oneself and family and adds to the real wealth of one's country.

THRIFT induces one to save systematically and intelligently, so that each succeeding day finds one better off than before.

THRIFT is a wise provision for possible emergencies, times of illness or disaster, and a sure protection for old age.

THRIFT is the basis of every large fortune.

THRIFT gives one a gratifying sense of self-respect and progress, and leads steadily and surely to prosperity and happiness.

THRIFT is evidence of practical common sense, sound judgment, and wise prudence, because it is willing to make present sacrifice for future competence.

THRIFT lifts one out of the large class of men who spend all they make, have nothing for the future, and are self-elected victims of daily fear and uncertainty.

THRIFT means care and wisdom in the management of one's resources.

THRIFT develops patient self-denial, so vital to greatness.—Grenville Kleiser.

but by promoting the preservation of the lumber, the resulting increase in the life of the building will tend to reduce the yearly cost to nearly equal that of a similar structure built three years ago.

Treating all the lumber of a hog house, for example, by the application of two coats of refined creosote oil by the brush method would cost the consumer only about \$5 to 7 per thousand board feet, which would be largely off-set by saving the cost of paint for the exterior; would make the building much more sanitary; would make the lumber practically equally as durable as any substitute and would provide for the dealer a sale of from 50 to 100 gallons of creosote oil.

If there is any doubt as to the value of the brush method of creosoting, let it be said that in each wooden ship being built for the great government merchant fleet the points of contact of the ship timbers are brush treated with refined coal-tar creosote oil.

In self defense the lumber industry must promote wood preservation. Thus far the producers of creosote oil have borne practically the entire brunt of the effort to educate the consumers to protect wood from its own natural weakness—decay. In this the Forest Service of the United States Department of Agriculture has been a great aid, but its efforts are naturally limited to providing the information and advice which is only available to the public to the extent that those interested arrange its distribution.

What the Dominion is Doing in Shipbuilding

Budget of News Covering the East and West in Vessel Construction — Progressive Concerns Receive Some Large Contracts—Some Record Achievements

The War Niagara, a wooden steamship built for the Imperial Munitions Board by Fraser Brace & Co., Montreal, was recently launched from their yards. This is the fourth and last vessel built by the firm. The War Niagara is 256 feet long, 43.6 beam and 35 feet in depth, and fitted with 1,500 h.p. triple expansion engines. She is 3,100 tons. The keels for two wooden ships have been laid by Fraser Bryce & Co. for the French government, the company having been awarded a contract for the building of eight ships. The French boats will be 203 feet long, 40 feet beam and 17 feet deep, and fitted with twin screw compound engines. Each is 1,500 tons. The eight boats for the French government have to be completed by July, 1919.

Notable among the many remarkable achievements of American wooden shipbuilders since the U. S. entered the war was the launching at the yards of the Grays Harbor Motorship Corporation of the 4,000 ton government steamer Aberdeen on the night of Sept. 28, just eighteen days after the laying of the keel. For the last sixteen months this company has been engaged in building ships for the Emergency Fleet Corporation, having in that period launched nine vessels. While

"The Victory," a modern Dreadnought constructed of wood and beaver board, which was placed in front of Toronto's city hall during the recent "Sailors' Week" campaign, when over half a million dollars was contributed through the generosity of the residents of the Queen City toward this important fund.

at all times striving for maximum output no attempt had hitherto been made to hang up an special speed records, but under the impetus of insistent telegrams from the Emergency Fleet Corporation asking the company to engage in speed contests the officials of the concern decided that they would show the world what it could do in quick construction.

The British Admiralty announces that the tonnage of merchant vessels completed in the United Kingdom shipyards during September amounted to 144,772, which is 20,000 tons in excess of the figures for August, and has only twice been surpassed in any month of this year. The total tonnage in new construction for the first nine months of 1918 was 1,174,641, as compared with 743,863 in the corresponding period of last year. The total for twelve months ending September, 1918, was 1,594,262, as compared with 957,185 for the previous year. In the second quarter of 1917 the world's merchant shipping suffered a loss of 2,236,934 tons, but in the last three months for which figures are available, namely, June, July and August, the total was 932,556 tons, a reduction of 58 per cent.

There was recently launched at Noel, N.S., one of the handsomest and best built schooners that has taken to the waters on the Nova Scotia coast in a long time. The vessel built by the Noel Shipbuilding and Transportation Co., Limited, is 130 feet long x 35 ft. beam, 13 ft. hold and 502 tons net register. Her masts are of Oregon pine.

She is fitted with stockless anchors and has an immense poop deck. It is understood that she has been sold to Newfoundland parties, who intend fitting her with twin oil engines.

The schooner J. E. Backman was lately launched at Meteghan, N.S. She has been built on the same lines as the Ritcey, which was launched about eight months ago under the supervision of Edward L. Corneau, one of the owners. The Backman is under charter for Buenos Ayres and will load at Digby with lumber.

The wooden steamer War Ewen, the last of the four Imperial Munition Board vessels to be built at the Poplar Island yard, New Westminster, B.C., by the New Westminster Construction and Engineering Co., was recently launched. The company is laying the keel of another of the 1,500 ton wooden vessels to be built for the French government, three of which have already been laid.

The big wooden tug Moresby was recently launched by the Westminster Marine Railway Company and she is considered the best model of a tug ever built on the Pacific Coast. The Moresby is 123 feet in length and when completed will be used in towing spruce logs from the Queen Charlotte Islands as will her sister ship, the Mallett, which will be launched in the near future.

The three-masted schooner Ada A. McIntyre was successfully launched at Moss Glen, N.S., recently. The vessel is owned entirely by Peter McIntyre and his son, Allen A. McIntyre. Mr. McIntyre for a great number of years has been prominent in local shipping circles, and since withdrawing from the sea in 1888 has operated a fleet of vessels sailing from that port totalling altogether over forty. At various times he has built and owned eight vessels. Moss Glen, the scene of the launching, was in former years a well-known shipbuilding spot, and is a desirable location for a shipyard, as on the hills overlooking the timber can readily be procured for framing, etc., and facilities for launching are of the best. Over thirty-five vessels were built at Moss Glen previous to 1891.

Seamen appear to be getting scarcer all the time and wages are making startling advances. Able seamen are now shipping at one hundred dollars per month. The same men, or others equally as good would have shipped for \$25 five or six years ago. Cooks are now getting \$125, and mates can get \$150. Even at these prices some vessels are finding it very difficult to get crews.

Another new three-masted schooner for the Halifax firm of A. Moulton & Co., is the Margaret Louise, which is now nearly ready for launching from Leary's shipyard at Dyaspring, Lunenburg county. She is a vessel of 155 tons net. This well-known shipping firm have added another three-masted schooner to their fleet by the purchase of J. N. Rafuse, which is now at a United States blem is, can we raise enough foodstuffs for the appetites of both the world and the submarines?

Skilled workers in the shipbuilding industry of the country have presented "friendly demands" to the Labor Adjustment Board of the Shipping Board at Washington for an increase in wages to \$1 an hour, double time for all overtime, Saturday half-holiday throughout the year, and ten per cent. bonus for all night shop work. The present wage is approximately 75 cents an hour.

The Port Arthur Shipbuilding Co., has declared an initial dividend of 1½ per cent. on the common stock, payable on October 1st. This company is the successor of the Western Drydock and Shipbuilding Company, and has outstanding the entire authorized capitalization of \$1,000,000 7 per cent. cumulative preferred stock and \$1,500,000 common stock. As it is part of the terms of the original issue of stock that no common dividends are paid until the net surplus, exclusive of redemption fund, after payment of such dividends is twice the annual preferred dividend requirements it can be taken for granted that the company is earning close to 20 per cent per annum.

Additional contracts for Canadian shipbuilding yards involving well on to 50,000 tons are reported. Wm. Lyall and J. N. Green-shields, K.C., of the Wm. Lyall Shipbuilding Co., Montreal, returned from New York recently with orders for 18 1,500-ton wooden vessels. The boats are of a type similar to one now being built at the company's yards at Vancouver. The first of these boats was launched on July 1, following the successful completion of an order for another type from the Imperial Munitions Board. The 1,500-ton boats for the French Government are to be schooner rigged with auxiliary engines.

How One Great Industry Expands

The Dominion Bureau of Statistics has just completed a census for 1917 of the pulp and paper industry throughout Canada, and the figures are particularly timely in view of the current discussion on the paper situation.

Altogether the census embraced 80 concerns, of which 31 were in the manufacture of pulp only, 26 in the manufacture of paper only, and 23 manufacturing both pulp and paper.

The total capital invested in this industry, including land, buildings, machinery, stocks on hand and "working" capital, amounted to \$186,374,905.

The total number of employees on wages was 20,695 males and 671 females on salaries, 1,345 males and 218 females. The total salary and wages bill was \$20,344,286.

The aggregate value of production in 1917 was \$96,248,824. The census covered altogether 36 products, of which the more important are as follows:

	Quantity.	
Pulp.	Tons.	
Mechanical or ground wood pulp	921,081	
Sulphate pulp	161,393	
Sulphite pulp	374,894	
Soda	4,136	
Other	63,467	
Paper.	Tons.	Value.
Newsprint	689,847	\$38,868,084
Book and writing	45,235	9,310,138
Wrapping	50,360	5,646,750
Boards	54,080	3,543,164
Other paper products	900	1,382,205
All other miscellaneous products		3,543,024
By provinces, the distribution of plants is as follows:		
British Columbia		5
Manitoba		1
Ontario		33
Quebec		31
New Brunswick		5
Nova Scotia	4	5

A Few Suggestions of Knife Grinding

By A. T. Deinzer

One could write so much regarding the grinding of knives that when he ceased it would be difficult to tell just what the vital facts were as regards grinding woodworking knives.

More knives are ruined by poor grinding in the hands of the inexperienced than in all other ways. If you heat the knife at all in grinding the temper is changed and the knife often seriously damaged.

The temper of a knife is the principal part of the same. The writer must assume that everybody who uses knives knows that the bevel must be ground in a certain way as far as the dimensions of the bevel are concerned, but the matter of temper is a hidden subject, and ideas differ thereon; so, instead of going into a long discussion of grinding, a few simple facts may be appreciated, knowing that if our readers will do as suggested, they will not alter the temper, at least.

We advise grinding on a wheel plentifully supplied with water. DO NOT HURRY THE WORK. If care is exercised in grinding, and you grind slowly so as never to heat your knives, you will find that they will hold an edge and last, for the temper will be unchanged.

As regards high speed steel knives, great care should be used in grinding these knives. Never use water on the wheel. Use a soft wheel, which wears away rapidly, and grind the knives slowly so as not to heat them.

The grinding of a knife requires unusual skill and long experience, and yet, at first thought, one would not think that this is the case. It is difficult to tell many men employed in woodworking plants that their methods of grinding are wrong, since when one comes out with such a blunt statement as this, not infrequently, and in fact usually, offence will be taken. Consequently, it requires about as much judgment and diplomacy to handle these cases of grinding as it does to be in our President's shoes at this time, and keep things running smoothly.

I hope these suggestions will be received in the same friendly spirit in which they were written, and, when applied, the reader will find that they are all we claim for them.

Newsy Briefs of Much Interest

The Dalhousie Lumber Co., Ltd., Dalhousie, N.B., are making large additions to their lumber mills. The manager is W. H. Priest, and the secretary-treasurer A. B. McKinnon. The directors of the company intend doubling the capacity of the mill, which at present

consists of 18 "Waterous" rossing machines, single band saw, lath mill, edgers, slashers, conveyors, etc.

The Parker Pulpwood & Timber Co., Ltd., have been granted permission to increase their capital stock from \$49,000 to \$200,000, and to change their name to "Continental Wood Products Co., Ltd."

Cedar Products Ltd., has been incorporated, with head office at Amherst, N.S., and capital stock of \$500,000, to carry on business as manufacturers of and dealers in timber, lumber and pulp wood of all kinds, to operate sawmills, etc. Among the incorporators are F. L. Milner, and H. A. Purdy, of Amherst, N.S.

Sealed tenders are being received by the Minister of Lands until the 24th day of October, 1918, for the purchase of License X1412, to cut 1,800,000 feet of fir, cedar and spruce and 10,000 ties on L. 856, Barriere River, Kamloops District. Two years will be allowed for the removal of the timber. Further particulars may be obtained from the chief forester, Victoria, B.C.

Who Am I? Do You Know Me?

By B. C. Forbes

I am the foundation of all happiness.

I am the fount of all prosperity.

I am the parent of genius.

I am the salt that gives life its savor.

I have laid the foundation of every fortune in America, from the Rockefellers' down.

I must be loved before I can bestow my greatest blessings and achieve my greatest ends. Loved, I make life sweet and purposeful and fruitful.

I can do more to advance a youth than his own parents, be they ever so rich.

Fools hate me, wise men love me.

I am represented in every loaf of bread that comes from the oven, in every train that crosses the continent, in every ship that steams over the ocean, in every newspaper that comes from the press.

I am the mother of democracy.

All progress springs from me.

Who am I?

What am I?

I am work.

What Did You Do?

Did you give him a lift? He's a brother man,
And bearing about all the burden he can.
Did you give him a smile? He was downcast and blue,
And the smile would have helped him to battle it through.
Did you give him your hand? He was slipping down hill,
And the world, so I fancied, was using him ill.
Did you give him a word? Did you show him the road,
Or did you just let him go on with his load?

Don't you know it's a part of the brother of man
To find what the grief is and help when you can?
Did you stop when he asked you to give him a lift,
Or were you so busy you left him to shift?
Oh, I know what you say may be true
But the test of your manhood is: What did you do?
Did you reach out a hand? Did you find him the road,
Or did you just let him go by with his load?

—J. W. Foley.

Many Lumber Workers for the West

A party comprising more than one hundred expert lumbermen has just been handled by the Grand Trunk and Grand Trunk Pacific Railways from the province of Quebec, bound for Queen Charlotte Islands, off Canada's north Pacific coast, near Prince Rupert, B.C. These men are to be employed in cutting spruce for aeroplane construction. The spruce on the mainland of Northern British Columbia and on the adjacent islands has proved to be eminently satisfactory for aeroplane production, and Grand Trunk Pacific officials report that the mills along the railroad are unable to keep up with the demand for this class of lumber, which is selling at an exceptionally high price. Every effort is being made by the railroad authorities to insure the necessary supply of men and machinery to maintain the spruce output and meet the large demand of the Allies.

What Lumbermen Must See in Cost of Production

Increased Outlay In Many Directions Reveals That Selling Figure Has Not Advanced Proportionately—Cost of Factory Product

By F. J. Moss

Increased costs sometimes come about in an insidious way, a little here and a little there, none of which, at the time, seem of sufficient importance to warrant issuance of a new price current, but the aggregate of which is sufficient to wipe off the small margin that usually obtains in the sash and door line; but during the past few months increased cost of goods and supplies has been so marked it would seem that even the most careless merchant must see where it is necessary for him to get up or get off.

If we are right in assuming that first or replacement costs (replacement costs being the only basis we should use on a rising market, as we will be forced to use them on a falling market) have not been lost sight of, the next problem of importance to consider is what margin of gross profit must be had to cover present costs of doing business, and if possible, yield a small profit.

We might give comparison showing how much it cost to transact a certain amount of business a year or two ago, and the cost at the present time. But such comparison would only be relative, as the business during the two periods would represent a wide spread in values and tonnage, so that the comparison would offer no explanation of the cause or suggestion of a remedy. Therefore, we submit only comparative figures showing cost of factory product for a given period of 1917 and what would be the cost of the same product, produced under present conditions.

This does not take into account the present labor turn-over, and the reduced production consequent thereto, which is difficult of deterioration and varies in the different markets, according to local conditions, but should be taken into account, as it represents a real and material increased factor of costs.

An Increase of Thirty-one Per Cent.

On figuring the total cost of the lumber consumed for the period of 1917, (being used for this comparison and then figuring what would be the cost of the identical lumber as of August 1, 1918, we find the increase to be 31.4 per cent., (thirty-one and four tenths per cent.) We find the cost of kiln drying and handling the lumber (lumber burden) has increased ten per cent., and that for every hour of machine time in fabricating the lumber the actual increased wages paid to the operative, as against last year, is 9c per hour, and that for every hour of bench time in finishing, the increased wage paid to bench mechanics is 9.4c per hour. Thus we show the exact increase of the prime costs exactly where it occurs.

Nine cents is not much, but 9c per hour per man on nine hours is 81c per day per man, or \$250.00 per year per man, and this applies on jobbing as well as manufacturing labor.

There is also an increased cost in the balance of the factory operation covered by factory burden, and where the amount distributed on the productive man hour basis to cover factory burden has remained fairly stationary for a number of years, the increased cost of labor and supplies now renders it necessary to add 6.5c per hour on machine time, and 7.4c per hour more to the bench time than we were obliged to figure one year ago, in order to cover costs.

Therefore, the total increase on productive cost (in addition to increase cost of material) is as follows:

Machine productive labor per hour	9.0c
Machine burden .. .	6.5

Total increased cost per man, hour machine..... 15.5c

On a 9 hour day equals \$1.39 per day per man.

Bench productive labor per hour 9.4c |

Bench burden .. . 7.4 |

Total increased cost per man, hour bench..... 16.8c

On a 9 hour day equals \$1.51 per day per man.

The various classes of products of the factory will of course be effected differently, according to the lumber and labor entering into the same, but the aggregate of all is somewhat startling, and the results, to those who are not in touch with the situation, will be surprising and disappointing, as it must be manifest to all that the selling price has not advanced with the increased costs.

Comparison of Commercial Burden.

A comparison of the commercial burden, under conditions existing a year ago, and at the present time, is still more discouraging, for the reason that factory costs consist chiefly of material and direct labor, which increases or diminishes more nearly in proportion to the

volume than is the case of the commercial burden, which is made largely of fixed expense accounts that can not be materially reduced, without a complete reorganization and curtailment in plant investment. I believe I am well within the facts when I state that, if we take into account the general advance in salaries and inefficiency of the average clerk now obtainable as well as increased cost of practically everything used in the conduct of the business, that 10 per cent. would not cover this increase. Now then if it costs 15 to 18 per cent. to do business in 1917, and we now have a 10 per cent. increased cost of our commercial expense, which is practically fixed, plus the increased factory cost, which is definite and positive, added to this the greatly reduced production per man hour, by reason of the labor turn-over and quality of labor available, we can form a general idea of the advance that should be made in our selling schedule on a similar volume of business.

Then contemplate a shrinkage in volume of 50 per cent. to 75 per cent with, as stated, but little reduction in fixed expenses, and the cost of doing business will increase so that the former basis of 15 to 20 per cent. will be doubled and possibly trebled.

Timber License Holders Ask Extension

The provincial cabinet of British Columbia was recently waited upon by a number of holders of timber licenses, who asked for an extension of the moratorium for timber fees until August, 1919. They claimed that after holding timber for many years and paying large fees to the government, they are now in danger of being sold out and losing their investments, with the consequent demoralization of the market which forced sales would bring.

A feature of the request for consideration was that a large number of timber holders who are fully paid up and intend to remain so, joined in the request for this concession with those who had been financially embarrassed as a result of the war. With the approaching end of the war, it was represented that such a concession would enable most of the men to avoid the loss of their investments on which they had been paying fees for many years. The government promised to give the request an early and sympathetic consideration.

The delegation pointed out that one handicap was the lack of vessels in which to ship the product. The drastic financial conditions in Great Britain and the United States prevented money being sent to British Columbia to purchase timber areas and thus shut off the only market. The commandeering of areas and mills which had been engaged in cutting fir and cedar had checked the filling of contracts and this had prevented operators from getting sufficient money to pay their timber dues.

Widening Market for B. C. Shingles

F. A. Willis, who has been closely identified with the B. C. industry for the last twenty years, is now at the head of the shingle department of Reynolds Timber, Shipping and Insurance Agency, Ltd., Vancouver. Up to the present this big concern has confined its business in this branch to the Northwest, but is now extending to Eastern Canada and the American market, where the firm's high-grade lumber products are already finding a good demand. In addition the management look forward to a considerable export trade in lumber and shingles with Australia and New Zealand, as well as Europe, after the war, and plans are also being laid to take full advantage of the Panama Canal route for reaching the Eastern Atlantic states, and possibly some section of the Canadian territory as soon as the coming of peace makes it possible to use that waterway for commercial purposes. Mr. Willis was connected with the Hastings Shingle Co., Vancouver, for a number of years, and later managed the shingle branch of Thurston-Flavelle, Ltd., Port Moody. Being an experienced manufacturer of shingles the trade may rely on getting from him a first-class article at all times.

Making Use of All Waste Paper

"The Recovery and Remanufacture of Waste Paper" is the title of an interesting volume which has been written by Jas. Strachan, chemist of the Donside Paper Co., Aberdeen, Scotland. This is a practical treatise on an interesting subject, and the book itself is printed on paper made entirely from regenerated waste paper. The publication furnishes ample evidence that much can be done in the way of conservation of material.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

WANTED—1 in. Cull Hardwood, Beech and Birch. 1 in. No. 1 and No. 2 Pine Culls. State price and point of shipment.

The Hamilton Lumber & Coal Co., Limited,
19-20 Hamilton, Ont.

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

P. O. Box 2624,
Montreal, Que.

Timber Limit For Sale

Small block of limit, timbered with spruce, birch and maple; area four square miles; situated in the Laurentian mountains, district of Ste. Agathe des Monts, P.Q. Sawmill at three miles from the limit, and six miles from Ste. Agathe Ry. station. Estimated about eight million feet B.M. Offers by writing will be received by Mr. George Liboiron, Ste. Agathe des Monts, Que., for the purchasing of the license-rights, till the 16th day of December next. 20-21

Recrudescence of Wood.

Lumber is to be the chief export industry of British Columbia after the war, according to L. B. Beale, lumber commissioner for the government of British Columbia, who passed through Chicago on his way to London. In the offices of the National Lumber Manufacturers' Association he declared it to be his opinion that the domestic demand in the United States during the reconstruction period which is to come after peace has been signed, will be so great that British Columbia lumbermen and those of other Canadian provinces will be obliged to help make up the shortage.

"The reason is not difficult to find," said Mr. Beale. "It is that there is going to be a 'recrudescence of wood,' if that idea is permissible. In other words, wood is going to be used more extensively than ever before in building operations throughout the world. And this is because it is the real building material after all.

"British Columbia forests are going to help materially in supplying this demand that is bound to come after the war. The lumber men of the United States will be busy supplying the domestic needs, and those which are bound to develop south of the Rio Grande."

The Kiln-Drying of Lumber.

This is a new authorized work covering the entire subject, by Harry Doland Tiemann, M.E., M.F. He is in charge of Section of Timber Physics and Kiln-Drying Experiments of the U. S. Forest Service, and is also a special lecturer in Wood Technology and Forestry, at the University of Wisconsin, Forest Products Laboratory, Madison, Wis. This book contains 16 tables and 55 illustrations, Octavo, net \$4.00.

The value of technical knowledge of kiln drying is self evident. This book, as does no other upon the market, gives the reader the most recent and most clearly expressed information. The United States is taking a lead in the adoption of the kiln-drying method and this volume will increase our lead. It is a practical as well as a theoretical treatise.

WALTER HARLAND SMITH
Manager Horse Dept.

Mr. Manufacturer:

Perhaps not this year, but before many months, peace is almost certain.

It will mean a readjustment of trade.

War orders will cease, and manufacturers will be dependent upon their regular lines.

The manufacturer who has kept his name and his products before his possible customers will be in the strongest position. Goodwill cannot be built up in a day.

Now is the time to start an aggressive advertising campaign, to get back the customer you may have unavoidably lost through war contracts.

Let us submit you a proposition to place your products before the lumber trade of Canada.

Review of Current Trade Conditions

Ontario and the East

Market conditions are rather disturbed at the present time, owing to the inauguration of the recent embargo and tardiness with which, up to the time of writing, permits are secured for the commercial shipment of lumber. Gradually, however, the state of affairs created by the car service section of the United States Railroad Administration is adjusting itself, and facilities are being afforded for the uninterrupted distribution of lumber.

While there may be a disposition in some quarters to view the future with a certain degree of distrust and hang back in the matter of sales, those who are doing the largest volume of trade have not lost confidence, and take but little stock in a movement started by a few who either want to unload or are fearful of what the next few months will bring forth. Optimism is necessary in the present situation, but it should be optimism based on a clear conception of facts and the underlying cause of the embargo and the realization that out of the seeming chaos order will evolve just as certain as that tomorrow's sun will rise. The present restrictions are only a ripple on the surface, but because they were entirely unlooked for, they have naturally produced disconcerting developments.

In some quarters there has been a drop of one, two or three dollars in spruce, but hemlock holds firm while a few lines of white pine have softened by a dollar or two. The demand for western stock, particularly timber, boards and shiplap, continues active. While there may not be so much lumber shipped across the border at the present time, owing to the dilatoriness in getting permits, there is no disposition on the part of the sagacious manufacturer or wholesaler who has made a close study of affairs to lose heart as there will be less logs taken out next season than there was this, because the men for the woods are not available and the cost of camp maintenance is ascending so rapidly.

In conversation with several representatives of lumber firms it is learned that a number will not put in more than half the camps which they had last year, owing to the fact that present cost of the finished product is not commensurate with increased outlay in production. Then with the near approach to the termination of the war and the problem of readjustment, far-seeing companies do not want to be caught with too large a stock on their hands. They are confident that prices will hold for a while, but eventually they will decline, although not to the level which prevailed anterior to the war.

Wages, too, will fall, and the cost of supplies decrease, as every grade of goods that has been conserved for the feeding of the men, and impoverished countries like Belgium and France and Serbia, will revert to their normal channels. Several lines of labor that have found a short route to comparative wealth in munition plants and other productive agencies connected with the war will enter new spheres of activity, but with lessened remuneration.

The building situation does not show much improvement, and on the whole there is a disposition to go slow. But those who have given close study to the trend of affairs and can accurately foresee readjustment and re-establishment, so far as it is humanly possible to do so, believe that, after the present dislocation caused by the recent embargo and the prospect of an early cessation of hostilities have been weighed, it will be found in every instance that those who stay with the game and keep up their courage, will be the winners in the end. Going off at half-cock or being stampeded into hurried action seldom gains one anything, and shrewd observers fully believe that the recent order issued by Director General McAdoo at Washington was for two distinct purposes, one of stopping all cars in transit, which resulted in congestion at every terminal, and the other to prevent any accumulation that might arise by bringing the movement of lumber in the industrial territory under such control as will prevent speculative shipments, delays in cars and other elements of waste.

It is now assumed that the embargo was not to check the movement of lumber or other forest products, but merely to control it, and while the measures taken have been radical, if there is not too much red tapeism and delay in issuing the necessary permits to consignees, everything should work out all right and that speedily.

According to latest reports there is every indication that the present embargo on commercial shipments of lumber will remain in effect all winter. The necessary permits are now being obtained more freely. The market for lath continues dull and there have been some special offerings to clear our stocks. It is stated that a well-known firm has

received a large contract from the French Government to supply several million feet of one and a half inch birch.

A number of sawmills have finished operations for the season and others will close down at the end of the present month. There have been a large number of representatives from both Coast and Mountain mills in the east during the past few days seeking an outlet for B. C. stocks, which, owing to the slackened demand from the prairies, is now being offered at attractive prices in the eastern provinces.

United States

Recent rulings of the War Industries Board have had their effects upon the building situation generally, and practically suspend all operations in that line not directly or indirectly essential to war requirements. Prices generally speaking are remaining firm with practically the entire demand emanating from government sources.

Due to these new conditions arising, as well as recent embargo rulings, many firms are refraining from quoting present market prices until the trade has become more settled and adjusted to existing circumstances. As the embargo is more thoroughly understood the keen apprehension at first felt is gradually disappearing, as it is shown that under present production conditions it really does not mean a reduction in the volume of business transacted but merely that more care must be exercised in selecting one's customers; and if this is done the manufacturer should nevertheless be able to market all he can produce. This again shows the wisdom of diverting manufacturing capacities as much as possible into essential channels, the manufacturer whose work directly or indirectly enters into relationship with the government's war program almost always being immune from anything in the way of regulation that may arise. It is true that there always is a class of stuff that cannot be marketed in these channels in sufficient quantities to prevent accumulation, but the recent order that farm construction valued at less than \$1,000, and repair work up to \$2,500 can be undertaken without permits, doubtless will care for a part of this stock, and a diligent watch of market conditions and opportunities, which arise constantly, is bound to result in finding a profitable outlet for even this stock.

To watch the market for opportunities to engage in essential work and for new outlets for side lumber should be the policy of every manufacturer, says the "American Lumberman." The government still requires immense quantities of lumber for various construction purposes, both military and industrial. The war program, although it has progressed beyond the dreams of many, is not yet complete; the government is taking particular pains to rush shipbuilding and to secure airplane stock, and recently has placed a fair-sized order with West Coast mills for car material, said to be only the forerunner to additional ones—all this merely to illustrate that the manufacturer is not wholly dependent on the ordinary commercial market.

In hardwoods the first shock of the embargo order has been absorbed; permits are beginning to come through in considerable numbers and the movement of hardwood lumber into embargoed territory is steadily increasing. Orders from the government and its contractors of course predominate. Manufacturers of army trucks and wagons are the principal buyers just now, they calling mostly for heavy stock, and box lumber also moves in quantities. In many sections war orders are so heavy, it is reported, as to absorb the entire output, precluding the possibility of commercial orders being accepted. The commercial markets generally are slow any way, as uncertainty as to their classification as essential or non-essential producers causes many consumers to buy sparingly and only for immediate requirements. It is expected, however, that the government will shortly undertake a definite classification of essential and non-essential industries, and with uncertainty thus removed a great increase in commercial business is expected, to the benefit of those mills not working entirely on government orders.

As reported in the monthly stock report of the Hardwood Manufacturers' Association of the United States, stocks of hardwood in general show increases over stocks on hand August 1. In a number of woods decreases are shown, but the increases outnumber the decreases by a good margin. The report for all oak shows a decrease in the eastern territory but an increase in the southern territory. The eastern mills report a decrease of 63,000 feet, or 1.17 per cent. The stocks on hand amounted to 68,013,000 feet, of which 17,682,000 feet were green and 50,331,000 feet were dry. Of this 54,747,000 feet were unsold. Oversales reported were 2,491,000 feet. Southern mills reported were 2,491,000 feet. Southern mills reported an increase of

3,039,000 feet, or 10.08 per cent. Stocks on hand amounted to 48,690,000 feet, of which 8,700,000 feet were green and 39,990,000 feet were dry. Of this 42,51,000 feet were unsold. Oversales amounted to 1,673,000 feet.

Great Britain

The general position of the hardwood market continues firm, with no indication of any change taking place. The continual paucity of fresh arrivals, and the absence of stock of every kind, has naturally a very disturbing effect on the trend of business. Values remain high, and future prospects will be marked by the progress of the war. Ever since the outbreak of hostilities, the imported timber trade has suffered materially through the shortage of shipments coming forward. Until more tonnage and freight accommodation is provided for bringing forward the quantities of imported timber, now so urgently needed, the general situation of the market will remain unchanged.

With regard to the home-grown timber market, considerable progress is being accomplished in respect of felling and transporting the trees to the sawmills. The weather conditions continue ideal for outdoor work, consequently the state of the market for native timber has a fairly healthy tone. In some districts the quantity of trees being felled has reached a large volume, and although the vast proportion is for government requirements, yet there appears to be an increasing supply for private consumption, in spite of the various orders controlling the output.

Parcels of teak and a consignment of lignum-vitae exhaust this week's import list, apart from the huge quantities of high-class lumber brought in by the government for war purposes. This latter is coming forward in undiminished quantities, and is selected with a view to economy in working, as only prime goods are being shipped. But

from the business point of view the government importations have only a secondary interest for operators in foreign hardwoods. What concerns the latter from the business standpoint are the opportunities that are now afforded for dealing in the very limited stocks on hand and also what prospects the future has in store for them.

From what can be gathered, there is a fair enquiry in the country for plain oak, poplar, gumwood, and cypress. The two first-named items are in best demand at the moment, but all descriptions are saleable at present market valuations. The timber is required chiefly for Government work, although, quite independent of this, an enquiry from private manufacturers is in evidence. It is obvious that stocks now privately held will not be able to cope for any length of time with a demand of this kind, and, as there is every likelihood that the need of imported hardwoods will be sustained while the war lasts, it is evident that some decision will of necessity have to be come to in order to stabilize the position. What this decision will be is of very great interest to members of the hardwood branch of the trade.

The conferences lasting over several weeks that have been held between the Controller and representatives of the hardwood importers have not at the time of writing reached a point that has enabled an official pronouncement on the subject to be made public. The delay has been due to the complex nature of the problem to be unravelled. Not one question, but a series of questions, has to be answered before action can be taken. But it is understood that the discussions are nearing the end and that the trade will soon be in possession of the official conclusions and the proposals for regulating future trading.

The August stock lists show only one hardwood item with any importation to its credit. This is teak, of which 13,000 cubic feet was imported during August, and the same quantity went into consumption. The balance of stock on hand is given as 35,000 cubic feet.

HOME AND ABROAD**

Optimistic Features of the Ottawa Market

The reinstatement of previously cancelled shell box orders, and the prospect that further new contracts for the six-inch box would soon be let by the Imperial Munitions Board, furnished the two optimistic features of the Ottawa lumber market during the opening period of October.

The closing days of September and the first part of this month did not shown promise of a good fall trade. The expectations based on hopes held in the late spring and early summer months, fell much short of the mark and did not materialize. There were a few orders here and there but the general volume of business was nothing to write home about. A few shipments, under license, went forward to destinations in the United States.

General business for the period could hardly be said to be any better than during a corresponding period a year ago. Reports from the trade agreed that the decline was largely or wholly due to the operation of the newly imposed American embargo, which some reports stated is working a hardship in more ways than one.

Besides holding up shipments and cutting off business, the correspondent of the "Canada Lumberman" has heard the complaint that it is piling up the demurrage charges to plants and establishments. "Every time they apply a new embargo it costs us about a thousand dollars, and the railways get most of it," said Mr. Mayno Davis, of the McAuliffe-Davis Lumber Company. At the time the new American order went into effect this company had about thirty carloads on the tracks waiting to be planed. They were held up and demurrage had to be paid.

The woes of the trade, unfortunately, did not begin nor end with the decline in orders, inquiries and sales. An epidemic of Spanish influenza swept over the city, necessitated the closing of schools and the theatres by the Board of Health, and caused considerable disruption in the staffs of the mills, and manufacturing and woodworking plants.

The prevalence of the epidemic, together with the exceptionally wet season, which will likely hasten its spread in the woods, caused some lumbermen to take an anxious view of the woods situation. The roads into some camps are reported as being very bad, and in several places little short of quagmires. If such conditions prevail much longer the cut of the Ottawa Valley will fall away below normal, and considerably less than what the reduced cut of the 1918-19 season was expected to be.

The labor situation, both in the woods and at manufacturing plants, leaves much to be desired. The class of help offering for woods work in the Ottawa district this fall was reported by lumbermen to

be no better than a year ago. Some of them are doubtful if it is as good. Mr. P. C. Walker, of Shepard and Morse, said that he did not think the move made by the Government to have persons, exempted for farm work for the summer months, being transferred to the woods for the winter, would amount to much. "A lot of these men will not go into the woods, and when you get them there they are not real woodsmen," he added.

Though the demand was slow, prices were generally reported as holding firm. Some opinion was that the lessened amount of stock on hand would not permit of a drop in price, even if the American embargo continued. On the other hand, the writer has heard of a sale of 200,000 feet of spruce on which the price was cut from two to three dollars per thousand. The story went that the spruce was purchased at \$35 per thousand and originally cost the owner \$40 per thousand. The irony of the whole situation was that the purchaser previously disposed of about 10,000,000 feet of various grades to another plant at \$40 per thousand.

Notice for the woodworking plants to resume work on the cancelled shell box orders was received during the first week of October. The work is not to go ahead as fast as formerly, and deliveries will be slower. This helped out to some extent the plants which had to release part of their staffs, and disrupt their organizations when the order was cancelled. To get back to the state of organization they left off at would take the plants quite a while, as their men have drifted away, but, as the new organization is hardly as good as it was, the box makers think that with slower deliveries, they will manage to get along. With the continuance of the contracts the wood supplies previously on hand will be consumed. The reinstatement of the contract, it is understood in Ottawa, applies to all plants in Canada.

The John R. Booth and W. C. Edwards sawmills continued to partly operate during the first week of October. As labor grew scarcer the Booth mill closes down one saw after another.

Demand is Rather Slack in Montreal

With the exception of the B. C. section, the market in Montreal is dull. There are two main causes for this condition—the continued slow demand for building account, although it has improved somewhat, and the embargo on lumber exported to the United States. The routine necessary to obtain the permits for shipments over the border has involved a certain amount of interruption to trade, and also a falling off in orders.

The greater activity in the B. C. market is due to the recent placing of additional shipbuilding orders in the province of Quebec, and

"Bears testimony to the value of Klim"

"Over there," where transportation is the big problem, and food value the great necessity, Klim has proved up in unmistakable manner. It has shown itself the one form in which the full food value and natural flavor of pasteurized separated milk can be carried thousands of miles over land and sea without deterioration. The Klim that was served to soldiers and civilians in France was as fresh and sweet as that which is being made today in our five plants here in Canada.

You'll discover, if you try Klim in your camp, that it can solve every milk problem for you. Bulks small, weighs little, never spoils in any climate, no waste, cheaper, has the natural flavor unchanged.

Klim is Genuine—The Flavor Proves It

Canadian Milk Products Limited
Toronto, Ont.

August 20th, 1918

Gentlemen:

Please accept our grateful thanks for your donation of 3 cases of Klim for French relief work. This generous gift will gladden many a heart in poor stricken France. "A true gift of Providence," is how one writer expresses the value of Klim.

The other day we received a letter from one of the doctors who is working in the front line clearing station who says that Klim is absolutely invaluable, especially for gassed men, and he says there is nothing we could send which is a greater help in their work. Klim is used in France for badly gassed and wounded soldiers, for babies, for the sick, and particularly for tubercular patients. Nearly every letter that comes to us from France, whether from refugees, soldiers, doctors, or surgeons in charge of hospitals, bears testimony to the value of Klim and brings a request for more. We feel that such remarkable unanimity of opinion proves the worth of Klim beyond any doubt.

Faithfully yours,

THE FRIENDS OF FRANCE.

(Sgd.) Mrs. A. E. Wells,
President.

NEARLY THREE TIMES AS MUCH FOR YOUR MONEY

Lumbermen!

When ordering your Camp Supplies consider this:

- 1 lb. of beef liver contains 602 calories.
- 1 lb. of average boneless beef contains 623 calories.

(Canada Food Board)

But as 1 lb. of carcass beef contains only about 70 per cent. of boneless beef, one lb. of average carcass beef contains only 70 per cent. of 623 calories—or 436 calories. The relative nourishment therefore stands as follows:

- 1 lb. of beef liver contains 602 calories.
- 1 lb. of carcass beef contains 436 calories.

Now you can buy 2 lbs. of beef liver for the price of 1 lb. of carcass beef.

Therefore the money which buys 1 lb. of carcass beef, or 436 calories, will buy 2 lbs. of beef liver, or 1204 calories. That is, you get nearly three times as much for your money when you buy beef liver as you do when you buy average carcass beef.

"A word to the wise is sufficient"

Canada Food Control—Blanket No. 165

although many orders have been put through, the demand still continues.

The building season is now getting towards a close. It has not been a good one, but the total permits make a better showing than at one time seemed likely. Last month the permits were valued at \$280,325, an increase of \$29,367, while for the year they amounted to \$3,988,263, a gain of \$187,598. The outlook is better than it was owing to the contemplated construction of two or three very important industrial buildings, one being for war purposes.

All indications point to a still further shrinkage in the cut as compared with last year. A prominent St. Maurice Valley operator states that the companies there find it increasingly difficult to obtain men for the bush, and that the offer of high wages has not resulted in anything like the numbers of men required coming forward. The heavier cost of labor and the ever increasing cost of provisions will mean a very high rate for getting out the logs, and this, combined with a very short cut, must result in enhanced prices of lumber.

Exports to Great Britain continue to be on Government account, a considerable quantity of B. C. fir going to the other side.

Complete Harmony in Lumber Ranks

THESE are portentous times in the world's history and likewise portentous in the history of the lumber industry. If there was a time when full co-operation and unity of action are necessary in the industry that time is now. Government control of prices, of transportation, of labor and of materials, and the heavy demands for forest products that are essential to the winning of the war, make it necessary for the industry to co-operate fully with the Government and nowhere have we found in the industry in any section of the country a disposition to do otherwise. But to get effective results in co-operation with the Government there must be full co-operation in the industry itself and its members must be in full accord, each willing to forego his personal opinions and his personal feelings for the good of the whole and for the sake of maintaining harmonious relations with representatives of the Government having to do with the lumber trade.

Unfortunately there have arisen recently some misunderstandings between representatives of Government and of southern pine that have in turn led to some regrettable differences between members of the industry itself. This breach should not be permitted to widen, but the big, patriotic leaders of the industry should throw themselves into the breach, close the gap and restore the harmonious relations that heretofore have existed. If representatives of the Government have done an apparent injustice to the industry this injustice, in order to maintain harmony, should be borne patiently and an earnest endeavor made to present the facts in such a way that justice finally will be done. Such presentation can be made only with a united front, and we appeal to the men who are in the forefront of the battle, as it were, to get together, bury any differences that may have arisen and with a unity of purpose and a spirit of co-operation that can not be denied continue to present the real facts to those in authority at Washington until definitely favorable results have been obtained.

In this connection it may not be amiss to direct attention to the great need in the industry to-day of an effective, well fortified and properly administered national association, a body that can speak with the voice of authority as representing the entire industry—American Lumberman.

To Build or Not to Build Now?

THOUSANDS of prospective householders had planned the construction of their future homes just prior to the outbreak of the war, and the plans have ever since been filed away awaiting a more favorable time for perpetuating them in wood, brick or stone, says George Ethelbert Walsh, in the American Builder. The problem facing them can be summed up in two sentences: First, is it patriotic to take skilled labor away from the more immediate necessities of the day; second, on account of the high cost of all building materials and labor, will it not pay to wait until the days of peace before beginning construction?

Architecture as a profession is in a condition of suspended animation, waiting for the building boom that must inevitably follow the return of peace. Many of the profession have volunteered their services, and are at the front or in camps. House building is in about the same condition as architecture, except that carpenters, masons, plumbers and steel workers are commandeered for our shipyards or other important government work.

England long ago realized her mistake in stopping all building operations when war broke out, and as a result of it she is facing the most serious housing problem of the age. She is now making stupendous effort to catch up and get houses built in the shortest possible time. We have already approached a similar crisis, and Wash-

ington is busy trying to encourage and direct in a wise way the construction of buildings, first, for labor, and, second, for the surplus population of the country.

Nearly all of our cities report an approaching crisis in the housing facilities. In New York City alone it is estimated that a surplus population of two hundred thousand must be provided for each year, and if the buildings to accommodate this number of people are not annually constructed there must be overcrowding or worse. The same is true in all of the other cities. Growth of population demands increased housing facilities. One cannot be checked without seriously interfering with the other.

In view of these conditions, these hard and fast facts which cannot be disputed, the question of whether or not it is patriotic to build in war times answers itself. It is a part of our home duty to see that the increasing population is adequately housed. It cannot be ignored without inviting social disaster. Speculative building is not desirable in these times. Risks of invested capital should not be invited, nor permitted. But legitimate house building on a scale commensurate with the growth of the population is as patriotic as building factories or doing Red Cross work. There are in every town and city many skilled carpenters and builders who are too old to engage in war work, and their employment in their trade should be encouraged. The man of sixty and over is being drafted into many commercial lines, which a few years ago despised taking on any who had passed the period that was popularly understood as "dead line of efficiency." Now the old men are having their day again. Then why not given the builders their chance?

The high cost of materials and labor has dissuaded many from building. They are firmly of the opinion that after the war prices will go down, and they can build at one-third the cost of to-day. This delusion may as well be shattered now as later. The price levels of labor and building material that prevailed before the war have gone forever, or at least for such a long time in the future that it is idle to speculate on it. Any architect or builder who remembers the conditions that prevailed for years after our Civil War will smile at the snap conceits of some of the young men who predict a big drop in prices of materials and labor the moment peace comes.

And if our Civil War produced a long period of high wages and materials, how infinitely more will the same conditions be repeated by this world-wide conflict!

Impending Problem of Food Shortage

The facts are that we, as a people, are not interested in the question of food production; only the subject of food restriction arouses us. Lumber dealers, perhaps more than any other class of tradesmen have to do with the farmers. They know the difficulties he encounters. His business is a gamble, pure and simple. He toils and sows, only to find he has guessed the season wrong, or misinterpreted a condition. What was a good rule one year is not the next.

The people need to be kept fully aroused to this impending problem of a food shortage. Are we handling the question right? A recent order was made upon all farmers to market their wheat at once, not reserving enough even for seeding next fall, so great is the present necessity.

In many sections there was sullen acquiescence, because, perhaps, the spirit in which it was given was misinterpreted. It will not do to create antagonism with this element. Or, if one says the farmer should be patriotic and should not complain, the question arises what would be the result if the farmer failed to sow a big crop this fall through pique or a rough handling of the matter?

The public, as stated, is inclined to pay too much attention to food control and not enough to production. If many lumber dealers, and even farmers, had a proper conception as to the great scarcity of cereals, they would abandon many of their present efforts and do everything in their power to aid in getting out monster crops of corn this spring upon which the nation must rely next winter. It should be explained to them that a large ship of 1600 tons and over is being sunk every twelve hours, and that, counting all classes of ships, large and small, one is going down every seven hours. If the topic is not now of interest, the day is not far distant when it will be the most engrossing subject of all. The proclamations of the various food administrators indicate it. If the wolf is at the door we should take every possible step to strangle him.—Lumber.

Sealed tenders are being received by the Minister of Lands until the 24th day of October, 1918, for the purchase of License X807, to cut 1,537,000 feet of cedar, spruce and balsam on an area adjoining L. 5345, near Tumbledick Creek, Cariboo District. Two years will be allowed for the removal of the timber.

Taylor & White, Elm Street, White Head, N.B., recently lost their sawmill by fire. The loss is estimated at \$3,000.

The Early Bird Catches the Worm and hath a full crop

THERE is no doubt but that a serious shortage will be felt by the lumbering trade in securing supplies of woollen goods for their men owing to the enormous demands made by the various Allied Governments for the Siberian Expedition. We are still in a position to take care of your wants in the lines you have always looked to us to protect you for, but for how long we cannot say—so advise early placing of orders sufficiently large enough for several months to come.

To-day is none too soon.

H. A. Hamilton, accountant of Hart and McDonagh, Toronto, recently underwent an operation and has been seriously ill.

David Brocklebank of Arthur, Ont., is in the market for a portable saw mill capable of sawing railway ties, shingle bolts, etc.

The foundations have been started for a new shipbuilding plant at Goderich which will cost \$75,000. G. C. and W. H. Hutchinson are the owners.

It is rumored that the plant of the Peerless Pulp Co. at Thorold, Ont., which was visited by a serious fire a few months ago, will be rebuilt at a cost of two hundred thousand dollars.

The Elbow Lake Company, Elbow Lake, Ont., which mill was erected last year, has completed its first full season of sawing, and cut about two million feet of red and white pine.

Work is proceeding on the erection of a box and barrel factory, which is being put up in Owen Sound by the Northern Bolt, Screw and Wire Co. The structure is of iron and frame construction, 110 x 40 feet.

The Monteith Pulp and Timber Co., who handled about forty thousand cords of pulp wood during the past season along the T. and N. O. and the Transcontinental lines, and operate a saw mill on the Driftwood river, intend running their plant all winter.

The main manufacturing plant of the Canadian Wood Products Limited, 1000 Gerrard St. E., Toronto, was recently visited by fire and destroyed. The company expect to be in a position to resume the manufacturing of shell boxes in about a week and contemplate the erection of a new factory at an early date.

There has been a substantial increase in building operations in Toronto so far this year over last year. During September the total of the permits issued was \$978,111, as against \$650,271 for the corresponding month in 1917. The total value of permits taken out during the first nine months of the present year is \$6,750,909, as against \$5,588,854, covering the same period in 1917.

A provincial charter has been granted to the Shortreed Co. Ltd. with a capital stock of \$40,000, and headquarters in Toronto. It is empowered to buy and deal in lumber, timber and wood of all kinds. The new organization takes over the mill and limits of the late Gideon Shortreed at Kearney, Ont., who operated for many years under the name of the Shortreed Lumber Co. and those interested in the newly-formed concern are principally the heirs to the property. J. D. MacNeill of Kearney is the manager of the company.

The Thomas Pink Co. of Pembroke, Ont., whose factory was destroyed by fire some time ago, is rebuilding, and expects to be in operation in it by the end of November. In the meantime the company has a temporary building in which lumbering and driving tools are being made and all orders are being filled as usual. The company reports the lumber tool business better than it has been for years. In regard to the labor situation the firm states that it is pretty hard to get men, but so far everything in the help line has gone very well.

The building of ships in Toronto harbor is here to stay, and will develop to a much greater extent. This is evidenced by the amount of money invested by one firm alone. Recently the Dominion Shipbuilding Company launched the steamer St. Mihiel, the first of five vessels of a similar character, which means that hundreds of men will be employed during the winter months. This firm has been investing money in equipment day after day until now they have nearly two million dollars invested in machinery. The vessel that is now in course of construction will be slipped into the water in about four weeks, by which time they will also have ready for opening a large machine shop.

John T. James, of Bridgeburg, Ont., who owns the Crystal Beach Planing Mill and Lumber Yard at Ridgeway, Ont., a saw mill and general store at Whitehall, Ont., and the 20th Century general store and lumber yard at Bridgeburg, Ont., in renewing his subscription to the "Canada Lumberman," cites an instance of prompt G.T.R. service. He says that car No. 302,161, containing 27,405 feet of spruce lumber, was billed from Whitney on the Canada Atlantic division, on September 24, and he was notified of it being placed at Ridgeway on September 29. The car was ready for other service on October 1st. Mr. James adds that such excellent time helps materially in the car shortage problem.

The annual meeting of the shareholders of the Spanish River Pulp and Paper Mills was held recently in Toronto. In reply to a question from one of the shareholders, the president, George H. Mead, stated that he believed the company had completed all the contemplated additions and extensions to the property. There would, however, inevitably with an industry of the magnitude of the Spanish River Company, be betterments and slight additions to be made from time to time. The amount expended in improvements included the extension of the ground wood mill at Sturgeon Falls, the completion of the fourth digester at the Soo and the extension of electric power at Espanola. The company had always hitherto had an unbalanced plant. Ground wood supply being the basis of successful operation, the directors had always had in mind a programme insuring a surplus of ground wood, and the company now found itself for the first time in that position. The salable products were now running 500 tons a day, the mills now having a capacity of 600 tons a day.

Eastern Canada

Among the new industries is that of the Pouliot Co., Limited, who intend erecting a saw mill and rossing plant at Bagotville, Que.

It was reported some time ago that the Brown Corporation, who operate a large pulp mill at La Tuque, Que., intended erecting a big paper mill. The company state that no such plan is at present contemplated.

Freeman Maxwell Eddy, a resident of New Brunswick for the past thirty years, died recently. He was 55 years of age and a native of Bathurst, N.B.

Recently he had been employed in the shipyards and he had been connected with the shipbuilding industry all his life.

The office of the Quebec Forests Products Company has been removed from Quebec to Montreal.

Tenders have been received by the Quebec Streams Commission for the building of a storage dam on the river Jacques, which will cost \$250,000.

Good progress is being made on the construction of the new sulphite plant of the Kipawa Fibre Co. at Kipawa Lake, Que. The mill will have a daily capacity of one hundred tons of bleached sulphite.

Mrs. Lillian Peters, of Kedgwick, Restigouche Co., N.B., and Alphonse Thibault of the same place, have formed a partnership to carry on a lumbering business under the name and style of the Gulch Lumber Co., with head office at Peter's Siding Restigouche.

Supplementary letters patent have been issued increasing the capital stock of the Parker Pulpwood & Timber Company, Limited, Montreal, from \$49,000 to \$200,000. The name of the Company is changed to that of the Continental Wood Products Company, Limited.

Pte. E. Madden, who was formerly employed in Steton, Cutler & Company's lumber mill, was killed in action; according to information received by his sister-in-law, Mrs. Mary Dixon of St. John, N.B. Private Madden was a native of Scotland, and at the outbreak of the war returned there and enlisted.

The following comes from a reliable source in Emberton, Compton County, which is on the U. S. border. The lumber business is greatly handicapped in this section, and, in fact, all along the Canadian border, New Hampshire, Vermont and Maine, on account of the big inducements which the American lumber companies are giving out, especially to the young men who will soon be eligible for military service. These young men are not only offered large wages, but are guaranteed to be exempted from military service for at least two years if they remain on the other side. Of course, the promise of military exemption may be imaginary, but it is certainly working well for the Americans, as they are going over from Canada in large parties every day. The military exemption promise seems to be the greatest drawing card, as several lumbermen on this side have promised to meet the wages, but still the young fellows will not stay.

The pulp and paper industry has expanded very rapidly in Canada during the past ten years, says Dr. J. S. Bates of Montreal, and it appears that Canada is destined to become perhaps the leading country in the world in the manufacture of pulp and paper products from wood. This is largely because of our extensive natural resources of waterpowers and suitable tree species. It is important to point out the opportunities and responsibilities for Canadian engineers in this technical industry. The consumption of paper increases so rapidly from year to year in the more highly developed countries that there is no indication of slackening development, at least for some years to come. Canada now has a total of about 90 mills, many of which are large and of modern design. The export figures of the calendar year 1916 show that pulpwood, wood pulp and paper have increased to nearly half of the total export value (approximately \$100,000,000) of all forest products with the exception of the small proportion of specially manufactured articles.

Western Canada

Lumber Products Ltd., Brunette St., New Westminster, B.C., are making alterations to their lumber plant at a cost of \$120,000.

The storehouse of the Beaver Lumber Co. at Brant, Alta., was recently destroyed by fire at a loss of \$6,000. The company will rebuild.

Over 200 sash and door men walked out on strike recently owing to their being unable to secure any agreement from their employers regarding increased pay. They claim the increased cost of living is the reason for their demand. They also ask a uniform eight-hour day in place of the alleged irregular hours now prevalent in Winnipeg.

After being under construction for over two years, the sulphite pulp plant of the Whalen Paper & Pulp Mills Limited at Port Alice on Quatsino Sound, is now in operation. The machinery installed by the company provides for a production of 65 tons of pulp per day, but the area of the plant will permit of this production being doubled if necessary. The entire output is sold in the United States and in the Orient. The Whalen Company also manufactures lumber at this new mill. A total of 700 men are employed.

According to recent advices serious curtailment of the shingle mill output of British Columbia will result from the placing of the embargo by the United States Government on all forest products shipped east of the Mississippi and north of the Ohio Rivers, according to the views expressed by manufacturers of shingles at the coast. Extra high costs of both labor and material will be contributing causes for uncertainty in the lumber trade. Large quantities of lumber have been shipped in the past to the territory which is now closed to Canada.

The British-Canadian sawmill on Lulu Island near New Westminster has been disposed of. The magnificent plant and machinery contained in the mill buildings have been sold and will be dismantled forthwith. The mill was erected some years ago under the management of Mr. F. L. Buckley, now head of aeroplane spruce operations on Queen Charlotte Islands. A feature of the plant was the equipment of electrical dynamos for each separate lumber-cutting machine. The mill ran only about three weeks. The plant cost more than a million dollars, it is reported.

A. L. Williams, representing C. Leary & Co., London, Eng., is spending a few weeks in Canada and United States, calling upon leading representatives of the lumber industry in regard to export after the war, which, he predicts, will be over by August next. He says that England is half a million houses behind in her normal building activities, and there will be an enormous demand for Canadian spruce and red and white pine. The business sentiment at home is strongly in favor of trading with the Dominions, who have rendered such gallant co-operation in the present struggle. There is, in Mr. Williams' opinion, no reason why four or five times the amount of timber that was shipped before the war cannot be exported at its close, and with the present progress in shipbuilding in Canada, United States and Great Britain there is little fear of sufficient ocean tonnage.

Uniform Rules for Hardwood Inspection

One set of rules for the inspection of hardwood lumber purchased by the Government is desired by the officials of the lumber administration. This fact became known recently, and at the same time it was learned that in consequence officials of the National Hardwood Lumber Association and the Hardwood Manufacturers of the United States met in conference in Chicago recently in an effort to decide upon some uniform rules to apply to such purchases.

It is said that at this meeting Edward Robinson, president of the Hardwood Manufacturers of the United States; Frank R. Gadd, M. W. Stark and B. B. Burns, of that association, conferred for two days with the executive committee of the National Hardwood Lumber Association, but that they came to no definite understanding. The report now is that Charles Edgar, the director of lumber, has definitely mandated that as soon as possible these organizations come to some understanding which will result in the adoption of a uniform set of inspection rules to apply to all government purchases.

Definite Outline in Building Operations

Until quite recently there has been considerable haziness in the minds of all connected with the lumber and building industries as to the precise line of demarkation between so called essential and non-essential construction; or, to adopt the later and more definite terms, between war and non-war building enterprises, says a recent despatch from Washington. The farm building field especially was a sort of twilight zone befogged by various rulings, interpretations and surmises.

Although practically wiping out the relatively unimportant residue of what is generally termed normal building for the remainder of the war, there is a sense of relief—that recent governmental orders and interpretations have cleared away the mists that have for months hung over the building situation. The rather vague references to building of a nonessential character, or not directly related to winning the war, have been superseded by clear-cut utterances incapable of misunderstanding so that the lumber industry and all other interests affected now know exactly where they stand. It now is perfectly plain that the Government wishes absolutely no building undertaken unless it falls into one of the five preferred classes named in circular No. 21 issued by the War Industries Board under date of Sept. 3.

The classes of building enterprises for which no permits are necessary, as outlined in that order, may be briefly stated as follows: work undertaken by or for some branch, department or bureau of the Government; repairs or extensions to existing buildings where cost does not exceed \$2,500 (later amended to include new farm buildings up to \$1,000); work directly connected with mines producing coal, metals, and ferro-alloy materials, and public highway and street improvements approved by the United States Highway Council.

Through the efforts of the Retail Lumbermen's War Service Committee, consisting of J. R. Moorehead, Kansas City, Mo.; C. C. Harper, Rochester, N.Y., and A. C. Johnson, Dubuque, Iowa, a modification of rule 2 of circular No. 21 has been secured, permitting new construction, for farm purposes only, not exceeding \$1,000. The rule as amended reads as follows:

Repairs of or extensions to existing buildings involving in the aggregate a cost not exceeding \$2,500; and new construction for farm purposes only involving in the aggregate a cost not exceeding \$1,000.

Big Suit Over Sale of Timber

A commission of \$50,000 on an alleged sale of timber on Vancouver Island is the subject of a suit in supreme court.

Plaintiffs are Roray & Yeaman, timber brokers of Vancouver, the Nimpkish Lake Logging Company and M. N. Garland.

Plaintiffs allege that late in the year 1914 they were given a listing of certain limits on Nimpkish Lake, Vancouver Island. This was done, it is claimed, in response to a request from Roray. A price of \$685,000 was placed on the timber, the commission was fixed at \$35,000, a letter confirming this arrangement being given to the selling agents.

The timber comprised in the limits, as set out in a cruise made by John W. Rankine, is said to be among the most valuable in the province, comprising over 750,000,000 feet of timber, over half of it being fir of the finest quality. The plaintiffs allege that following the arrangement with the defendants they did a great deal of work and finally effected a sale. They allege further that later on the original contract was varied, and that the commission to be paid them was fixed at \$50,000.

The defendants hold that no sale was actually effected by the plaintiff company.

The British Paper Markets are Your Opportunity

Establish a market for your paper stock now and it will be a great asset to you in after war trade with Great Britain. We can make very advantageous contracts for Canadian paper of all kinds and especially newspaper stock. This is a big opportunity for Canadian mill men. We are the largest paper makers' agents in Great Britain and will be glad to hear from manufacturers interested in export trade.

Write us to-day.

WOOD BROKERS

FOR EVERY CLASS OF TIMBER

Head Office: HULL, England

To the Lumber Companies of Canada:

You have the Goods. Place your Lists with all particulars in our hands. We are in daily touch with all the Buyers in the United Kingdom.

PLEASE NOTE.—We pay cash against all documents, and take the whole of the Delcredere risk on Buyers.

CANADIAN WOOD PULP

**We are the
LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

Send to us for information

PUT YOUR REFUSE BURNER ON A "DIET"

By saving the slabs that come from your mill and running them through a Yates H-6. There is good material in slabs and the proceeds from the merchantable lumber they yield might just as well be in your pocket as at the bottom of the refuse burner in ashes. If you wish to know about this machine we will gladly send any literature we have relative to it, free of charge without any obligation on your part.

A post card does the trick. WRITE RIGHT AWAY.

GENERAL PURPOSE DOUBLE SURFACER NO. 177

The Solution for Your Surfacing Problems

If your stock needs smoother surfaces—needs the extra touch that raises the grade and increases the profit—the Yates No. 177 is the solution. If your production needs whipping up—needs an extra and continuous push to increase the size of your lumber pile and your bank account—the Yates No. 177 is the solution.

The Yates No. 177 Double Surfacers is compact and durable. It is built 30 in. wide and will open 7 in. It will handle anything from veneer to timbers, and stand up day in and day out. Has extra-efficient heads, which may be ground and jointed in machine. Bed is raised and lowered by power. All controls convenient to operator. Feed rates up to 100 feet per minute.

A postal will bring you our new circular on this machine. It describes and illustrates the "177" in detail. Send for it to-day.

The Trouble Coming This Winter

Men will be even more scarce than last season.
Wages will be still higher than last year.
You will get even less value for money spent in wages.
Contracts will be more difficult than ever to fill.
Profits will be seriously reduced owing to higher operating expenses.
You know of the above troubles from unpleasant experiences of previous war-time seasons.

**Look Ahead. Foresee the Trouble.
Delays are Dangerous.**

Marsh Engineering Works, Limited

The Remedy To Apply Now

Machinery can be used largely to take the place of men.
SKIDDING MACHINERY will bring logs from the stump to the car or water much quicker than men and horses, and at a lower cost.
LOADING MACHINERY will put the logs on the cars easier and quicker than man power.
SMALL CARS can be made to convey logs to the rail or water at a considerable saving.
Let us demonstrate to you the truth of the above claims and relieve you of much of your trouble.

Apply the Remedy by arranging for your Machinery Now.

Established 1846 Belleville, Ontario

GOODHUE BELTING

FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts," then you will buy a "Goodhue." According to the conditions under which the belt has to run, we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality, but each made for a different service

347 Adelaide St. West, Toronto

—an important factor

—to the millowner who wishes to increase dividends and reduce overhead charges to a minimum is the successful manufacture of by-products from what would otherwise be waste. The "waste" of a lumber mill can be made the basis of a most profitable industry in the production of chemicals, wood-pulp, etc.—products which are in great demand and at big prices. We have specialized in the installation of chemical plants in all parts of the world for over 75 years, and our knowledge and experience is yours on request.

"Brazel Patent" SNOW PLOWS

Known in every
Camp from the
Atlantic to the
Pacific as the
most satisfac-
tory Snow Plow
made.

**Combination
Model, Lumber-
man's Snow
Plow, can be
used either with
or without Rut
Cutter.**

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll up and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of

Chapman Double Ball Bearings

— IN —

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

You pay for Chapman bearings whether you buy them or not

Little Giant

For Bigger Business

A Minimum of Fuel—A Maximum of Power

Compact yet capacious, rigidly strong, mechanically efficient, and conveniently handled, the Little Giant is the motor truck for your deliveries, the guarantee of better service to your customers, and the means of bigger business for you.

USE KEROSENE

THE DUNTLEY Hydro-Pneumatic Gas Generator is an exclusive feature of Little Giant Motor Trucks. With this device the Little Giant Truck may be operated on kerosene or gasoline, at a saving in fuel cost of over 50 per cent., with a total absence of carbon, smoke or odor.

Let us demonstrate its value to you.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, breakdowns or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

"HAMILTON" CIRCULAR RE-SAWS

Here is a strong, rigid well designed machine, specially gotten up for resawing slabs. The feed rolls are carried on a sliding frame that is easily adjustable to cut lumber any desired thickness. The binding or press roll is 13 in. diam., fitted with saw discs and power driven. The saw used is 42 in. diam., driving pulley 18 in. diam. x 12 in. face. Cut shows Left Hand Machine.

We also make this machine with wooden frame, having the mandrel and saw carried on an adjustable sliding frame.

Descriptive circular sent upon request.

"HAMILTON" HUSK FRAMES

Made in different sizes to suit all requirements. Frames are all of cast iron, of heavy section throughout, planed on top and bottom, with mandrel boxes lined with high grade babbitt. Mandrels are exceptionally large, of forged steel with forged collar, and the guide is the famous Parkhurst steel saw guide with steel splitter.

We manufacture a complete line of up-to-date Sawmill Machinery for either Band or Circular Mills.

HARRIS HEAVY PRESSURE

THE ARISTOCRAT OF BABBITT METALS**SHIVES LUMBER CO., LTD., Campbellton, N.B.,
Canada**Messrs. The Canada Metal Co., Ltd.,
Toronto.

Dear Sirs:

Replying to your inquiry regarding our experience with Harris Heavy Pressure Metal, would say we have been using this metal for about five years in main bearings and cranks of Wickes' gangs and steam engines, also edgers, etc., in place of more expensive metals that we formerly used for these bearings.

We are pleased to be able to say that the Harris Heavy Pressure has in every case given us good satisfaction, being a nice metal to pour without shrinking or cracking, and wearing well. So long as this metal retains its present standard of excellence we will have no hesitation in using it for the most severe conditions we have for babbitt metal.

Yours

JOHN M. MACLEAN,
Superintendent.**WRITE FOR COMPLETE LIST OF BABBITT METALS****THE CANADA METAL COMPANY, Limited****Head Office and Factory TORONTO Fraser Avenue****Branch Factories—****HAMILTON****MONTREAL****WINNIPEG****VANCOUVER**

LUMBER CONVEYING LINK-BELT

Breakage of links in this service often means delays and temporary shut-downs while repairs are being made. Realizing the seriousness of such delays, we employ only the highest grade of refined malleable iron in Link-Belt subjecting it to careful analysis both before and after casting. This mark  on every link is your guarantee of reliability. Book No. 260 on request.

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

Lath Machine and Bolter

This machine is a combination of our No. 2 Bolter and No. 2 Lath Machine mounted in a single frame. The lath machine is made the opposite hand to our single machine. The illustration shows the lath machine side of the combination. In mills where the floor space is limited and the output must be large this machine is an ideal combination. The details of construction found in our No. 2 Lath Mill and No. 2 Bolter apply to the combined machine.

When you overhaul your mill get in touch with us about new equipment.

**We have the following on hand
ready for shipment**

one Portable Saw Mill outfit with Right hand Saw Frame and Carriage—set of track timbers, also the following items:

No. 1 Log Jack with foot wheel and idlers.

No. 7 Log Jack with foot wheel and idlers.

10 inch by 42 ft. Steam Feed—furnished with vertical or horizontal valves.

Double acting set works in No. 1, 2 and 3 sizes.

We have one second hand plain slide valve engine, right hand, side crank, 9 x 15, suitable for a small sawmill plant.

**Write at once for information regarding the above
or any other machinery you may need.**

Get Action— In Your Log Deck

The modern tendency in Sawmilling is to make every second count. We have speeded up the Waterous Log Deck to keep pace with this idea.

To do it we have re-designed and re-built practically every Machine in our Log Deck. More particularly, we have discarded the old cylinder with its leaky outside steam pipes, and have replaced it by a cylinder and lever connections that answer the sawyer's movements instantaneously.

The 1918 Waterous Loaders, Kickers, Niggers, etc., not only work with a "punch" behind them, but there is a snap and action in the work that makes the seconds count. It doesn't take two or three strokes of the Nigger to get the log in position for the cut. The log is placed on the Carriage without hesitation—and placed there right.

The new cylinder is shown in the attached cut. Steam ports are cast solid; valve gearing and valves are of strong design; a check valve regulates the exhaust to steam cushion the piston at both ends of the stroke. The valve operates by one lever, quickly, easily and on a short travel. Exhaust throttling plugs increase or diminish operating speed of the cylinder without affecting the power of the machine—this is a special feature. All wear on the rod, gland and packing is overcome by the guide bar support for the piston rod.

This cylinder is easily mill-wrighted, accessible, strong and convenient, and built in diameters of 8 in., 10 in., and 12 in., is supplied on every machine of the WATEROUS LOG DECK.

Go over your Log Deck when the mill is running—do you make the seconds count?

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 90c per lb.; West of Fort William, \$1.00, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

Lest We - Who Live - Forget

BUY VICTORY BONDS

YOU MAKE NO SACRIFICE.
IT IS A PRIVILEGE AND
A HIGH CLASS INVESTMENT.

THE BOYS IN FRANCE
ARE SUPPLYING THE
FIGHTING.

IT'S UP TO US TO SUPPLY
THE MONEY.

BUY VICTORY BONDS

WE SHALL NOT SLEEP

In Flanders fields
The poppies blow,
Between the crosses,
Row on row,
That mark our place,
And in the sky
The larks still bravely
Singing fly,
Scarce heard amidst
The guns below.

We are the dead,
Short days ago we lived,
Felt dawn,
Saw sunset glow,
Loved and were loved,
And now we lie
In Flanders fields.

Take up our quarrel
With the foe.
To you from falling hands
We throw the torch,
Be yours to hold it high.
If ye break faith
With us who die
We shall not sleep,
Though poppies grow
In Flanders fields.

Col. McCrae.

IT'S human nature to want to do the job well.

A man with a good sharp file will do twice as much work as a man with a dull file, and he'll be less tired and less "grouchy" at the end of the day.

Consequently, good tools encourage good results.

The best files to work with are the "*Famous Five*." They are hard and keep their cutting edge, because they are accurately cut and properly hardened.

Specify them when ordering.

Experts predict that whether or not the war comes to an end this Fall transportation facilities will be taxed to the limit. Vast quantities of supplies of all kinds must move for domestic use and for the use of our troops abroad. There is every likelihood that lumber will have to take a back seat unless especially required in the present emergency.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

Blakeslee, Perrin & Darling

BUFFALO, N. Y.

An economy too large to postpone

OBERVE the big part of every cord of wood wasted where wood is barked the old way. All your wood goes into pulp when you use the barking drum pictured above.

Write today for the figures

If your mill barks wood the old-fashioned way, let our engineer tell you the actual saving our method will accomplish in your mill. It will in no way obligate you to get the facts.

TWO of these men and our barking drum will release all the rest for other work. The annual saving reaches an astonishing figure. Labor is scarce. Investigate this short-cut.

American Barking Drum Company, 440 South Dearborn St. Chicago

For the Credit of Canada !

BUSINESS is good in Canada. More men and women are now employed than at any other period in our country's history.

Many millions of dollars are being expended annually in Canada.

A large proportion of this money is paid out in wages—large sums go to our farmers.

Our well-paid workers and our prosperous farmers turn over much of their large incomes to the merchants from whom they obtain their household and personal requirements.

“ “ “

But there is another side to the picture.

For four long years we have been defended by an army so brave and so well-equipped that it is called, with reason, “The most formidable weapon of its size on any fighting front.”

To maintain that army costs money—and the money must

continue to come from the Canadian people.

Not as a gift—but as a loan.

“ “ “

The merchants of Canada must subscribe their share of that loan—must provide their fair proportion of the money that is to maintain our fighting strength, our industrial activity, and our farm prosperity.

You know that Canada cannot continue her splendid effort without money, the super-weapon in this war.

You know that Canada's Victory Loan 1918 provides an opportunity of lending your money to help win the war—and it will come back to you plus a high rate of interest.

**Be ready then—to buy Victory Bonds.
Buy all you possibly can.**

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38

Toronto, November 1, 1918

No. 21

Canada's Opportunity in the Export Market for Timber

There is presented in this issue of the "Canada Lumberman" several articles from leading authorities on the great opening which awaits the Dominion to capture the export timber trade which will be developed with Europe after the war. Consideration of this important and timely subject is offered from various angles and the way is clearly pointed out.

The avenue for export of Canadian spruce and red and white pine which will be employed in the building line in the Old Land, where, in the way of dwellings, the country is half a million houses behind, occasioned by the suspension of structural operations due to the war, is not the only one that presents itself. For pit props, railway sleepers, heavy timbers and deals there is also an excellent opening, and now is the time to prepare for the great ante-bellum development in the products of the forest. There is an old aphorism "in time of peace prepare for war" which might be given a broader interpretation, "in the days of war get ready for an expansion of trade." Be alert for the demand which is bound to come and gauge conditions as correctly and comprehensively as possible.

It has been said more than once that business and commerce are cold, hard and unsympathetic propositions and that sentiment plays but little part in the affairs of trade and markets. This may in a sense have been true previous to the outbreak of the European strife, but a radical change of view and feeling has been brought about, particularly in the English-speaking world. The Mother Country is not unmindful or ungrateful for the splendid part which Canada and the other British dominions have played in the strenuous struggle overseas for liberty, democracy and autonomy, and there is a strong disposition—call it sentiment if you will—in favor of those countries which have joined so enthusiastically and whole-heartedly in the great organized fight that the freer nations of the earth have put up to usher in a better and brighter federation of mankind. The tend-

ency at this present moment is for Great Britain to extend the largest measure of encouragement and support to those of her dominions who have stood so gallantly by her in the present crisis. Already inquiries have been received by Canadian firms from those abroad and opportunity appears to be knocking at the door. Canadian lumbermen, who have been doing such admirable work in the forestry corps in Scotland, England and France, see no barrier in the pathway of the Dominion greatly extending her timber export trade, and, being on the spot, they have first hand knowledge of what they are discussing.

It may be said that the one great difficulty in the road will be lack of ocean transportation. With the active shipbuilding campaign being carried on, not only in Canada, but also in the United States and Great Britain, this is not regarded as an insuperable obstacle. Foreign conditions should be thoroughly investigated, and as France, Belgium and England will require a vast amount of building and manufacturing material, accredited representatives should be sent overseas to study carefully the entire situation and special needs. British Columbia has already a well qualified lumber commissioner on the spot, and various associations across the border are now becoming increasingly active.

The campaign should begin at once and effective action taken. There is much speculation with respect to what lumber prices will be after the war, the end of which is in sight. No one has sufficient inside or prophetic knowledge to forecast accurately what will happen or the quotations that will prevail, but one authority points out that the situation in regard to values will depend on a number of things. There is first, the wage and labor question. If wages and the cost of supplies remain as high as they are now lumber prices cannot decrease, and, on the other hand, if the domestic and foreign demand is strong enough figures for the products of the forest will remain where they stand to-day or even ascend. In that event it is predicted wages will also stay at a high level. In many industries, however, the scale of pay will drop, while requisitions for lumber may possibly not be as numerous or as insistent as expected. In the meantime it is declared that nothing can be gained at the present juncture by sacrificing stocks at below-cost quotations when the demand cannot be stimulated. The watchword for the Canadian trade at this moment should be to have its house in order and be prepared for the resumption of activity, both at home and abroad, that will consume large quantities of building materials, so far as human ken can survey.

The Impetus of Safety Work in all Industrial Activities

If a man fails in business, loses his position, misses his train or does not take advantage of a favorable opportunity that presents itself, whom does he blame? Why, the other fellow, of course! If not him, then circumstances come in as a contributing factor. We seldom look at things fairly and squarely and admit that fault is with us. Again, when the other fellow does things in a quiet way and we see a rare chance to appropriate the credit, or reap the reward, most of us are not at all backward in claiming the recompense or accepting praise. Whether it is laudation or censure, victory or defeat, the other fellow is the man who has to stand the burden or the brunt.

But there are many lessons that all may learn with an open mind from the other fellow, providing we approach the task in the right spirit. Some years ago a very successful theatrical production that taught useful and practical truths along this line, was presented all over America. It was known as "A Message from Mars." The self-satisfied, consequential hero had no sympathy with the afflicted and the down-trodden, no compassion for the rights of others, or encouragement for the fight which the poor, the helpless, the neglected and the forlorn were waging. But a sudden change in circumstances revealed the self-centred individual in all his nakedness, niggardliness and selfishness. When viewing matters and hard, cold conditions from the underside instead of the upper, "A Message from Mars" grew generous and sympathetic, kindly and public spirited. He had gained what was most important, a new viewpoint, a larger vision and an intimate touch with things as they are, knowing there are many

wrongs to remedy, gross injustices to uproot and numerous evils to correct.

All of which leads up to the great congress of the National Safety Council, held in St. Louis recently. More manufacturers are taking part in this important work today than ever, not simply from the dollars and cents standpoint, but also from the humanitarian side. The indifferent, the neglectful, the take-a-chance element is not all on the one side. The other fellow cannot be blamed for every mishap, disaster and loss. Two thousand safety engineers and plant executives attended the gathering, and the slogan was, "Help win the war by stopping accidents."

"Safety Sunday" was observed in the churches, and ministers and priests delivered discourses on the value of safety work, emphasizing the moral obligation of every person to protect his own life and the lives of others. Window cards were exhibited, workmen's mass meetings were held, talks were given in the schools and clubs, and mothers' meetings were conducted during the great "Safety Week." Every pay envelope bore a message regarding safety, and newspapers co-operated most generously in arousing the community interest in the movement. The goal was no accidents during "Safety Week." and every citizen was asked to do his part. The activity of every man, woman and child in the city was stimulated and the cumulative result was gratifying. The results gave a tremendous impetus to the object in hand and marked the beginning of a continuous campaign in both industrial and public safety. The whole was a convincing demonstration of what can be done when every one does his part, and reminded visitors of the now widely-known slogan that "under the safety flag all men are allies."

Meeting New Problems as They Arise on Every Side

The relations of the lumber industry are intimately associated. This fact has been strongly brought out in connection with events engendered by the war. The part which the wholesaler plays in the scheme of affairs was never more widely recognized than at the present time, and, if it were not for the service which he has and is rendering, much of the material that is required for war purposes would not be as readily available; nor would the problem of supply and distribution be so efficiently solved.

Another important factor in the lumber arena is the retail dealer. He is the last link in the chain of marketing the products of the forest, and comes more directly and effectively in contact with the man who uses the timber than is possible in other spheres of trade activity. While the lumber manufacturer has many problems to solve and is beset on all sides with embargoes, permits, licenses, shortage of labor, high cost of production, transportation troubles, etc., the retailer has also his share of the burden to bear. He is the man who puts the lumber into the hands of those who consume it, and while local problems may differ, there is a community of interest and strength of purpose which runs through the whole gamut of the trade.

Recently a very successful meeting of the National Retail Lumber Dealers' Association was held in Chicago, and although that body has only been two years in existence, it has made substantial progress. The organization has not been fostered without criticism, and naturally some defects are evident, but this does not prevent the ideal being striven for. It is only by agitation and co-operation that the highest achievements are carried out, and what has been accomplished by the National Wholesale Lumber bodies of the United States can no doubt be supplemented and safeguarded by the work of retailers as well. Through the medium of a national association many difficulties can be combatted and the betterment of general conditions brought about. The Western Lumbermen's Association, which includes practically all the retail dealers from Winnipeg to the Coast affords, for instance, a splendid example of unity, method and mutual helpfulness.

While it may not be possible to have a Canadian National Retail Lumber Dealers' Association, it should be feasible for an organization to be formed in the East somewhat similar to that which pre-

vails west of the Great Lakes. Ontario has an active and alert body of lumber merchants which are making their power and influence felt, although this guild is not yet a year old. The membership has grown by leaps and bounds. Can there not, within the near future, be effected in the East an organization something after the character of the Western Lumbermen's Association? Distances in Canada are too great and the population too widely scattered to entertain any immediate hope of a strong national body, but there is no insuperable barrier to the retailers in the provinces of Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island linking up in a representative assembly for the consideration of various questions in the lumber business as they relate to the East.

The war has driven home many lessons, but none more pointedly and impressively than that new conditions in the trade must be met as old customs are being cast aside. Broader viewpoints are presenting themselves, and with the changes that have come in the wake of world-wide commercial upheaval, all yardmen must be wide-awake in espousing new ideals. Unity of action and a disposition to meet promptly and co-operatively the problems that constantly arise for satisfactory adjustment are evidenced on every hand.

Safeguarding Industries and Municipalities from Fire Losses

"Fire Prevention Day," which was observed on October 9th, was a happy innovation on the part of Ontario citizens. Numerous towns and cities joined heartily in the movement which resulted in a general clean-up and the removal of fire hazard at many points. The importance of this great work is emphasized when it is known that the fire waste in August last was fifty per cent. greater than during the corresponding month in 1917. By co-operation, education and aggressiveness the loss occasioned by fires may be considerably minimized. Safety work has decreased very materially the number of accidents in all our industrial plants and there is not an industry today but recognizes the place that it holds in the efficiency, welfare and contentment of its employees.

In a similar sense the safety propaganda in the matter of preventing fires, a great many of which are due to carelessness, ignorance or sheer neglect, should gather strength with each successive effort being made by the provincial and civic authorities to reduce this largely avoidable calamity which visits every centre, often when least expected. It is declared that eternal vigilance is the price of safety, and the same remark might be applied to fires; in that incessant watchfulness will prevent damage or destruction to many homes, plants and institutions.

A syllabus for use in the schools and instruction in fire prevention has recently been issued by the newly organized Ontario Fire Prevention League. One clause dealing with the work of the teacher says that the causes of fires may be interestingly taught by suggesting to the pupil that fire reports be clipped regularly from the daily home paper, and that he classify the same as to avoidable and unavoidable fires.

There has also been sent out from the office of the Fire Marshall copies of suggested by-laws for the prevention of fires. Section five, dealing with wood and lumber yards, says: "All persons who desire to store lumber, timber, firewood, clapboards, laths or shingles in the town, or to work, run or use any saw or planing mill, carpenter's or joiner's shop, or other building or establishment wherein wood or other combustible materials are kept, shall first obtain the sanction of the Council so to do, as well as the sanction as to the place where such wood-yards, mills, shops or other buildings may be located and used.

"No person or persons shall hereafter erect, use or operate any steam engine, steam boiler, soap or candle factory, gas or varnish factory, or any factory for the manufacture of fireworks, friction matches, oil refinery or chemical works, or other establishment which from the nature of the materials used may be dangerous in causing or promoting fires, without having first applied for and obtained permission from the Council so to do."

Demands For Forest Products After the War

Canada Possesses Splendid Facilities for Meeting the Requirements of European Countries if Ample Preparation is Made for Such Service

By E. Stewart, Toronto

E. Stewart, Toronto

Anyone who has given any attention to the enormous loss of property of various kinds caused by the war, cannot have failed to reflect on the almost irreparable destruction throughout a large part of Europe of its woods and forests, and the far-reaching effects produced. The destruction of this year's agricultural crop may be followed by one of equal value the following year. The houses, the highways, the bridges etc. destroyed to-day may be rebuilt to-morrow, whereas a century will have to elapse before a mature forest crop can be reproduced. Every day we see illustrations in our papers of those dismantled forests, which remind us of many in our country where fire has done its deadly work. Probably France has been the greatest sufferer in this respect,

but wherever fighting has taken place the soldier has used the forest as a place of rendezvous and protection and in so using it has destroyed it.

We have not heard so much of this from Italy, but a recent United States Consular report has the following to say regarding the same destruction there and the necessity there will be for greatly increased imports of lumber after the war. He says: "The yearly cut from Italian forests, other than fuel wood, before the war amounted to not more than 600 million board feet a year. That up to date the lack of imported lumber and the demands of the war have made such inroads on the supply that if the war ends within a year or two, Italy must import at least two billion board feet per year for 15 years and that in case lumber prices abroad are approximately the same in gold as they were before the war, it will import from three to four billion board feet for about three years and two billion feet for the following twelve years."

He says further that "many Italian lumber concerns had mills in that part of Austria bordering upon the Italian Veneto. These concerns will not go back into Austria if lumber can be imported from elsewhere and prices are within reason".

Importations to Repair Wastage.

No doubt the other belligerent countries bordering on the Mediterranean are in the same condition and will have to import vast quantities to repair the waste caused by this long protracted struggle.

The New York Sun, in a recent article, deals with the forest condition in England. It says: "Although the Germans have not set foot in England, and the horrors of invasion have been spared the country, nevertheless its natural aspect is undergoing a great change, due to the war. The beautiful woodlands, forests, woods and groves that for centuries have made its landscape of unrivalled beauty, are fast disappearing under the axes of the Government's lumbermen. It is only a question of time, according to the report of the forestry sub-committee, before the whole of the country's growing timber which is fit for commercial use must disappear. Even if every acre felled is replanted, it will be many years before the present output can be repeated."

"It is estimated that by the summer of this year the Government and the lumber trade will probably be converting trees into timber at the rate of 6,000,000 tons per annum or more than half of the total imports of timber on the last year before the war. Indeed the need of timber is so great and imperative that it is feared by the end of next year the Government will have to cut all the remaining substantial blocks of mature coniferous timber in the country. And by substantial blocks is meant any patches of any size whatever suitable for cutting. It is only too probable that this destruction of the beautiful woods of England will have to go on to the bitter end,

as the demand for timber is a continuous and compulsory one so long as the war lasts."

The August number of the Canadian Forestry Journal publishes a most illuminating article entitled "An Empire Partnership in Forestry" from the pen of M. C. Duschene, a well-known British Forester. He says: "Let us consider the position of Canada, and with Canada I include Newfoundland."

"Canada contains the only vast resources of timber within the Empire. Figures show that Canada, in 1913, sent us only 10 per cent. of our import of coniferous timber and pitwood. That country has the the largest reserves of probably the finest timber in the world and of the varieties most suitable for our requirements. Is there any reason apart from the matter of transport, why in the future the 10 per cent. should not be increased enormously? In the past the cost of transport from the Baltic was low in comparison with that from Canada, partly on account of return freights and other special facilities. Given cheap freights and special exchange of trade with Canada after the war, this comparison might not stand in future."

Canada's Splendid Advantages.

"Let me enumerate some of the advantages of organizing British and Canadian forestry on broad lines, looking to Canada for mature timber, while creating reserves by afforestation in Great Britain. I would first emphasize particularly: The geographical position of Canada and its distance from the war area. That lumbering is one of the principal industries of Canada and can be extended promptly and indefinitely. That Canada possesses exceptional natural facilities relating to water transport and other advantages.

Now, as to mutual advantages:

Firstly, Canada has unlimited supplies of Douglas Fir, the "Oregon Pine" of commerce, pre-eminently suitable for constructional work and many other important purposes, as has been abundantly proved in its world-wide markets.

Secondly, Canada possesses also unlimited resources of other species of timber, particularly varieties of spruce, the "White Deal" of commerce. The timber of spruce is used in great quantities in this country and selected parcels of Canada's Sitka Spruce are in large demand for the construction of aeroplanes. Canada has also the *Thuya plicata* (known in British Columbia as "Western Red Cedar") one of the most durable trees in the world, as well as Weymouth Pine (the "White Pine") of commerce, and other important trees, including various hardwoods.

£5,000,000 for Pulp.

Thirdly, our annual bill for wood pulp for paper-making totals five million pounds. This material can be supplied in conjunction with pitwood from the forests of Canada, and the manufacture of pulp is one of the most flourishing industries of Canada."

Mr. Duschene challenges us to action when he points out our advantages for taking a foremost place in supplying Europe with wood material to restore in part the destruction over a vast area of that continent. The work of rebuilding the dwellings of the people will receive first attention and as wooden houses can be quickly erected it is safe to say that if material can be supplied without delay, wood will be largely used.

Nearly every country of Europe had for long years been able to supply a considerable proportion of its consumption from its own forests, but as shown above in the case of England and Italy, they will be compelled for years to vastly increase their wood imports.

It is not alone for the reconstruction of destroyed buildings that an altogether unprecedented demand will be made for we must remember that, for the past four years, the normal building of all structural works except for war purposes has been almost entirely suspended in all parts of the world. Once peace is restored necessary works both for delayed construction of new buildings as well as for the necessary repairs of old ones will be proceeded with as soon as material can be obtained.

There is another point deserving of attention. This demand, once the war is over, will be urgent and insistent, and the timber-producing country that makes preparation in advance so as to be ready once the demand is made and transport secured, will find itself well rewarded for its timely action, and will by so doing be able to establish a lasting and profitable trade.

Here is Canada's opportunity. One of the first things that the

Canadian Lumbermen's Association should take up is to induce the Minister of Trade and Commerce to appoint representative lumbermen as special timber agents to the leading European countries. These agents should be in close communication with a committee of the Canadian Lumbermen's Association. The prime duty of the foreign agents should be through every available means to acquaint the timber dealers of those countries with the articles in that line which Canada can furnish. They should be able to furnish information of the varieties of timber that we can supply, of their qualities, such as durability, textile strength, etc., and of approximate prices at place of delivery.

It may be said that our trade commissioners are now doing such work. I have had the privilege every week of receiving and reading their reports through the Weekly Bulletin, issued by the Department of Trade and Commerce, and know their value, but it is impossible for these officials, whose duties are to report on all branches of trade, to do the special work that now demands attention in this regard.

Other countries, especially our neighbors across the line, who will be our competitors, notably in the timber trade, have been for some time preparing to take advantage of the great new era in world trade that will soon arrive. Let us also be prepared for it especially in a line in which Canada should take a first place.

Canada Can Secure European Business

France and Belgium Must Rely On Dominion for Pit Props, Railway Sleepers and Deals.

Writing from London, England, T. H. Blacklock, of Montreal, declares that there is a splendid opportunity for the Dominion to develop a vast lumber trade with Great Britain and the devastated countries of Europe at the close of the war. The big demand will be for pit props, railway sleepers, heavy timber and deals. He asserts that members of the Canadian Forestry Corps who are now on the scene and have been for the past few years, are of the opinion that splendid possibilities lie before the Dominion, if this country is only alert and aggressive, to do a record business.

Mr. Blacklock points out that owing to the inadequate ocean transportation facilities, the war has made great demands on the home timber supplies of France and Britain and there is little doubt, judging from re-occupied territory, the Germans have practically denuded the forests of Belgium. Previous to the outbreak of war it was estimated that France had eight times the timber resources of Britain, but when the test came it was found that Britain's timber resources had been under-estimated by fifty per cent., as there has been already cut in this country more than the early estimated total supply, and considerable areas of good timber are still available.

British and Canadian timber experts believe that for several years after war, Britain, France and Belgium will have to import practically their whole requirements of pit props, railway sleepers and heavy timber and deals. The home supplies will be almost exhausted and these countries must look to Northern Europe—Norway, Sweden, Finland, and Russia—or to Canada, for ordinary requirements and for reconstruction work in devastated areas. Many Canadian timber experts, now in the forestry corps and combatant ranks, believe that Canada can capture the bulk of this trade if proper and energetic effort is made. They count Russia and Finland out of the market owing to present and in a great measure continued business and political disorganization. The supplies from Norway and Sweden are limited and also much of the timber business of these countries was due to Russian imports partially manufactured and exported to Britain. They also point out that for two or three years after the war Britain's timber imports will be controlled by the government, as will in a measure ocean transportation facilities for this purpose.

Pit props are selling here at present at twelve cents per foot for props three inches in diameter up to five inches at the top. This is about seven times the price in pre-war times, and although it will decrease as conditions make for normal, yet for years it will be remunerative. The demand in Britain for pit props is enormous. For sixteen mines near Doncaster the yearly requirements are about 32,000,000 and this area is only one of many throughout South Scotland and the Midlands. Railway sleepers will be required by the million and heavy timber to the extent of the entire requirements. Canadian hardwood, with the exception of birch, will find but a limited market, as Britain's local supply has not been seriously impaired and her imports will be drawn from the East and Central and South America. Many are looking to Quebec and New Brunswick as the field to meet the British, French and Belgian demands for pit props, sleepers and heavy timber, and believe that Canada's sailing ships now under construction will solve the transportation problem. They claim that we must produce to meet European requirements, not according to our own ideas, and failure to do this in the past has been our greatest handicap in develop-

ing trade. South Africa is another market for Canadian timber. There can be no question of the enormous requirements for Britain, France and Belgium after the war; the only question is whether this trade can be captured for Canada. Canadians here believe it can and are preparing to make the attempt.

Mr. Kirkwood Has Big Shipping Project

Mr. T. M. Kirkwood of Toronto and Three Rivers was in Quebec recently in connection with his project to build thirty large wooden steamships in Quebec, and to run them as a daily freight line, from Quebec, during seven months of the year, and from Halifax and St. John during the other five months, to carry the grain to be brought over the Transcontinental Railway.

Mr. Kirkwood said that his idea is to utilize the shipyards which are now building wooden steamers in Quebec, and to establish additional yards so as to get the thirty boats necessary for a daily line built, with the least possible delay, so as to provide tonnage to fill up a portion of the scarcity of shipping which will be felt immediately after the war, owing to the fact that six million tons of British shipping have been destroyed by German submarines, and because existing ships will be required for a couple of years to bring returned soldiers home. He declared that all the steel tonnage that can be built in Canada for several years to come will be only a drop in the bucket compared with the six million tons we have lost because of the small quantity of steel plates which the mill now being built at Sydney, the only one of its kind, will be able to turn out.

Mr. Kirkwood has already built two such vessels at Three Rivers, using British Columbia timber for the larger members and local lumber for all the rest. He says the French-Canadian ship carpenter is the best workman in the world for this work, and that it should become a permanent industry.

Mr. Kirkwood's idea is to interest the Dominion Government and the Government of the Provinces concerned, namely, the three wheat growing provinces of the West, who are interested in saving three cents per bushel freight on their wheat, and the Provinces of Quebec, Nova Scotia and New Brunswick, which are interested in having the shipbuilding and in having the trade of the Northwest brought to their seaports.

An Interesting Action of Note

In the case of Emery Ranger vs. Mathias Garipey, in the Court of Review, Montreal, the question turned on the validity of the consideration received for the promissory note at issue. Garipey sold to Ranger a saw mill. After being in possession for a time the latter menaced Garipey with an action to quash the deed of sale because the building did not conform with the civic building by-laws. In compensation for the defects Garipey gave plaintiff a promissory note for \$500, which was paid in part, the balance being covered by a renewed note. It was for the balance that plaintiff sued. Defendant pleaded default of consideration, the note having been given without cause, he said. The defects of construction in the mill were apparent at the time of the purchase and therefore plaintiff could have no claim in that regard. Further, he pleaded that the note was consented to under false representations and menace. "Legal consideration or reason was necessary to every contract," Mr. Justice Lamothe pointed out in rendering the judgment of the Court of Review. This included a contract of compromise, the judge added. In this case plaintiff might reasonably believe he had a good right of action to annul the sale of the saw mill because of the building defects, notwithstanding the fact that he knew of them when he made the purchase. His pretensions had a certain "color of right" and were at least open to discussion. A great majority of French authors admitted that a discussable claim constituted a sufficient basis for a compromise. In this province Mr. Justice Jette made a pronouncement in this sense in the case of St. Marie vs. Smith (Volume 2 of the Official Reports of the Superior Court, page 292.) In the present case the Court found there was sufficient ground for a compromise, and that there had not been false representations.

It had been objected that there could not be a question of compromise in view of the fact that all the concessions had been on one side. The Quebec Code, however, had not adopted the text of the Code Napoleon, but said at Article 1918 that concessions on one side sufficed. Moreover, it was not exact to say that in this case the concession had been all on one side. Ranger believed he had a right to annul the sale or to an indemnity of \$2,000. He abandoned his intention to demand the quashing of the sale and reduced his pretensions to indemnification to \$500, the amount for which the original note had been given. Garipey, who could have contested the claim, recognized it to the extent of \$500. Furthermore, he had renewed the note on several occasions. If really he had not at the outset given free consent to the note he would not have made any payment on account. Each of these payments was a recognition of the debt.

Making the Retail Yard Safe Pays Every Time

The Lumber Yard Requiring Skilled and Educated Workmen Has to be Leader in Considering Safety Devices and Physical Comfort

By Julius Seidel, Seidel Lumber Co., St. Louis*

Julius Seidel, St. Louis, Mo.
A live wire in the retail trade.

In presenting a survey of improvements, already introduced in some yards, and touching upon future possibilities for safety in operations of lumber yards, I am, indeed, discussing a subject which has always been very close to my heart. This feeling was perhaps accentuated by the fact that my training in lumber began with the actual handling, stocking and grading; in short, I served my term as a private and had to win my advancements. This training afforded me the means of studying conditions, environments and, above all, working men. While there has been much advancement made in the betterment of conditions for the office man, you will understand that the topic assigned to me was that of practical operations; namely, the handling of the material itself.

The working of yarding comprises, on inbound cars, the unloading, inspecting and stacking, and on outbound work the loading of wagons, trucks and railroad cars. In the main, it is what might ordinarily be termed "Laboring Work" with one exception, that of the grading or inspecting. While lumber inspecting has become a scientific study, in both hard and soft woods, an inspector, nevertheless, must be able to do both handling and inspecting at the same time. The larger part of the handling of lumber is done outdoors and the workmen are consequently exposed to the conditions of weather. This applies to, I would say, 90 per cent. of the total lumber production. Rain and snow and extreme temperatures are the only barriers to work in a lumber yard. The work is healthy.

When I was apprenticed in the lumber business, there was not the thought given to working men that is given them now. Things moved along in a more haphazard fashion. Fortunately, the help at that time was more steady and therefore, in time, became more proficient in its work. In case of injury to a man, the blame was his and he was admonished to be more careful. Laborers sought work near at hand, or within walking distance, hence little thought was given to their physical comfort during working hours. Practically all the handling of lumber was by hand and on heavy timber handling it took real muscle. Canthooks, crowbars and dollies were some of the simple means to help out in a mechanical way. Introduction of labor-saving devices came along very slowly. The matter of devoting time and thought to the prevention of accidents was not a study as it is now. Lumber yards were run on a very crude plan and the awakening came slowly. While there were many employers who were very considerate of their men's welfare, taken as an average the business was truly a "lumbering" business. It is reasonable to assume that the business requiring skilled and educated workmen had to be leaders in considering safety devices and physical comforts. Their surroundings in business must be in harmony with their home surroundings; but, be they educated or uneducated, we must recognize the human side of men. The humanizing of business is the beacon light of our country. The Christian side of men is developing and such features as to the duty we owe the man, I will not say employee, are not thoughtlessly overlooked. To even those who look upon business as business only, the reasonable precaution in protecting life and limb is recognized to be not only a duty under the law, but is realized as the common-sense thing to do to save themselves from, perhaps, financial ruin.

Safeguarding the Public

The first consideration in establishing a yard is the public hazard. Squatter town yards, located on open areas, are a fire hazard and positively unsafe from that standpoint alone. From the standpoint of public safety, all yards should be fenced in. Open yards invite trespassing. The climbing of children on unpiled lumber, whether carelessly or carefully unloaded, may cause it to topple over and cause injury or loss of life. One of the oldtime customs to pile lumber out-

side of the fence line, on sidewalks parallel with streets, was considered good advertising stuff and is allowed by special permit in some cities. It is a public menace of the most hazardous kind to persist in the practice, and its discontinuance in the interest of public safety has my strongest endorsement.

Lumber sheds are today more properly termed warehouses. They are used for storing purposes, and in cities where land values are high are built from 18 feet to 24 feet in elevation. The standard shed has two storeys, the lower bins being up from 6 to 12 inches from the level of the driveway, and the second storey from 8 to 12 feet above floor level. In front of the second floor bins is what may be termed a runway or balcony, ordinarily reached by a "lean-to" ladder.

Light and Air in Lumber Sheds

In building a shed it was my conception to have the balcony wide enough to allow a free and comfortable walk for the man, since a protruding plank might knock him off. Furthermore, the planking is made of a uniform width and surfaced to a uniform thickness so as to prevent a stumble. An experience of my own, in which a workman missed his footing and was compelled to jump down, causing a sprained ankle, and the knowledge of another accident in which a workman fell and received injuries from which he died, led me to believe that the men were not sufficiently safeguarded while working on the balconies. At a large expense, therefore, we put up railings to provide safety. Permit me to say that safety and saving of labor interlock in most cases, and so by careful study we found that we could so construct and set the rail or rails that it became a means of easier handling of lumber also. This work was built with an eye to absolute safety. The wood was free of any defects that might impair its strength and was framed up with bolts and lag screws. In shed No. 1 we put in two lines of 3½-inch diameter removable wood rollers. This work has been erected within the last year and was designed primarily for safety, but has proved a labor saver as well.

Light and air are not only two essentials to good health, but also are mandatory to the avoidance of accidents. Driveways should be wide and transoms should be provided to admit of light, and plenty of it, during day time. Accidents occur in gloomy sheds and are uncalled for. The side transoms, running full length on both sides of the shed, will throw the light clear to the back wall on each side and therefore are much to be preferred over any other type. We have wired our sheds and installed overhead 100-watt lamps for the fall and winter time, but aside from that have wired up and down (enclosed in pipe) on alternate posts on first and second floors, and inserted plugs within easy reach. We use 25 feet of protected heavy wire with guarded lamp at end, so that, in stacking, the workman at the back, twenty to twenty-five feet from the driveway, has the proper light to work by. Sheds should be of good height so as to create better air circulation and make the workman safe from the heat in summer, especially when working on the second floor deck.

Protected ladders prevent accidents. Ladders of the full height of the shed running from floor line to rafter, securely fastened, set at right angle with, and one foot back from the drive, mean safety. Loose or transported ladders tip easily and may be run against. It is unsafe to use loose and exposed ladders in lumber sheds.

Handling Timber by Crane

Heavy timbers were formerly handled by brute strength. Primitive tools, such as a piece of pipe or iron bars, helped some, but muscle was the chief essential to making the timbers move. Timber was the most expensive lumber we had to handle, when safely done. A large crew of men was necessary to avoid accidents by "letting go;" furthermore, we could not pile over 8 feet in height, as the weight of the timber prevented it and the hazard increased with each course upward. The locomotive crane has made timber piling as safe as any work in the yard and piles twenty feet in height are not uncommon. The cost of operation has been decreased about two-thirds and space conserved at the same time. It is possible in many cases to unload a car of timber with safety in one hour. It is needless to mention that all cables and grab-hooks are regularly inspected; thus operators are not exposed to any hazard and, furthermore, the timber swings by and not over them.

The unloading of lumber is not hazardous to any degree, yet loading of heavy timber by crane, both on cars or wagon, is not devoid of risk. Lumber trucks and trailers are being equipped with rollers, so

that by turning a ratchet handle the entire load is safely dropped in two minutes. It must always be remembered that labor-saving devices redound to the benefit of the public when buying, but the further point to consider is the fact that our country saves and conserves much man power that can be used for other valuable purposes.

In speaking of mill operations I do not refer to sawmilling of the log as gotten out of the forest, but apply the term to what is commonly known as re-milling. This means sawing up a square timber of large dimensions into smaller sizes. Then, again, a great deal of timber in its original size is surfaced by being put through a timber planer. Unloading timber by hand is always coupled with an element of danger, and having this in mind, we concluded to construct our plant so as to do this handling by an overhead traveler and a hoist. This meant safety for the workmen. Large timber can be swung from the wagon and one man does the trick without any hazard. After the resawing or surfacing a traveling crane, with one workman on the outgoing side, takes up the piece and places it on the wagon. If I were to tell you that a piece of timber weighing 4,000 pounds can be handled with safety and ease, you can conceive the benefit of this apparatus. This hoist is now being altered to be operated by electricity, adding speed and additional safety.

Ball Bearing Rollers

The unfeeding and offbearing of planking and timber require man power, and we introduced therefor, and that of recent date, a system of ball-bearing rollers on the infeed and outfeed of machines, and likewise for conveying between fixed points. The hazard of accident on handling heavy material is obviated. Rollers are fastened on stands which, being set on casters, are capable of being moved with timber on them up to the rigid frames and then conveyed for distances.

We have used gravity carriers for straight shots for many years, but recently found that it was possible to turn corners with lengths of lumber up to sixteen feet. The prevention of accidents is clearly at hand and the saving of man power very material.

We now approach the safeguarding of the health of the workmen in the yard. In locating a yard, it should be imperative to arrange for drainage. Pile foundations in a straight line on the ground retard the flow of rain and uneven ground surface will hold pools of water which become stagnant and are breeding places for flies and mosquitoes, known to be the worst spreaders of infection and disease. We deemed it wise before starting to pile to provide our yards with drainage and spent large sums to start right. Proper fall of the land from the front line to the rear of the piles affords quick drainage and inlets take up the water and carry it off to the city sewer. Rock foundations, with flat rock set on proper spacing, permit the water from the roadways to flow away below the piles to the same inlets.

The better trades and crafts demand consideration for the person. Laborers, who are the majority of our workmen, do not, however, lay claim to much in the way of comfort. But, gentlemen, a laborer is human, he is part of the nerve and sinew of our nation. The country needs him—we need him, and his family needs him as a provider until such time as his children can help. Education being mandatory, it is reasonable to conclude that our boys will ask for better conditions than those under which our forefathers worked. The evolution is here! Lumber yards must meet the conditions and humanize themselves. About five years ago, in opening up our new yard, I realized that our laborers had no shelter beyond a small shanty in a corner of the yard, or by standing about in the shed. The country was preaching temperance, and yet yards were thoughtlessly blazing a path to the saloon where a workman could sit down in a warm place, at least, until a shower had passed. No man could well accept such hospitality without reciprocating in trade, hence did drinking without desire, and the business took a chance on him when he got back on the job. 'Twas safe and sane to guard your business family and we immediately put up a substantial brick service building, when we got on the lot. The building is modern in every way, centrally located in the yard, easy of access, and provided with a steam heating plant. The laborer has his dressing room to change his apparel; toilets and wash basins afford sanitation and cleanliness. The lunch room is steam heated and supplied with chairs and tables. During rain, sleet and snow the workman can retire in comfort. He can enjoy his lunch in comfort. Having a rain coat, he can change his clothing when necessary, and that in a warm room, and save himself from sickness. Ofttimes have I heard the expression that men won't appreciate it, to which let me say that on the spur of the moment they will not take advantage of the improvement in conditions, and that for the reason of having gone over the same trail. Men must be educated to take care of themselves and may respond slowly. It is for the employer to take the lead and show the way.

Now, having escorted you with care about the yard, and in perfect safety, I will ask you to step into the office for just a moment. Inspiration to do, to plan, to execute, must come from the office. You could not well lay plans for safety in an unsanitary hovel of an office. Every business should be self-respecting enough to have a clean, cheer-

ful and orderly office. Safety of the health also demands good light, ventilation, heat, etc. Every spot a light spot and every desk a light desk make every face a bright face and every one a booster and an enthusiast and a safe bet, because his physical condition makes him sure of himself.

In conclusion let me say one final word. The propaganda for safety has always been a most patriotic matter, but not so seriously heeded or, was, may we say, thoughtlessly set aside. The world war has aroused our nation to think more of and have a greater regard for the man himself. Every man of this nation, whether he was of menial position or executive, is today a patriot. The man power of this nation is being disciplined; caste, creed, rank and position are swept aside in the recognition that, to be a nation, the government comes first and treats all with equal thought and consideration. During this period of the war the democratization of our people will become firmly installed into our souls and beings. The companion in the ranks will be your chum for the remainder of your life.

Tell me, therefore, would you be less considerate of his welfare when the return to peaceful pursuits again takes sway? If he were your lumber stacker would you hold his welfare less dear than when you were together in the ranks?

The desire for safety means a desire to help your brother. We have but blazed a small trail. The future will determine more regard for all things that spell safety, and they will be inspired from within and by the personal desire to help others.

Mr. Millen Passes His Eightieth Milestone

George H. Millen, Hull, Que.

Many letters and messages of congratulation poured in upon George H. Millen, President of the E. B. Eddy Co., Hull, Que., on October 23, when he celebrated his eightieth birthday. Mr. Millen is enjoying good health and is still active and at his desk every day directing the affairs of the company, which he has seen grow from operating a small sawmill to its present magnitude with twenty-five branches and an army of about three thousand employees. He has been in the service of the Eddy organization over fifty-two years, first coming to Hull in 1866 to repair and take charge of a small sawmill which the late E. B. Eddy had rented. Mr. Millen, who was born in Glen's Falls, N.Y., in 1838, had his first noticeable experience when he joined the Northern

army and took part in the American war, and to-day he proudly wears the medal which he won in that campaign. He is a thoroughly practical man and is the inventor of a number of useful machines in the woodworking and paper-making line. He has always believed in good, hard earnest work, and his rise from a humble post to the presidency of one of the largest manufacturing firms in the world has been won by energy, push and devotion to duty. His chief recreation is motoring, and he was one of the first men in Canada to own a car, in which he frequently takes long trips. His host of warm friends trust that he will live to celebrate many more birthdays.

Many Mills Cutting Spruce Logs

Nearly one hundred logging and river crews are at work in the woods, over that number of donkey engines are in use, and at least fifteen sawmills, large and small, are now cutting spruce logs—some of them on double shift. The combined capacity of the mills located in the north is estimated at 600,000 feet in ten hours; five of these are located on Masset Inlet, including the new plants of the Masset Timber Company, Ltd., capacity 200,000 feet in 20 hours, and the Lynch mill, with a double shift output of 120,000 feet. In addition to the pulp company mills at Ocean Falls, Swanson Bay and Quatsino, other large producers of aeroplane spruce are the Prince Rupert Company's new mill at Seal Cove, Prince Rupert, capacity 175,000 feet in 20 hours; Northern Spruce Mills at Skeena City, 150,000 feet; Superior Spruce Mills, Largum Island, 100,000 feet. Other mills to be established will increase the aggregate cut of spruce lumber in the north to 800,000 feet before the end of the year if present plans of the department do not miscarry owing to the labor shortage.

Restrictions on the manufacture of furniture, eliminating all new patterns for the duration of the war and curtailing active patterns fifty per cent., were announced recently by the War Industries Board at Washington.

Chas. M. Bowman,
West Bruce.

THE LUMBERMEN LEGISLATORS OF THE PROVINCE OF ONTARIO

See pages 34-35

The Lumbermen Legislators of Ontario

Ten Members of the Provincial Parliament are Identified with the Industry—Brief Reviews of Their Public and Business Careers

Ten members of the Ontario Legislature, who are actively interested in the lumber business, find time to attend to their own affairs and yet devote several weeks every year in discharging their public duties at Queen's Park, Toronto. They are among the most aggressive and wideawake public servants of the people and some of them have occupied seats in the Ontario Legislature for many years. They have done faithful work in the various committees of the House and taken a leading part in the debates and deliberations of the administrative body which makes the laws and statutes of the banner province of the Dominion. The "lumbermen legislators," as they are more familiarly known, have been foremost in patriotic work, and before their elevation to the legislative chamber of Ontario, not a few of them served the municipality in which they reside as aldermen, reeves or mayors, which qualified them for the higher spheres of usefulness and honor. There is no body of men in public life today who are doing more for their constituencies and for the general welfare of the affairs of Ontario than those associated with the lumber industry. Politically they line up six Conservatives and four Liberals, and a brief outline of the record of each will be read with interest.

Charles M. Bowman, who is one of the leading Liberal members of the Ontario House, has come through six election contests successfully, being first returned for North Bruce in 1898. After 1911 the riding was rearranged and he was chosen to represent West Bruce. Mr. Bowman has been Liberal Whip for the past sixteen years, and has been engaged in the lumbering, tannery and contracting business. He was President of the Southampton Lumber Company, Limited, operating in the Bruce Peninsula for ten years, and later was President of the Great Lakes Dredging Company, which took a large job for dredging at Fort William, the contract being then one of the largest ever made in Canada. Mr. Bowman is connected actively with several woodworking industries, being a director of the Bell Furniture Company, Southampton, Stevens-Hepner Company (brushes and brooms), Port Elgin, and the Durham Furniture Company, Durham. A former president of the Southampton Board of Trade and a former Reeve of the town, he has always taken a deep interest in curling and bowling. He was born at St. Jacobs, Waterloo County, and is in his fifty-sixty year.

John Carew, who represents South Victoria, being elected in 1914, is at the head of the John Carew Lumber Company, of Lindsay. He is a practical lumberman, from the felling of the timber to the manufacturing and marketing of the same, and started his career as a lumberjack. There is no position in the camps or mill which he has not filled, and he is able to take any post to-day if required. His plant at Lindsay has a cutting capacity of about seven million feet a year and the principal timber sawn is white pine and spruce. Last year Mr. Carew took out about four million feet in his limits in Harvey and Cavendish townships, Peterborough County, and is at present operating two camps, but expects to put in two more if he can obtain the labor. Not only does he conduct a busy sawmill at Lindsay, but he also runs a planing mill and retail lumber yard. He has two sons in overseas service. Col. Frank J. Carew is with the Canadian Forestry Corps in France, where he has been since 1916, and has under his direction several busy mills getting out timber for the Canadian troops. Another son, Arthur W. Carew, left a few weeks ago for overseas with the C.O.T.C., and is now attached to the Imperial Artillery. Arthur has always been a noted athlete and won the championship last summer at the Niagara camp. During his school days at the Lindsay Collegiate Institute, he captured the junior and senior gold medals, and for a couple of years was a member of the All Star hockey team of Toronto. Before the war broke out both sons were associated with their father in the lumber business. Another son, Charley, is in Lindsay at present, but may go overseas any time. Mr. Carew has been an active member of the Lindsay Board of Trade and is a useful and progressive citizen and a large employer of labor. In religion he is a Presbyterian, and in politics a Conservative. He was born in Emily township, Victoria County, in 1862.

W. D. Cargill, who is the man from South Bruce, has been with in the precincts of the Ontario Legislature since June, 1914. His father represented East Bruce in the federal parliament for several years, and died in the House of Commons in 1903. Mr. Cargill is the

President of Cargill, Limited, which firm finished the cutting of pine and hemlock on their limits in Bruce County several years ago. Since then they have been engaged in cutting other timber into staves, heading, hoops and some lumber. Cargill, Limited, also own a planing mill and previous to the war manufactured doors, sash, mouldings, casings, store and office fittings and interior finish of all kinds. Mr. Cargill is a director of the Hepworth Manufacturing Company, Hepworth, Ont., and President of the Dominion Well Supply Company. He was born in Nassagaweya Township in 1865, is a Presbyterian and a Conservative. Previous to becoming a member of the Ontario Legislature he contested South Bruce in the Conservative interests for the Federal House in 1913.

E. A. Dunlop is one of the youngest members of the Ontario Legislature, and has been a factor in that body for the past fifteen years, with the exception of the term from 1908 to 1911. "Eddie" has never been defeated at the polls. He is President of the Pembroke Lumber Company, a director of the Massey Lumber Company, and Vice-president of the Thomas Pink Company, the widely-known manufacturers of lumbermen's tools. He is manager of the hardware business of Dunlop and Company, Pembroke, which specialize in lumbermen's hardware, and is prominently connected with a large number of other enterprises, such as the Steel Equipment Company, the Jocko River Improvement Company, and Continental Bag and Paper Company. Mr. Dunlop is a former Director of the Canadian Lumbermen's Association, and a director of the Pembroke Woollen Mills, the Victoria Foundry and Machine Company, and the Pembroke Southern Railway, and also President of Pembroke Electric Light Company. He served as an alderman in his native town for five years, and has always taken a deep interest in military affairs, being a Major of the 42nd Regiment. On October 26 last Mr. Dunlop celebrated his forty-second birthday. His father, the late Arunah Dunlop, who died in 1892, represented North Renfrew in the Ontario Legislature at the time of his death, and the son has made a worthy successor. Mr. Dunlop is a Methodist in religion and a Conservative in politics.

Major J. I. Hartt, of Orillia, is widely known through his overseas services in connection with the Canadian Forestry Corps. A sketch of what the boys under him accomplished appeared in the "Canada Lumberman" a few months ago. Major Hartt was first elected a member of the provincial parliament in 1911. Of Irish extraction, he was born in the year of Confederation, 1867, coming to Canada in 1884. For several years he was a member of the Orillia town council, and has been engaged in the lumber business for a long period. He was with the Gilmour Company in Trenton for thirteen years, and later with the Fesserton Timber Company, after which he formed the firm of Hartt & Steele, and subsequent to the dissolution of that partnership he carried on business himself. Major Hartt represents East Simcoe and at the last annual gathering of the Orange body was appointed Grand Master of the Grand Orange Lodge of Ontario West. The Major spent many months overseas in forestry work and one of the achievements of the Canadian lads under him was the building of a sawmill of 35,000 feet daily cutting capacity, in just nine days in the South of France.

George C. Hurdman is a product of the national capital, where he first saw the light of day in 1870, coming of good United Empire Loyalist stock. He was educated at Ottawa and was elected a member of the Ontario Assembly in 1914, defeating ex-Mayor J. A. Ellis in West Ottawa by a majority of 108, running in the Liberal interest. Mr. Hurdman is President of the Hurdman Lumber Company, Limited, wholesale lumber dealers, and also president of the Canadian Quarries and Construction Company. He is one of the leading younger business men of the Capital and enjoys a wide measure of esteem. Always taking an interest in matters military he served for four years in the 43rd Regiment, Ottawa and Carleton Rifles, and a few years ago accepted a commission in the Princess Louise Dragoon Guards.

Zotique Mageau, who looks after the interests of Sturgeon Falls in the Ontario Legislature, was first elected a member of the Ontario

in 1911 as a Liberal standard bearer and was returned in 1914. He has been in the lumber business all his life, being president and managing director of the Field Lumber Company, Limited, Field, Ont., which is located on the C. N. R. main line. The company operate a sawmill at this point and intend cutting about 5,000,000 feet of pine during 1918 and 1919 and 1,000,000 feet of birch, the latter during the coming winter. Mr. Mageau also conducts a private lumber concern at Sturgeon Falls and expects to cut about 2,000,000 feet of birch and hemlock. This enterprise is conducted by himself, with, of course, the assistance of a manager in charge of the work.

J. A. Mathieu hails from Rainy River, where he has lived ever since 1902. He has been sitting on the floor of the Ontario House for the past seven years. Leaving the farm in Alma, Wisconsin, where he was born in 1869, he followed the lumber game in that State and Minnesota. He is managing director of the Rainy River Lumber Company, Vice-president of Shevlin-Clarke Company, Limited, and also a Vice-president and Director of Shevlin-Mathieu Lumber Company, and manager of the Namakin Lumber Company. The mills of his companies are principally at Fort Frances and Rainy River. Mr. Mathieu is a Conservative in politics and knows the lumbering business in all its departments. He is a public spirited and broad minded citizen.

Udney Richardson resides in the village of Elora in Wellington County, and is of Scotch descent. He also saw municipal service be-

fore coming to Queen's Park, being Reeve of Elora for two years. A Liberal, he was first elected to the Ontario House in 1911. Mr. Richardson will this month celebrate his forty-ninth birthday. He is engaged in the retail lumber business in Elora, where he also deals in grain. West Garafraxa township is his natal spot and he is a successful business man, well spoken and well thought of by his fellow Legislators.

James Thompson has occupied a seat in the Legislative Chamber in Toronto for ten years, and Havelock is his home burg, although he spends much of his time in Toronto, being President of the Monteith Pulp and Timber Company, who operate a sawmill and roasting plant on the Driftwood River in Northern Ontario. His company also handle large quantities of pulp wood and took out about fifty thousand cords during the past year, which was shipped principally to the Thorold district and to Wisconsin. Mr. Thompson is also a director of Can Conservers of Canada, a new industry which has been started in Toronto for reclaiming old cans, sterilizing, repairing and re-topping them, and thus making them as good as new. He was Reeve of Havelock for four years and Warden of Peterborough County in 1908. Born in Smith's Falls in 1868, of Irish parentage, Mr. Thompson is President of the Toronto Investment Company, the Peterborough Cement Roofing Company, and the Casey Mountain Mining Company, Toronto. He was engaged in the dry goods business in Havelock for a number of years, and that he enjoys the confidence of his constituents is evidenced by the fact that in three provincial elections, he has emerged victorious from hard fought contests in the Conservative interests.

The Proposed Standard Finished Sizes

One of the important matters for the consideration of our association is the adoption of standard finished sizes for the chief lines of lumber and timber composing their stocks. At present there is no standard table of sizes and the practice varies considerably in different parts of the province.

The subject has been under consideration by many members of the Association. It was referred to in the report of the Committee on Arbitration and Inspection at the special general meeting on September 3rd, and a resolution was then carried recognizing the desirability of uniform sizes for millwork and the importance of instructing architects and the general public in regard to regular standard sizes. It was decided at this meeting that it would be best to submit the matter to the various districts of the association, so that it could be thoroughly discussed and then finally acted upon. Each district has now been asked to take the matter up. The dealers in Toronto have been the first to come forward with a definite recommendation.

At a meeting of the Toronto dealers which was held on October 16th a resolution was carried adopting as the official standard finished sizes for Toronto, for white pine, spruce and hemlock, those which are shown in the following table:

STANDARD FINISHED SIZES

Flooring (D. & M)	White Pine Spruce Hemlock
-------------------	---------------------------------

1 x 3 Finished	13/16 x 2 1/2
1 x 4 Finished	13/16 x 3 1/4
1 x 6 Finished	13/16 x 5 1/2
1 1/4 x 3 Finished	1-1/16 x 2 1/2
1 1/4 x 4 Finished	1-1/16 x 3 1/2
1 1/4 x 6 Finished	1-1/16 x 5 1/2

Clear Finish (S 4 S)

1 x 3 Finished	13/16 x 2 1/2
1 x 4 Finished	13/16 x 3 1/4
1 x 5 Finished	13/16 x 4 1/2
1 x 6 Finished	13/16 x 5 1/2
1 x 8 Finished	13/16 x 7 1/2
1 x 10 Finished	13/16 x 9 1/2
1 x 12 Finished	13/16 x 11 1/2
1 1/4 x 4 Finished	1-1/16 x 3 1/2
1 1/4 x 6 Finished	1-1/16 x 5 1/2
1 1/4 x 8 Finished	1-1/16 x 7 1/2
1 1/4 x 10 Finished	1-1/16 x 9 1/2
1 1/4 x 12 Finished	1-1/16 x 11 1/2
1 1/2 x 4 Finished	1-5/16 x 3 1/2
1 1/2 x 6 Finished	1-5/16 x 5 1/2
1 1/2 x 8 Finished	1-5/16 x 7 1/2
1 1/2 x 10 Finished	1-5/16 x 9 1/2
1 1/2 x 12 Finished	1-5/16 x 11 1/2
2 x 4 Finished	1 3/4 x 3 1/2
2 x 6 Finished	1 3/4 x 5 1/2
2 x 8 Finished	1 3/4 x 7 1/2

2 x 10 Finished	1 3/4 x 9 1/2
2 x 12 Finished	1 3/4 x 11 1/2

Width of finish if not dressed one or both edges, 1/4 in. more than above.

Common Boards (S 4 S)

1 x 4 Finished	13/16 x 3 3/4
1 x 6 Finished	13/16 x 5 3/4
1 x 8 Finished	13/16 x 7 3/4
1 x 10 Finished	13/16 x 9 3/4
1 x 12 Finished	13/16 x 11 3/4

Common Dimension (S1S & Sized or Jointed on Edge by either Saw or Planer, or S 4 S).

2 x 4 shall be	1 3/4 x 3 3/4
2 x 6 shall be	1 3/4 x 5 3/4
2 x 8 shall be	1 3/4 x 7 3/4
2 x 10 shall be	1 3/4 x 9 3/4
2 x 12 shall be	1 3/4 x 11 3/4
3 x 6 shall be	2 3/4 x 5 3/4
3 x 8 shall be	2 3/4 x 7 3/4
3 x 10 shall be	2 3/4 x 9 3/4
3 x 12 shall be	2 3/4 x 11 3/4

Timber (S1S1E or S4S).

4 x 4 and larger 1/2 inch off thickness and width on all kinds of wood.

The adoption of these standard sizes by the dealers in Toronto brings the question definitely before the Association in such a shape that there is a reasonable possibility that this important matter can soon be settled in similar manner for the whole province.

In order to bring matters to a head, copies of the table of sizes adopted by the Toronto dealers have been sent to the secretaries of each of the local districts with a request that they consider the suitability of these sizes in connection with the trade in their districts and report at the earliest opportunity to the secretary of the Association. When a definite set of standard sizes has been officially recognized by the Association, for use throughout the province, it is the intention that they be prepared in printed form and furnished to all architects, building engineers, etc., so that in the preparation of specifications in future these sizes may be adhered to. No retail lumber dealer needs to be told what a great advantage this will be to the whole trade.

Ply-Wood Wanted

A reliable New York house wishes to get in touch with Canadian manufacturers of ply-wood, preferably situated in Eastern Canada. Name and address may be obtained from the publishers of the "Canada Lumberman."

How Montreal Man Develops Trade

J. P. Dupuis Conducts Progressive Yard—Has Adopted Live Methods in Management and Distribution

Mr. J. P. Dupuis, president of J. P. Dupuis, Ltd., Church Street, Verdun, retail lumbermen and manufacturers of interior trim, is a hustler. He is a man with ideas, who goes after the business, and makes openings for his trade. When, in the months immediately following the declaration of war, a blight fell on every industry, Mr. Dupuis decided that something radical must be done to keep his staff together and to employ a very large number of horses owned by the firm. He called his staff together and told the men that he had made up his mind to branch out in another direction—would they help, and put their best energies into the work? Sure they would. The result was the opening up of a new business which fitted in with the lumber trade, and the keeping together of "the boys." The new business paid, and when the lumber end picked up was sold, having served its purpose of bridging the crisis.

With the idea of giving service to the customers, the firm have a

J. P. Dupuis, President

L. A. Daigle, Managing Director

department under a qualified architect, which prepares specifications—it is a service which is appreciated, too.

Mr. Dupuis has had a wide experience as a lumberman, both in the manufacturing and selling ends. He is the son of a lumberman, and has been in the game all his life. For seven years he was in the United States; was manager of the Tobin Manufacturing Company, and assistant manager of the Danville Lumber Company, both with offices in Montreal. He established the present business in 1910, and it is now one of the largest in Montreal—the yards and mill covering 92,000 feet, besides which there is a yard on the banks of the Lachine Canal into which lumber is loaded direct from the boats.

The company carry on an average \$100,000 worth of stock, some of which is for the purposes of the mill. The principal wood is spruce, followed by pine and birch; gumwood, maple, oak and chestnut are also stocked. The wood is kiln dried on the blast air system, the equipment enabling a portion of the air to be diverted for the heating of the mill.

"There is a growing demand for standard doors, sashes, and windows," said Mr. Dupuis. "Our experience is that many houses which were partly built when war broke out are now being completed. The country demand is also improving, as general business in the province is satisfactory."

About 35 per cent. of the company's stock is carried under roof, the balance is piled. This year the proportion of dressed lumber is higher than previously—65 per cent., while the amount of green lumber is very small.

Collections, said Mr. Dupuis, are good. The company allow 2 per cent. off, 30 days, for contractors. No charge is made for delivery, except in the case of very small orders.

The company have a planing mill which returns a profit, but as it is operated in connection with the sash and door factory, it can be run all the year round. It is, therefore, something more than a convenience to customers.

In the mill section, the stock-keeping system of the Mill Work Cost Information Bureau is followed, the accounts of the mill work and dressing mill being kept separate from those of the lumber business.

As to advertising, Mr. Dupuis declared, "It is the life of our business." The company advertise in the local and trade papers and also in journals circulating in the province, and obtain satisfactory

results, so much so that it is intended to extend the publicity end. In this connection, Mr. Dupuis pointed out that the tendency was for the small retail lumber dealers in country places to disappear, owing to the difficulty of securing adequate stocks. The result is to concentrate lumber at central points, and it is incumbent on the large retailers to advertise if they want to reach the country trade.

Birch flooring indicates a brisker demand, there being an inclination to use hardwood flooring in the ordinary run of houses. This was not so a few years ago, but the people now require better accommodation than before.

Mr. L. A. Daigle is managing director of J. P. Dupuis, Ltd., and Mr. Ph. Morin the superintendent.

Personal Paragraphs of Interest

H. H. Ross of the Ross-Saskatoon Lumber Co., Waldo, B.C., was in Toronto and other Eastern cities recently on business.

A. K. Johnson of J. P. Johnson & Son, Toronto, who was laid up for several days with the influenza, is able to be around again.

J. R. Carter of the Fesserton Timber Co., Toronto, is back at his desk after being laid up for some time with the prevailing epidemic.

E. R. Sutherland of Winnipeg, representing the Otis-Staples Lumber Co., Wycliffe, B.C., was in Toronto recently, calling upon the trade.

C. W. Wilkinson, manager of the Union Lumber Co., Toronto, who was confined to his home several days by illness, is able to be around again.

S. E. Hall, President of Hall Bros., Limited, Toronto, who has been confined to the house with influenza for a few days, is able to be out again.

A. E. Gordon of Terry & Gordon, Toronto, who has been on an extended business trip to the Coast and Mountain mills in British Columbia, has returned home.

H. S. Perkins of Calgary, representing the Mountain Lumber Manufacturers Association of B. C., is spending some time at various points in the East, on business.

The many friends of Hon. M. J. O'Brien, of Renfrew, Ont., regret to learn that his wife passed away recently at her home after only two days illness from pneumonia.

George P. Hart of Hart and McDonagh, Toronto, who was taken seriously ill with influenza while in North Bay, and was confined to his room for several days, is now convalescent.

Mrs. Russell Hern, wife of the Secretary and Manager of the Hern Hardware Co. of Huntsville, Ont., and daughter of Wm. Turnbull, late Secretary of the Huntsville Lumber Co., died recently after an attack of la grippe.

N. D. Carter of Deseronto, Ont., who was a prominent merchant in that town for the last twenty years, passed away recently after four days' illness from pneumonia. He was a nephew of W. W. Carter, President of the Fesserton Timber Company, Toronto.

Senator Henry W. Richardson, of Kingston, passed away recently, aged 63 years. He was a prominent grain merchant and was widely known to the lumbermen of Ontario with whom he had extensive business relations. Mr. Richardson was called to the Senate in January 1917.

Many expressions of sympathy have been tendered to T. J. Stevenson, sales manager of the Riordon Pulp and Paper Co., on the death of his only surviving son, Bayne Hamilton Stevenson, aged 27. He died from pneumonia at Savannah, Ga., and formerly lived with his parents in Montreal.

T. M. Lewis, formerly sales manager of the Okanagan Sawmills Limited, Enderby, B.C., has joined the staff of Knox Bros., sole representatives of the Victoria Lumber & Mfg. Co., Chemainus, B.C., for Eastern Canada. Mr. Lewis is attached to the Toronto office of Knox Bros., and in association with J. M. McNeil, 707 Bank of Hamilton Bldg., is calling upon the Ontario trade in the interests of B. C. forest products.

Several Montreal lumbermen have been laid up with influenza, and at the time of writing two, at least, were in a critical condition. Mr. E. T. Todd, local manager of Watson & Todd, Ltd.; H. C. Blair and W. B. Blair, of Blair & Rolland, are on the sick list, the two first named being very ill. Pat O'Brien, of W. and J. Sharples, and C. Villiers, of the Canadian General Lumber Co., Ltd., have returned to business after attacks of the disease.

The death from influenza of Mr. Nastor Perron, retail lumberman, Lachine, P.Q., is announced. He was secretary and managing director of Lord, Bourbonnais, and Perron, Ltd., retail lumbermen and sash and door manufacturers. Mr. Perron, who was 36 years of age, was formerly connected with the Lumber & Construction Co., Ville-St. Pierre, and a few years ago started the business at Lachine, with the help of Blair & Rolland, Montreal.

The Oldest Lumberman in the World

C. La Fortune, Port Dover, Ont., Has Passed the Century Mark and is Still Active and Erect

C. La Fortune, Port Dover, Ont. photographed on his 100th birthday

was written Mr. La Fortune was out in his garden cutting down weeds with a hoe.

Five of his children are living, one son, Frank, being a resident of Simcoe, Ont., while four daughters all reside in Norfolk county. Mr. La Fortune has fifteen grandchildren and twenty-one great-grand-children, is erect and hearty, and always pleased to meet any of his neighbors and numerous descendants. He has been a total abstainer all his days; neither does he smoke nor chew tobacco. The La-Fortune family are noted for their remarkable longevity. A brother died at 103, a sister at 98, and three other brothers all lived to see 92 years. The subject of this reference has many friends who hope that he will live to observe many more birthday anniversaries.

Born in 1818, one mile north of Montreal, he resided in Quebec province until he was a lad of fifteen, being of French-Canadian extraction.

On coming to Port Dover he put up over night at the tavern where now stands the Norfolk House, which was at that time all surrounded by bush. Wolves kept him awake with their constant howls. The next day the family pushed on to Port Rowan, following the course of a blazed trail through the woods. Mr. La Fortune settled on the third concession west of Port Rowan in what is known as De Blackie's Hollow, named after an American lumberman. There he helped to cut a clearing and built a humble hut. He felled pine trees all winter long and none were less than four feet in diameter. Four hundred masts were cut, Mr. La Fortune's work being to fell them, while others followed up and peeled them. The timber was then towed to Big Creek with oxen and out into Port Rowan Bay, where it was rafted together and went down Lake Erie and Lake Ontario, via Port Maitland and what now forms the Welland canal, and on along to the St. Lawrence river, as far as Montreal, the trip occupying many months. Mr. La Fortune, who followed timber cutting and driving for about sixty-five years, has noted great changes in the trade since those early days, and loves to recount his experiences and trials of the pioneer period. He is proud of the commanding position which Canada holds to-day in the manufacture of the products of the forests.

Mr. La Fortune also worked for many years in lumbering operations on Big Creek, from Tillsonburg to Port Royal in Norfolk county, where he knows intimately every acre of the hundreds that he helped to clear before the vast majority of the readers of this article had started on their earthly pilgrimage or had even given the proposition a thought.

"Standardizing Leather Belting"

With the sole object of impressing upon users that belting can be standardized, and the value and economy derived from purchasing belting on some definite, scientific, basis, there has been issued by the Graton & Knight Manufacturing Company, of Worcester, Mass., a neat and attractively printed book entitled "Standardized Leather Belting," which will be sent to anyone desiring a copy. The publication contains much comprehensive and timely information, which it took practically a year to compile. All the facts are set forth in a logical and practical way, which makes the reading matter both interesting and instructive to any one concerned in power transmission.

belting and also the standardization of any other machine part and tells how this can be applied in any manufacturing plant. A set of standards in definite form is presented to guide belting users in selecting the proper belt for different drives and various conditions of service. Another section is devoted to a complete description of the standardized brands of leather belting, while there are pages containing mechanical rules and tables which should prove useful to any belting user in determining the horse power of belting, width and length required, and how belting should actually be ordered. There are also recommendations for the employment of standardized brands in all the principal industries of the country.

Sudden Death of Sales Manager

George A. Smith, who was sales manager for the Ontario Wind Engine and Pump Company, Toronto, passed away on October 13th, from pleuro-pneumonia. He had been in the service of the company since 1909, starting as invoice clerk, and by industry and perseverance had been advanced from one position to another until in April of this year he was promoted to the management of sales. The late Mr. Smith was born in Thornbury, Ont., thirty years ago, and was a graduate of the Canada Business College, Chatham. He enjoyed the esteem and confidence of his employers and the public generally and, in his passing, a promising career has been brought to an untimely close. The remains were interred in Thornbury beside those of his father in the family vault.

Brief Happenings From the East

A new lumber company has been established in New Brunswick, and has been incorporated under the name of the Nerepis Lumber Company Ltd. The firm is composed of Bliss H. Dunfield of Halifax, N.S., Harry C. Heans of St. John, and Gordon G. Scott of Fredericton. The firm's head office will be at Welsford, N.B. They have been empowered to take over a saw mill at Sagawa, King's County, and to run a general milling, lumbering, and pulp wood business.

Richard A. McFadgen of Fredericton, N.B., a well-known lumber surveyor, recently paid a visit to St. John. Mr. McFadgen is well known in the province, as he has been in the employ of a number of large concerns.

Word was received at Chipman, N.B., recently, that Francis J. McNeil died in Prince Albert, B.C., from heart trouble. He is a former New Brunswicker and has been in the West for a number of years. For the last few years he was engaged in lumbering.

Hon. W. E. Foster, premier of New Brunswick, has been asked by the New Brunswick Lumber Association to see if something could not be done to provide them with help this winter in order to get out their season's cut. The Premier took the matter up with Brigadier-General A. H. Macdonell, commander of Military District No. 7, and has received the following reply: "I am pleased to advise you that the matter has been taken up with militia headquarters, Ottawa, and they have ruled as follows: "In order to facilitate productive employment during the winter months, men exempted as farmers should apply to the registrar for permits to engage for the winter in some occupation of national interest, such as lumbering, munition work, etc. Such permits will serve to enable exempted farmers to pursue other useful occupations for the months during which farming operations cannot be carried on."

Many New Charters Are Granted

A charter has been granted to the Harbor Lumber Company, Limited, with head office in Vancouver, and a capital stock of seventy-five thousand dollars. The company will take over the business and assets of the Harbour Lumber Company and has the power to manufacture and deal in timber, lumber and woodenware, as well as to produce and lease timber limits or berths.

The Golden West Lumber Co., Limited, has been incorporated with head office in Vancouver with a capital stock of ten thousand dollars, to carry on a general lumber, timber and logging business.

The Forest Lumber Co., Limited, Vancouver, is a new organization with a capital of one hundred thousand dollars to carry on the business of saw timber merchants, sawmill and shingle mill owners, loggers, etc.

The Grassy Bay Logging Co., Limited, Vancouver, with a capital stock of one hundred thousand dollars, is granted wide powers, according to the recent charter obtained. In addition to a general lumbering and timber business the company is authorized to cut and get out saw logs and to manufacture shingles, lath, sash and doors.

There has been incorporated the Vancouver Cooperage Company, Limited, whose chief place of business is Vancouver. The capital stock of the new organization is twenty-five thousand dollars and the company will conduct business as coopers and manufacturers of barrels, kegs, casks, tubs, vats, tanks, buckets, pails, staves, veneer,

Shipbuilding News, East and West

The French Government has awarded contracts for the building of a number of wooden vessels in Canada and the United States, and the Toronto Shipbuilding Company has been offered a contract to build a number of oil-driven wooden vessels. Similar types are now under way in the United States for the Australian Government. Keels are laid in the shipyards of Toronto for ten vessels.

The concrete ship *Faith*, first of its type built for ocean cargo carrying, and hailing from San Francisco, has arrived safely at a gulf port, according to word received by agents of her owners. The vessel, after carrying 2,000,000 feet of lumber from California to Chili, took on a load of 4,000 tons of nitrate and came through the Panama canal. The *Faith*, which was "poured" rather than built, stood the sea experience without damage, her agents said, and is ready to sail for another port as soon as her unloading and reloading is finished.

A new wooden freight ship is being turned out of the 171 shipbuilding slips of Washington and Oregon every thirty-six hours, according to Frank Branch Riley in an interview dealing with war activities of the International Northwest, Washington, Oregon and British Columbia.

Canada's shipbuilding industry, together with operations by all the other allied countries, is assured of activity for some years, according to the summary of the shipping situation recently made by Chairman Edward N. Hurley, of the Shipping Board of the United States, in a recent speech at Philadelphia. He stated that the United States and its allies would overcome submarine losses and place the tonnage of the world on a normal basis in four years, if the war continued until that time. This would involve the construction of no less than 48,557,080 deadweight tons of shipping by the allies by the autumn of 1922. The shipbuilding industries of all the countries now at war with Germany will then be centres of activity for the next four years, to bring the world's tonnage back to normal.

British Columbia's contribution to allied shipping, to September 30th of this year, is given as 175,000 tons actually launched, according to a scheduled statement in the B. C. Industrial Progress for October. A total of 52 vessels have been launched. New Westminster's part in this war effort was four standard wooden steamers for the Imperial Munitions Board aggregating a total deadweight tonnage of 11,200. Port Coquitlam yards furnished two wooden vessels of standard type for the I. M. B. or 5,600 deadweight tons, and one wooden steamer of the same type as the standard I. M. B. boats, of 2,800 deadweight tons. British Columbia's war shipbuilding industry has been built up in the past two years. At the beginning of 1917 no ocean tonnage had been placed in the water in British Columbia, and no shipyard existed for the construction of such vessels, nor were B. C. machine shops equipped for special work involved in shipbuilding. The production of 175,000 tons of shipping under these conditions, the majority launched during the present year, is rightly regarded as an accomplishment of no mean order.

The efforts of British Columbia steel shipbuilders to obtain better terms from the Dominion Government have met with success, it is announced, and news from Ottawa says that J. Coughlin & Sons are to build four steel vessels for the Dominion Government. The Wallace Shipyards will also construct four ships, and the Victoria Machinery Depot has been given orders for two. The value of the contracts is \$1,800,000.

Contracts for wooden boats for the French Government have been given to firms in the Province of Quebec. Fraser, Bryce & Co., Montreal, have received orders for ten boats, the National Shipbuilding Corporation, Three Rivers, formerly known as the Three Rivers Shipbuilding Co., a similar number, and the Davie Shipbuilding and Repairing Co., Ltd., Lauzon, five boats.

Vancouver business interests are related at the news received from Ottawa to the effect that coast shipbuilding concerns have been awarded Dominion contracts for the construction of ten steel ships, of which eight are to be built in Vancouver, at a valuation of \$16,000,000. These embrace the largest orders which have yet reached the coast, and they are on a basis which removes many of the disabilities under which B. C. yards have previously labored. Coughlin & Sons, of Vancouver, will build four ships of 10,000 tons, Wallaces, whose yards are in North Vancouver, are to construct the same number of 8,100 ton ships, while the Victoria Machinery Depot will handle two boats of the latter class.

The Norwegian government has awarded the contract for three wooden ships to C. C. Cholberg Co., Victoria, B. C. The Foundations Company of British Columbia, Limited, have been given the contract by the same government for twenty wooden vessels of 3,000 to 4,000 tons deadweight.

The first wooden vessel built by the McKenzie Shipping Co., River John, N. S., was launched, and a second one will be built in the near future.

"The War Toronto" was recently launched from the yards of the Toronto Shipbuilding Co., and is a sister ship of the "War Ontario," which was launched in June last. The latter will start on its maiden trip in a few days. The "War Toronto," which is equipped with triple expansion engines, has a length over all of 259 feet, a breadth of 43 feet, and a depth of 25 feet. The steamer, which is of 3,200 tons deadweight, was built to the order of the Imperial Munitions Board, and will sail between England and Canada.

A federal charter has been granted to the British American Steamship Co., Limited, Toronto, with a capital stock of \$3,000,000. The company is empowered to purchase, contract for, build, acquire, charter, hire, lease, sell, repair, sail and operate steamships, sailing vessels, and other vessels of all kinds, and to carry on the business of freighters, common carriers, forwarders and traders, etc. The incorporators are:

THE SWEEPERS OF THE SEA

Mr. Punch—"Risky work, isn't it?"

Trawler Skipper—"That's why there's a hundred thousand of us doing it!"

—Published through courtesy of "Punch."

Alexander Fasken, George Herbert Sedgewick, Robert Spelman Robertson, John Wellington Pickup, James Atchison, Norman Stuart Cudwell and Duncan Angus McCrimmn.

Shipyard workers of all ranks are entitled to an increase of two cents an hour all around in accordance with the agreement of June 1, which set the scale of wages for all labor classifications for the duration of the war, and only subject to such increases as were justified by the increased cost of living. This is the decision of W. L. McDonald, Vancouver, adjutor of shipyards disputes, after a careful investigation. The increase will be effective as from September 1.

On the recommendation of Hon. C. C. Ballantyne, Minister of Marine and Fisheries, Ottawa, a contract has been entered into by the government with the Victoria Machinery Depot, of Victoria, B. C., for the construction of two ships of 8,200 tons. This brings the number of ships, the construction of which has been authorized by order-in-Council, up to twenty-five, and some additional contracts will be closed within a few days. Of the 25 ships built, in the course of construction, or contracted for, ten are of 8,100 tons capacity, six of 5,100 tons, three of 3,400 tons, four of 3,750 tons and two of 3,400 tons.

Competition for business will undoubtedly be keen after the war. Are you working out your plans to get your share? A carefully-directed advertising campaign will help you. It costs nothing to consult the Service Department of the Canada Lumberman and Woodworker. Perhaps we can help you.

Forsees Big Demand for B.C. Lumber

Commissioner Beale Thinks that Eastern Canada Will Use Eventually Quarter Billion Feet Annually

L. B. Beale, late of Victoria, B.C., who is now Lumber Commissioner for the government of British Columbia, with offices in British Columbia House, Regent street, London, England, previous to his departure for overseas, some weeks ago, spent considerable time in investigating the Eastern Canada markets, and sizing up the situation so far as the present and after-the-war demand for B. C. forest products is concerned. He lately presented his first report to Hon. T. D. Pattullo, Minister of Lands for B. C., in which he refers to the developing market in the East for pine, spruce and fir. Mr. Beale thinks that the eventual extent of the eastern markets is a quarter billion feet annually, but that to attain this quantity may require water transportation or distributing stocks laid down at strategic points by rail (or both), but with proper handling British Columbia can, in his opinion, have that much business in this market. It will probably be necessary, he adds, however, to saw and dress some lines rather thicker than at present, especially in our mountain stocks of soft and white pine and interior spruce, as these species would come into direct competition with the native woods, though it is probably easier for us to supply better uppers in quantity than Eastern Canada can produce.

"I believe our mountain mills would be justified in looking to this market for a good share of business. Stock must be carefully manufactured and delivered with reasonable despatch. Eastern lumbermen are not expecting to increase production materially for a year or two, and Eastern lumber will not get better in grade. One or more selling agencies representing a number of mountain mills might be a satisfactory method of handling their stock.

"As before stated, however, in order to get a generous share of Eastern business, it is necessary for our woods to become better known and more generally specified, together with closer attention and aggressive action by our mills.

Mr. Beale also takes occasion to remark that manufacturers interviewed were inclined to think that their plants were now about large enough to take care of the business coming to Canada until the end of the war. Mr. Beale said "When peace is declared and international treaties are fixed up I believe Eastern Canada will expand industrially in no uncertain manner, especially if inter-Empire preference becomes a reality.

"Fluctuating demand for emergency purposes will rule until the war is over. After that our business can increase in the East in all grades and all lines (from box shooks to clears, timbers and finish) to 250,000,000 feet annually, and perhaps more as time goes on. Prices should then be sufficiently attractive to our industry, as the competitive woods from Eastern Canada and the South will steadily decline in volume and quality, and the Pacific Coast will in a few years be the main source of supply. British Columbia lumber is in this market to stay in increasing quantities if our mills supply the material desired.

"Development work commenced before the war and stopped at various stages since, is in line for completion after the war, and will require a great deal of lumber. Included in this is harbor work, railway work, car building, Hydro-electric development, telephone poles, cross-arms, etc. Wood-using industries turning out agricultural implements, ladders, churns, washing machines, silos, and so on, use immense quantities of wood, and such industries must look to new sources of lumber supplies if their business expands.

"To obtain a generous share of all this business British Columbia should carry on educational work, and her mills must be willing to manufacture for the market. It must be remembered that Eastern Canada is an attractive market for other outside timber-producing regions, such as the southern pine country, the inland Empire, and recently our own mountain mills."

Finding an Outlet for Eastern Lumber

**New Markets Developed for Nova Scotia Forest Products
—Many Old Vessels Called into Requisition**

Lumber operators who have had their products shut out of the United Kingdom on account of the war have been quite successful in finding new markets elsewhere, says a correspondent from Parrsboro, N.S. Several shipments have recently been made from this port to the Canary Islands, and several cargoes have gone to South Africa this season. A new tern schooner which sailed from Parrsboro a fortnight ago, carried more than half a million feet of deals and scantling. Prices are good and they have to be to cover the greatly increased cost of exporting. Freight rates are excessive in comparison with ante-bellum prices, and they have to be, in their turn, to make up, among

other things, for the unprecedented advance in wages and the greatly increased cost of provisions.

Sailors, who, a few years ago, were glad to get from twenty-five to thirty dollars a month, are now getting as high as one-hundred and thirty dollars a month for a South African voyage. Mates who were once satisfied with from forty to fifty dollars now get any price up to \$175 a month, and perhaps more for a deep-water voyage. Salt beef, salt pork and molasses cost fully three times their former prices; flour and many of the smaller stores are not far behind them. No wonder that freight rates are high; and it is evident that lumber prices must be good or shippers would be unable to pay the charges.

The demand in the United States for spruce boards, laths and scantling has been good, and there has been an occasional call for a cargo of deals. The chief difficulty has been to get bottoms, and the greater part of the lumber exported has been carried in American schooners from thirty to fifty years old. Some of these vessels which are now making good money were laid up before the war for lack of paying employment, and some that are now carrying lumber would not be considered fit to carry coal or gypsum or other heavy cargoes. Our own coasting schooners, which sometimes found it difficult to get remunerative charters, are now making money faster than they ever did before.

Handsome Spars from the West

A considerable quantity of hardwood lumber has been shipped by rail this season to Ontario cities, and some has found its way to the United States. The business has been fairly satisfactory, but must now close for a time, as the stock is practically all gone.

The spars brought from the Pacific Coast for vessels building along this shore and on the other side of Minas Basin are all landed at this port, from whence all not required here are forwarded to their destination by water. The spars made a handsome timber exhibit, for the lower masts ranged from eighty to ninety feet in length and were entirely free from knots. Nova Scotia spruce, while unexcelled for some purposes, cannot compete with the Douglas fir from the other side of the continent when it comes to material for ships spars or other long, knotless timbers. In former days it was not very difficult to get spars in our own forests for the biggest of our square-rigged vessels. Our trees were large enough for the biggest masts required, and the lower masts for our biggest square-riggers were not nearly as long as the ones that now have to be procured for our big schooners. Hence, notwithstanding the great cost of transportation, it is cheaper as well as easier to import spars than to find them and get them out here. The same rule evidently applies to other kinds of timber of which there is supposed to be no lack; for this season considerable quantities of long, square timbers of Douglas fir have been imported. It is said by those who should know that there is still an abundance of ship timber in the woods, and if this be so it is evident that timber has greatly appreciated in value, for some of the sticks now brought to the shipyards would at one time have been thought scarcely worth hauling home for fuel.

Several fine vessels have been launched along the shore this season, and several more are in varying stages of construction—some of them nearly complete. At Parrsboro a fine four-masted schooner of one thousand tons is almost ready for launching.

Suit Over Five Boilers Was Dismissed

Mr. Justice Rose, in the Non-Jury Court, held recently in Toronto, dismissed with costs the action by Burns and Roberts to recover \$1,500 damages from the Beaver Board Co., J. B. O'Brien, H. T. Teetsell, J. B. Miller, and W. G. Morrison, for loss of profit on the sale of five boilers and a smoke stack which they alleged they purchased from the Parry Sound Lumber Co., and arranged to sell to the Beaver Board Co. The lumber company, plaintiffs alleged, sold the boilers to the defendants after negotiations for their purchase and re-sale had been entered into.

How Canada's Pulp Lands Diminish?

At the recent newsprint inquiry in Ottawa, George H. Montgomery, counsel for the newsprint section of the Canadian Pulp and Paper Association, in urging the desirability of allowance being made in connection with the fixing of costs for the exhaustion of the timber limits, said that it had been established that one American newspaper alone is stripping fifteen square miles of Canadian territory annually without any profit to the country because of the low price received.

The Canadian publishers, in claiming that there should be no allowance for anything but stumpage dues, were not serving their own interests. The public, he said, have willingly borne the increased costs passed along by the newspapers, and they should recognize that for every dollar paid by them the country is getting ten dollars back in the form of export trade.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

For Sale-Lumber

FOR SALE—Twenty carloads Heavy White Oak Ship Timbers. Apply Georgian Bay Shipbuilding Co., Midland, Ont. 20-23

Hardwood and Softwood Slabs Wanted

4 ft. Hardwood and Softwood Slabs and bundled edgings. Cash. Apply Box 808, Canada Lumberman, Toronto, Ont. 21-24

Maple For Sale

60 M. ft. Maple, 1 1/4 in. x 3 1/2 in. x 18 in. up to 72 in. long; practically clear stock, 50 per cent. white maple; a good percentage quarter cut. For further particulars, apply Box 777, Canada Lumberman, Toronto, Ont. 19-t.f.

For Sale

Right to cut Pine and Birch on the following timber limits:—

Berth No. 4 McCraney, 11 1/4 sq. miles.

Berth No. 6 McCraney, 15 sq. miles.

For further particulars apply

BANK OF MONTREAL,

16-23 Hamilton, Ont.

FOR SALE

2 cars 1 x 4—8/16 M. R. Jack Pine and Spruce
1 car 1 x 6—8/16 M. R. Jack Pine and Spruce
1 car 1 x 8—8/16 M. R. Jack Pine and Spruce
1 car 1 x 10 & 12 M. R. Jack Pine and Spruce

STEAM ENGINES

for Immediate Shipment

ALL OF CANADIAN MANUFACTURE

Suitable for general mill work, power transmission by belt, rope drive or spur gearing, for driving woodworking, grind-
ing, or crushing machinery, or air com-
pressors in factories, saw mills, pulp and-
paper mills, ship yards, and munition
works.

2—600 horizontal cross compound, Corliss en-
gines, 18 and 34 x 42 in. cylinders, 100
r.p.m., crank shaft 18 in.

1—1200 h.p. cross compound Corliss engine,
cylinders 26 and 52 x 48 in., 85 r.p.m.,
crank shaft 22 in.

2—1200 cross compound Wheelock gridiron
valve engines, cylinders 27 and 52 x 46
in., 90 r.p.m., crank shafts 24 in.

1—250 h.p. Wheelock type, cross compound
type engine, cylinders 16 and 27 x 40 in.,
with belt flywheel, 16 1/2 ft. diam. and 33
in. face.

The engines now have electrical generators
mounted upon them which the present own-
er wishes to keep. Generators to be removed
from engine shafts and engines sold without
them.

These engines could be fitted with new fly-
wheel rims for belt driving, or with spur
gearing, making them available for any kind
of factory duty.

All of them have been operated at 135
pounds steam pressure and about 25 in. vac-
uum. All in good order, some of them have
been run recently.

Purchaser to make his own inspection, to
have access to all available records, and to
remove equipment at his own expense.

These engines ought to be sold entire, and
would be an advantageous purchase for any
establishment where reciprocating engine
power can be economically employed, espe-
cially where EXHAUST STEAM HAS COM-
MERCIAL VALUE, as it frequently has in
isolated power plants, or in operations requir-
ing drying kilns, or in mills that have to be
heated in the long Canadian winter.

The present owners will also consider sell-
ing various important component parts of
these engines, such as cylinders, flywheels and
frames, to any builders of heavy machinery
who find they can utilize or incorporate the
same into heavy machinery that might be
greatly needed by their customers, but whose
quick production at the present time is ren-
dered impossible by the shortage of labor and
material.

Correspondence is desired with parties who
may have immediate use for any or all of
these engines or parts thereof. Prices on ap-
plication, subject to prior sale.

Winnipeg Electric Railway Company,
21-21 Winnipeg, Man.

Review of Current Trade Conditions

Ontario and the East

It is difficult to describe accurately trade conditions at present, owing to many varying reports and disturbing factors. The export trade to the United States has fallen off considerably since the inauguration of the embargo, and while shipping permits are being received a little more freely than at the beginning of the month, there is still room for decided improvement. Some wholesalers declare that business is very satisfactory, while others are not so enthusiastic in their avowals, although they admit that the outlook is brightening. There have been many factors to upset trade during the past few weeks. The Liberty Loan campaign in the United States directed affairs from their regular channels and now the Victory bond campaign in Canada has a certain unsettling aspect. The wide prevalence of Spanish influenza has played havoc with a number of mills, who report that a large percentage of their employees have been down with the prevailing malady, which has also interfered with shipping to a certain extent and caused a shortage in box cars from the west. The worst is now over and it is hoped there will be no further setbacks in the way of transportation or the disorganizing of the labor ranks.

Reviewing market conditions generally a leading wholesaler remarked this week that there has been quite a reaction from the activities of the past two months which current opinion attributes to a variety of causes, such as the war situation and the prevalence of influenza. The possibility of an early peace has developed conservative tendencies among retail dealers generally, while the anticipated fall demand from the farmers has not been experienced by the lumber merchants. The recent embargo across the line, while serving to decrease shipments of local stocks, has not had any appreciable effect so far in lowering of prices.

There has been a cut of a couple of dollars on some sizes and grades of white pine, otherwise market quotations remain steady. It is interesting to note that in Western Ontario, representatives of Michigan mills have been offering No. 1 hemlock, 2 x 6 and 8, at a figure around thirty-three dollars, while there have been numerous inducements from American firms to Ontario wholesalers to buy stocks of white oak, gum and soft elm, the latter due principally to automobile manufacturers not using this timber in their work as many of the plants of motor car companies have been switching their facilities to the war department. It is said that the embargo does not apply to shipments from the United States into Canada, except on certain lines, and hence the Dominion presents a fruitful field. There is another reason, too, for the campaign to sell hardwood in the eastern provinces, and that is owing to the action of the War Industries Board at Washington putting restrictions on the manufacture of furniture, eliminating all new patterns for the duration of the war and curtailing active patterns fifty per cent.

There have been many representatives of Coast and Mountain mills in the East lately seeking an outlet for their boards and dimension timber. A recent despatch from the Coast says that at a meeting of the mill owners, a curtailment of twenty per cent. of the lumber output has been decided upon, owing to the decreased market by reason of the lumber embargo and a general falling off in business. The most of the mills have quite large stocks on hand and reduced output over a period at this time is preferable to closing down until the situation becomes relieved. The cutting of airplane spruce will be maintained as in the past and there will be no curtailment of the supply of lumber for ship construction.

As already mentioned, the Eastern Canadian trade is being sought by many B. C. mills, which, previous to the sharp falling off in demand from the prairie provinces, had never entered this field. One lumberman states it would appear that among the western manufacturers, those who have not been able to make a trip East have despatched stock sheets and prices galore. The shrewd retailer has been busy comparing prices so that when the average salesman calls around he is ready for a price argument, and while he has no intention of buying, he derives more or less satisfaction from a discussion on quotations with the man asking high prices.

The shingle market is quiet and there has been a drop of about 20 cents. Many of the B. C. shingle mills are operating only to part capacity, while others have closed down altogether. Those mills which have shut down will dispose of their surplus stock and wait for an improvement in the situation before starting up again. The labor shortage is reported to be improving in some districts, but most lumbering companies will not take out as much timber as last year,

owing to the high cost of wages and production, and the fact that the termination of the war being in sight, they do not care to take a chance with heavy stocks, not knowing what prices will prevail during the period of readjustment. They are pursuing a conservative policy, which is apparently the safest one in the present chaotic condition of world-wide affairs.

All southern pine and timbers up to 12 in. x 12 in. x 25 ft. can come in without a permit, as well as gum and cypress, but on all other stock and woods the embargo applies, according to latest advice.

United States

With the restrictions on building which have gone into effect, all lumber activities are now confined principally to government direct or indirect demand. The recent embargo has, and is still, affecting the situation, and it is promised at Washington that there will be more facility in issuing permits. It is said that the government will perfect its organization so that the thousands of requests which have been received will be more speedily acted upon. Leading trade journals are urging, in view of the likelihood of peace at any time that the industry should lay its plans accordingly. It is pointed out that the lumber business is now on a war basis, and cannot be altered to a peace footing overnight. It would be folly to delay action until peace is actually at hand. The "American Lumberman" takes a hopeful view of after-war conditions, and says whatever threatens other industries, the lumber manufacturer will enjoy a boom. When the European strife is over and restrictions removed, and lumber again moves more freely in the commercial markets, it will be met with a great domestic need for housing, repair work of all kinds, delayed municipal improvements, etc., and from abroad will come urgent calls for large quantities of materials adaptable for ready reconstruction of the devastated regions. The future holds much in store for the industry and it should realize immediately the necessity in times of war for times of peace. Consideration on this important matter should be delayed no longer.

In regard to hardwoods firmness generally characterizes the market: The present demand comes almost entirely, as in the past, from the Government or from sources manufacturing on its account. The demand from box factories and the railroads is particularly heavy, and some report a considerable volume of trade with furniture concerns. The slowing down effect of the recent embargo order and the restrictions on building have by this time been almost entirely overcome and manufacturers manifest a feeling that market conditions have been stimulated by the slowing down in shipments, which, for a time, were very heavy, for the reason that consumers are now better able to judge their present and future requirements more accurately and are placing business more freely. There is, however, an uneasiness in the trade caused by doubt as to the final classification by the Government of the various wood-consuming industries as essential or nonessential. Stocks generally have been reduced to an average of 11.8 percent. below normal, and production shows a decrease of an average of 26.5, more likely the result of the constantly growing labor shortage than of any lack of business. Yellow pine shipments during the past few days were about the same as the average for recent weeks and new orders held out to the records recently made. This does not mean that trade is active. It is far from that, and only the shortage of mill stocks due to curtailment holds the market prices at a fair level. Government business is not as large as it was, though ship material is moving freely. The embargo on shipments east of the Mississippi and north of the Ohio rivers without permits prevents the free movement of lumber to those sections, and the trade west and south of those streams is not of sufficient volume to engage the full capacity of the mills. Some of the smaller mills are offering material concessions in price, but this does not stimulate trade to any extent. The movement of cypress is also slow, but prices are better maintained.

Inland Empire manufacturers are fearful that their industry will be declared non-essential, and that their labor will be taken for more important work elsewhere. They are trying to get government work, but outside of aeroplane and box material they are not doing much business with the government. West coast mills are still filling many government orders, for ship and aeroplane material, but they are piling up a lot of common lumber, side cut, which is not moving freely. Prices for two-inch common are low, and the movement is light. Flat grain uppers and other thick stock is holding up better, and there is some demand. Only vertical grain uppers command full list. The

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. BOLE, Pres. F. H. GOFF, Vice-Pres. E. C. BARRE, Gen. Mgr. W. A. SAURWEIN, Ass't. Mgr.

shingle demand has dropped, and so have the prices. Many shingle mills are closing down for an indefinite period. The cutting off of the eastern market, and the natural decline in demand as winter approaches, will prevent much new business this fall.

Great Britain

Much interest is being aroused as to the quality of timber that will be needed, the available supply and the scale of prices that will prevail when the war ends. It is felt that peace is not a very long distance off, but even if it came to-morrow there is no doubt but that the present restrictions as applied to imports and exports and the rationing plan which has prevailed would continue in effect for some months or until such period as a fair measure of readjustment has been established.

A slight concession has been made by the Controller in an Order which is welcomed by retail distributors. Under a previously made regulation no more than £5 worth of goods during a current week could be sold to any one consumer without a permit. In future, however, power has been given to the retail distributor in the issued order to allow any purchaser to buy during a calendar month goods up to the value of £20.

While Service demands are all being practically supplied by the shipments that come forward from time to time, the limited calls that emanate from normal quarters are met, as far as is possible, by the remains of existing stocks. Many descriptions are entirely exhausted, while others are being slowly but steadily absorbed, their values appreciating as they diminish.

The official import list shows that practically no fresh supplies of hardwoods of any description are being landed at the present time. This cannot, however, be taken as correct, it being probable that the shipments coming forward to the order of the Controller are not included in these official papers.

The meeting of the demands for Service requirements, the indifferent call that is forthcoming from normal sources, and the keen demand that is made in all quarters for home-grown hardwoods, constitute the business that is passing at the present time. It is particularly active in regard to the latter woods, for as the stocks of the usual imported hardwoods fail, resource is more and more directed to the British woods, and a large and greatly extended field of consumption consequently develops. Supplies of most descriptions show no signs of failing, but the problem of transport as well as that of converting the woods under present conditions still continue to tax in a large degree the energies and resources of all who are engaged in the business.

The Coal Controller estimates that something like a million tons of firewood are available to supplement the coal supplies in the coming winter, and he is preparing proposals for cutting and gathering the wood, which is to be found mainly in those districts where the felling of home-grown timber has recently been carried out on an extensive scale. This fuel cannot, on account of difficulties of transport, be distributed throughout the country, but it will be offered to residents in the districts in which it is gathered conditionally on their agreeing to take it in certain proportions as a substitute for coal.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Conditions Show Improvement in Ottawa

A more hopeful outlook as to export sales and transportation conditions to the United States, prevailed in the Ottawa lumber market during the closing period of October. Everything of course was not just as lumbermen would like it, but the tone of all the underlying elements affecting market conditions, showed improvement.

As compared with the closing period of September and the first part of October, the indications were that the general state of affairs was growing better, and as time went on would continue to improve and, despite various restrictions, ultimately right itself.

Speculative future hazards, in the form of further embargoes, car shortages, labor scarcity, etc., still surrounded the lumbering trade.

In short, the former spirit of depression which in late September and early October seemed to permeate the trade, gradually began to slip away.

A general improvement in the foreign demand was noted, and while business with the United States was not what it used to be, it continued to pick up. There was no softening of prices. Permits for shipments to the United States became easier. Local and domestic trade did not show much change, and stocks remained pretty much the same as they were during the previous two weeks.

Lath and shingles remained very slow. The demand from the United States was not centred on any particular quality or grade running all the way from No. 1 to mill culls.

Some speculation existed as to whether or not spruce prices would drop. The general opinion of most lumbermen was that the price might have gone down a little in the eastern States, due to big consignments from the west having been dumped on the market, and the demand remaining slow or, in some cases, even below normal. Mr. P. C. Walker, of Shepard and Morse, expressed the view that the application of embargoes would tend to correct such a condition, and that given time the market under the license import system would readjust itself. Lumbermen generally agreed there was nothing to warrant a decline in the manufacturing price of spruce, and any drop that might take place, they affirmed, would only be of a temporary nature, due principally to the falling off of the demand.

In localities where the price of spruce is showing signs of weakening it was taken at Ottawa that the yards, wholesalers, or whoever was selling at the reputed cut rate was overstocked. Several leading lumbermen are skeptical if spruce sold at cut rate prices can be replaced even at the sale figure later on. Increased cost of camp supplies, shortage and general inferiority of woods labor all tend toward a lessened cut, and though the demand is not the same as in pre-war years, the question for the next year or eighteen months will be to get the stock, to meet whatever requisitions there are.

The cheerful tone of the war news for the past few weeks had its effect indirectly on the market. For instance, six weeks ago it

was rumoured and heard of in manufacturing circles that a new shell box order for the six inch box was to be let by the Imperial Munitions Board. It was supposed to come out about October 12th. It didn't come. The prospect of a quick termination or cessation of hostilities in Europe may have more or less to do with the holding back of further contracts for shell boxes. The Imperial Munitions Board in Canada acted chiefly on instructions and advice received from the head offices of the Board in England.

The prospect of a new shell box order is of course being looked forward to by the woodworking plants, but the delay in sending out the tenders naturally caused considerable doubt and apprehension to exist.

No wavering of opinion that the cut of the Ottawa Valley would be reduced this year, has been revealed. The labor situation got no better either with the mills or in the woods. In addition to other obstacles the outbreak of influenza added to the difficulty of the operators. Woodworking plants and mills in and around Ottawa had many employees laid down. Some of them died, and fear was generally expressed that the "plague" might secure a firmer hold in the woods. With Ottawa operators some woods have been practically immune from it, while other camps in adjoining territory had some men down with it.

Frank Hawkins, secretary of the Canadian Lumbermen's Association, was last week in receipt of a communication telling how the epidemic had spread into the Canadian West. The letter told how workers, even at the foothills of the Rockies, had gone down with the "Flu." Every day and hour that is lost in the woods, with the prevailing scarcity of labor, means so much reduced cut in this season's operations.

At the John R. Booth plant 150 cases, with five deaths, were reported. At the E. B. Eddy Company, 12 per cent. of the entire staff was down at the end of the week ending October 19th. There were five deaths. Two out of every three employees of the Bronson Company were effected. One death occurred to Oct. 22nd. Gordon Edwards reported a wide prevalence of influenza among the mill and camp workers of the W. C. Edwards Co. "Lumbermen are the same as any other persons, so far as influenza is concerned," said Mr. P. C. Walker, of Shepard and Morse. The camps of this company are not filled as great as in other years and so far have very fortunately escaped any serious consequences from the epidemic.

How St. John Trade Views Embargo

The embargo seems to demand more attention. All over the east timber shippers and manufacturers are tied up because of this restriction placed by the United States Government. No doubt this was a wise move inasfar as the measure itself is concerned, and will,

Klim is genuine—the flavor proves it—Drink It

Milk on the camp table means more than the satisfaction of your men. Milk is the best natural food and necessary. Its absence from the diet means a loss to the human system that can not be replaced by substituting any other food.

Having plenty of milk in camp is simply a matter of shipping in an adequate supply of Klim—pasteurized separated milk in powder form. In a jiffy your cook can whip Klim into water and set before the men genuine separated

milk with the unmistakable "real milk" flavor.

Klim is 100 per cent. body-building food. This means protein and sugar (it is over 50 per cent. milk sugar).

Klim, because it is a dry powder, weighs little, bulks small and is easy to ship. One ten pound tin means ten pounds of milk solids. It takes forty one pound tins of canned milk to give ten pounds of milk solids. It never sours or freezes. It can be used as needed. No waste.

Give Klim a trial and get your men's verdict.

in due time, work out to the mutual benefit, both to the shipper and purchasers.

While at the present moment few sales are being made to United States buyers unless for Government use, the yard stocks in New England will be gradually cleared of old stocks and when things adjust themselves they will be larger buyers. No market prices can be quoted to-day as there is no market. No shipments are taking place to United Kingdom ports, but it is hoped that when the winter port opens some space will be available to shippers and the stocks now accumulated at St. John will move out, even in small parcels, at prices which will bring a profit to the manufacturer. To-day no manufacturer can ship, and even if he could the prices are unprofitable.

Labor conditions for the woods are not improving and the outlook for a log, even at the past winter's prices is unlooked for. Men are asking \$60.00 to \$65.00 per month for the woods and few can be had even at these prices. Men offering are an inferior class and may be here to-day and to-morrow leaving the camps. Supplies are also high; therefore no logs will be produced in this section as cheap as a year ago, and the costs of last winter were the highest ever. Local conditions for building are not brisk, but general country trade is good and factories are busy. Douglas fir and pine finish products are advancing. All roofings and glass have also advanced during the past ten days.

Montreal Experiences Transportation Difficulties

Trade in Montreal is still on the slow side. The influenza epidemic has naturally been a disturbing factor, not only in the office and mill ends, but more particularly as regards transportation. The position has reached a point where the Railway Board has been compelled to take action, owing to the compulsory absence of railway men and laborers. Cars are delayed in consequence of there being insufficient labor to load and unload them, and the Board has reduced the movement of empty cars to the Maritime Provinces for loading lumber.

The movement of B. C. lumber to the east has also been retarded, owing to the epidemic, which has affected a considerable number of mill hands. Trade in B. C. stocks is dull, with the exception of timber, for which there is still a fair demand for shipbuilding purposes.

Some relief from the general situation may be expected if the Government responds to the request for the temporary lease of soldiers who were formerly in the railway service.

The embargo by the United States has resulted in an appreciable decline in the number of inquiries from across the border. Permits are by no means hard to secure, but they are only for immediate needs, and U. S. buyers are apparently not inclined to purchase anything except that absolutely required.

Men for camps are still difficult to obtain. Although it was publicly stated that the Government would exempt lumbermen in camps, in certain districts in the province the military police have been visiting the camps. In one case some men were taken, but were afterwards released.

Pulpwood is in moderate request, with shipments from the Lower Provinces backward. Prices keep firm.

Business in hardwoods for shipbuilding has been on a large scale, but it has now slackened off. The veneer market is satisfactory, the difficulty being to secure supplies from the U. S.

Will Construct Large Storage Dam

The Quebec Streams Commission has received tenders for the construction of a storage dam at the outlet of Lake Jacques Cartier Laurentide National Park, 60 miles north of Quebec. The dam is intended to conserve the water at low water periods, and will serve several mills on the Jacques Cartier River. The area of the lake is four square miles. The dam will be 310 ft. long, and 25 ft. high, above the bed of the river. It will be of the crib type, filled with stone, will rest on sand, and will be supported by wooden piles. To provide against the washing out of the bottom, a steel sheet piling core will be built, extending 35 feet below the bottom of the dam. A down-stream apron will be provided of such length as to nullify the pressure of the water. Two sluice gates, hand operated, and a log sluice will be installed. All the material will have to be hauled from Quebec.

Some 10,000 cords of wood have been cut in Algonquin Park for the Provincial Government to be used at the different provincial institutions, but it will not be shipped out till the snow comes, when it can be handled easier. A similar quantity has been cut by municipalities. Enquiries are still being made regarding the cutting of wood in the park.

The Early Bird Catches the Worm and hath a full crop

THERE is no doubt but that a serious shortage will be felt by the lumbering trade in securing supplies of woollen goods for their men owing to the enormous demands made by the various Allied Governments for the Siberian Expedition. We are still in a position to take care of your wants in the lines you have always looked to us to protect you for, but for how long we cannot say—so advise early placing of orders sufficiently large enough for several months to come.

To-day is none too soon.

Retail Lumberman Who Keeps on the Move

J. T. James, Bridgeburg, Ont.

"I believe it pays a lumber retailer to operate his own mill for his trade, providing his business is large enough. I make practically all my finished stock, but buy part of my sash and doors," said John T. James of Bridgeburg, Ont. He is identified with a number of enterprises and conducts the Crystal Beach Planing Mill, and lumber yard at Ridgeway to supply builders and contracts of his own, principally summer resort work at Crystal Beach. At Whitehall, Ont., Mr. James runs a general store, and at Bridgeburg he operates the 20th Century Lumber Yard and the 20th Century general store, names which have caught on and have been received with a large measure of favor. Mr. James formerly conducted a sawmill at Whitehall, but as it was too far from

his home to manage satisfactorily he sold the property some time ago. As stated, he runs a planing mill at Ridgeway and supplies his yard at Bridgeburg with stock taken over by motor truck. Mr. James owns 1,300 acres, partly timbered, in the Parry Sound district, and purchased his present planing mill in 1904. He has always kept a practical foreman in charge. While Mr. James' ventures are not on a large scale, they are varied, and in order to employ every minute of his spare time and help win the war, he is honorary treasurer of the Welland County branch of the Canadian Patriotic Fund, and also county chairman for the Navy League. He believes in keeping things on the move and is never idle.

Frequently he makes plans, etc., for jobs and carries out contracts if desired. In regard to deliveries the proprietor of the Crystal Beach Planing Mill at Ridgeway and the 20th Century Lumber Yard at Bridgeburg makes a special price to parties hauling away their own

purchases. Recently Mr. James received a carload of spruce which was billed from Whitney on the Canada Atlantic and reached Ridgeway within five days. The car was unloaded the next day and was ready for a return trip. This evidences promptness on the part of the railways and if all shipments were sent through with as much despatch and lumber contents unloaded by the consignee without delay there would be very little tie-up in transportation.

Forestry Coach Damaged in Collision

The Forestry Coach, a unique travelling exhibition of modern forest protective devices, prepared by the Canadian Forestry Association in Ottawa, was badly damaged in a collision at Springhill, N.S., on October 13th. One end of the coach was telescoped, but miraculously the contents of the car suffered very little injury. A model aeroplane of a very handsome design, and measuring nearly five feet between the wing tips, was badly smashed. The car had just completed its Nova Scotia and New Brunswick runs, and was headed for Quebec to enter the Lake St. John country. The exhibits were transferred to a new car at Moncton and the itinerary will be resumed just as soon as the influenza epidemic is lifted and public meetings in Quebec again become possible.

New Western Sawmill is Completed

The new sawmill of the Timberland Lumber Co. at South Westminster, B.C., is completed, and will start running before the end of the year. The mill itself is a well-built, two-storey structure, 52 feet wide by 280 feet long. The upper storey is the saw floor while the lower portion is the works floor. The lumber deck adjacent to the main building is also completed and is 100 feet wide by 350 feet long; heavy 12 x 12s are much in evidence throughout the whole structure.

The mill will have a cutting capacity of from 100,000 to 150,000 feet per day, the operating power will be steam, with a front engine of 350 h.p. and a back engine of 200 h.p. The entire area of the mill yards and site is sixty-six acres, a portion of which is taken up with houses for the employees. The mill has been built under the direction of Mr. Lewis Livingstone. The B. C. E. R. spur line into the mill site and yards is now in operation and the finished lumber will be shipped out over that line.

Increase Your Boiler Efficiency PLIBRICO is a plastic substance that makes a solid one-piece Lining without Joints by your own men for your Steam Boilers, Wood-Burners, Kilns, Dutch-Ovens, &c. Will outwear

Coast to Coast

STORMTIGHT Plastic and Liquid CEMENTS

Make a permanent, one-piece, leakless roof at the lowest possible cost. Always ready for use by anyone, regardless of weather conditions.

The simplest and cheapest method for sealing leaks and making repairs on any surface, including shingles. Apply now and forget your roofs until 1928.

Also for weatherproofing walls, floors, foundations.

LAPIDOLITH Concrete Hardener

Will make Concrete "Hard as Granite," so that floors will not develop holes that require patching.

Will also be Dustproof and Moistureproof.

All "Reliance" Chains are provided with a wide-wearing shoe on one side of the link.

Note also the double-keyed pin head to prevent the pin from turning.

F-4 (B. & F.)

"Reliance" Chain

With F-4 (or B. & F.) Attachments; the best thing for Saw Dust and Light Refuse Conveyers. Used also for Lumber Conveyers.

The Jeffrey Square Shank Pin Construction eliminates all rocking motion in the side bar.

Jeffrey Square Shank Pin Construction

The hard smooth steel pins with the square shanks fit into perfectly square holes. The bearing surface is the full width of the pin. We are the originators of this type of chain and have been building and improving it for 25 years.

F-2 Attachment

Jeffrey Detachable Chain

The type most generally used for Chain Drives. With F-2 Attachments to carry flights, Detachable Chains make good saw dust Conveyers.

"Reliance" Malleable Drag Chain

FOR SAW DUST AND REFUSE CONVEYERS

JEFFREY CHAINS

For Conveyer Service in Handling Logs, Lumber, Mill Refuse, Slabs, &c.

Not just chains, but chains that combine all the qualities and features demanded where greatest production or capacity is to be obtained.

Our 36 years of Chain building experience and knowledge of the Lumber Industry's needs makes the recommendations of Jeffrey Engineers valuable to you.

We ask the opportunity to prove our claims to you. Write for Catalog.

Dryden Company Building New Dam

The Dryden Pulp & Paper Co., Ltd., are the successors of the Dryden Timber & Power Co., Dryden, Ont., which has been operated by a Liquidator and Receiver for several years. Various improvements are being carried out to the plant with a view of securing increased efficiency, both as regards quality and quantity of output. Apart from the improvements, the Company have under construction a re-inforced concrete dam on the Eagle River, eighteen miles West of Dryden. This dam is being built to create a storage pond for logs. In connection therewith will be a Hydro-electric development, a pulpwood cutting-up plant, comprising a five-saw slash-er table and a pulpwood stacker for piling pulpwood blocks. A railway spur is being put in from the main line of the C.P.R. and the wood will be shipped to the Dryden mill as required. The latter is now placed in an advantageous position, with respect to pulpwood supply, through the new facilities afforded. The construction of the new dam will also make available several thousand horse power for future development on the Eagle River.

There is no change in the mill organization of the Dryden Pulp & Paper Co. J. B. Beveridge, who has been in charge for several years, continues as general manager and vice-president, while H. Humphreys is secretary-treasurer and F. N. Beveridge general superintendent. J. B. Beveridge reports that the Company have a large stock of pulpwood on hand and do not anticipate any difficulty in securing the balance of their requirements for the coming year, although there will naturally be some increase in price.

The capacity of the Dryden plant, owing to the improvements that are being effected, will be about sixty tons of kraft pulp per day, of which twenty tons will be converted into kraft wrapping and builders' sheathing paper.

Cost of Alligators Will Soon Increase

West, Peachey & Sons, manufacturers of alligator steam warping tugs, Simcoe, Ont., report that they have sold a number of alligators during the past season. There has been a disposition on the part of some lumber concerns to get along without new equipment and wait for more settled conditions. The price of materials has advanced considerably and boilers and cables now cost nearly four times pre war figures. The firm, however, report that they have so far, through having heavy stocks of all other material, been able to

keep the price down to net increases on boilers, cables and labor, but these stocks are dwindling fast and the figure for alligators will soon have to advance as there is no prospect of boiler plate, etc., being easier for some time.

In regard to the personnel of the organization, caused by the death a few months ago of John C. West, the inventor of the alligator, his son, Chas. T. West, has become a member of the firm. The late John C. West and Jas. Peachey each took a son into partnership five years ago, and the name was changed to West, Peachey & Sons, and, as already stated, following the demise of John C. West, another son has joined the firm.

Canadian Lumberjacks Win Sporting Events

Novel features were introduced when forestry troops from Canada, Australia, New Zealand and Great Britain held an athletic and field day "somewhere in France." There were 17 companies represented, 12 of whom were from one district group of the Canadian Forestry Corps. There were contests in cross-cut sawing, log loading, tree felling and log rolling, on land and in water. The Canadians won four of these five contests.

In the cross-cut sawing two experienced lumberjacks, who formerly worked in the neighborhood of the Ottawa River, finished the job in thirty seconds. The second and third prizes were won by men from two other Canadian companies. Speed and neatness were the qualifications required in the log loading. Three Canadian units were winners, the first doing the job in five minutes, twenty seconds.

A French-Canadian won the log rolling in water easily. He was an experienced river driver from lower Quebec, for he quickly put most of his opponents off the logs into the water. The second prize winner was a British Columbian. Three Canadians won the log-rolling on land.

The director of timber operations in France gave a cup to the company winning the most points during the day. This cup went to No. 2 Canadian company, with nineteen. A private in No. 26 company, Canadian Forestry Corps, won the gold medal donated by the A.D.C.S., Canadian detached forces. Two men in these same companies made an equal number of points in the athletic events and technical contests, and so the British army forestry officer who offered a cup for the man making the best aggregate, agreed to give each of the two men a cup.

Giant Worm Drive Truck

The truck you can rely upon. The result of thought, time and expenditure to produce the best. The GIANT truck is designed to meet the demands of your business efficiently at a minimum cost.

USE KEROSENE

The DUNTLEY Hydro-Pneumatic Gas Generator is an exclusive feature of Giant Motor Trucks. With this device the Giant Truck may be operated on kerosene or gasoline, at a saving in fuel cost of over 50 per cent., with a total absence of carbon smoke or odor.

Let us demonstrate its value to you.

EDGINGS

Ontario

An addition has been completed to the office of Seaman, Kent & Co., 263 Wallace Ave., Toronto.

The charge against Z. Mageau, M.P.P. for the district of Sturgeon Falls, for employing men contrary to the provisions of the Military Service Act, was dismissed.

A charter has been granted to the C. & J. Hadley Company, of Chatham, Ont., with a capital stock of fifty thousand dollars, to deal in lumber, timber, builders' supplies, etc.

The Northern Bolt, Screw and Wire Company of Owen Sound are erecting a two-storey factory for the making of boxes and barrels. Their structure is 110 x 40 ft.

The Brockville House Building Co., of Brockville, Ont., has been formed to solve the housing problem by erecting homes for working men, which will be sold on easy and economical terms. Contracts have been let for eleven near cottages, one of which has been disposed of while yet in the foundation-laying stage.

The Dryden Pulp & Paper Company, Ltd., have been incorporated with head office at Dryden, Ont., and capital stock of \$1,000,000 to carry on business as lumbermen, dealers in timber, lumber, timber limits, concessions, timber lands, and pulpwood lands, and to manage, conduct and operate pulp and paper mills, etc.

Word has reached Toronto from overseas to the effect that for some time past directing authorities of the Canadian Forestry Corps have been inundated with applications from officers and men of the forestry service to transfer from the corps in order to have a hand in the fighting. The pressure has been so great that it has been decided to allow a certain number of transfer.

Roy C. Skene, who had offices in the Ryrie Building, Toronto, and was the owner of the Muskoka Cordwood and Lumber Co., which recently made an assignment, was taken into custody recently. According to the authorities, fully one hundred people who had ordered cordwood from the company, but had not received their deliveries. While the bulk of the complainants had paid first instalments on their order, there were others who had paid in full. The modus operandi of the company was to send agents around to people urging them, owing to the shortage of coal, to secure wood at \$13.50 a cord. The deliveries were guaranteed before or during September, but, by Skene's own admission, only \$2,500 worth of the wood had been delivered. The company claim to own a section of bushland at Southwood, Ont.

Eastern Canada

Thomas E. Fee, lumber merchant, Montreal, P.Q., has been registered.

The Harricana Lumber Mills Co. Ltd., Quebec, P.Q., have obtained a charter.

L. H. Cantin & Co., lumber merchants, 260 Greene Ave., Montreal, are erecting a two-storey storage shed and office.

The Halifax Relief Commission are erecting a number of houses on Hennessy Field. The houses are two storeys, 20 x 26, and of frame construction.

The McClarry Mfg. Company, 23 Wellington St. West, Montreal, are adding a one-storey addition to their warehouse at a cost of \$16,000. Considerable repairs are also being made to the premises.

With a capital stock of \$20,000, Fred T. Smith, Ltd., has been incorporated to take over as a going concern the business carried on by Fred T. Smith, lumber merchant, Board of Trade, Montreal. Payment is to be made in paid-up stock of the company.

The sash and door and box factory of Traversy, Limited, Papineau Avenue, Montreal, has been destroyed by fire. The firm has carried out contracts for boxes for the Imperial Munitions Board. Two employees and a fireman were injured. The loss was about \$100,000, and the company will rebuild at once.

The Quebec Streams Commission have received tenders for the construction of a storage dam at the outlet of Lake Jacques Cartier, 60 miles north of Quebec. The dam will conserve water at low water periods and will be of benefit to the Donnacona Paper Co. and some lumber mills on the Jacques Cartier River. The dam will be provided with a stop log sluice.

The net profits of the St. Maurice Paper Co., Three Rivers, P.Q., for 1917, totalled \$1,060,853, after expenses of manufacturing and administration. Deducting \$386,955 for exhaustion of timber area, also depreciation of plant and taxes, a balance of \$673,900 remains. Bond interest absorbs \$78,750, the net surplus thus being \$595,150. In addition to the paper mill, the company owns a lumber and pulpwood mills at Three Rivers, Montcalm, and St. Gabriel de Brandon.

G. & J. Esplin, Limited, have been incorporated with a capital stock of \$400,000 and headquarters in Montreal, to carry on the business of lumbering and the timber trade in all its branches, and manufacture, sell and deal in logs, timber, ties, posts, poles, etc., as well as to own timber lands and licenses. The new company is empowered to take over as a going concern the business and property carried on in Montreal and elsewhere by Mrs. George Esplin under the style of G. & J. Esplin.

A federal charter has been granted to the New Brunswick Sulphate Fibre Co., Limited, of Montreal, with a share capital of six hundred thousand dollars. The new organization is empowered to manufacture and deal in pulp, pulp wood, paper, logs, lumber and timber and other products or by-products of wood, and to acquire as a going concern the plant and assets of the New Brunswick Sulphate Fibre Co. of Millerton, N.B., which company was incorporated in 1912 with a capital of two hundred thousand dollars. The

incorporators of the new concern are C. Howard Smith, Wm. D. Robb, Harold Crabtree, Wm. D. Hutchins and John J. Meagher, all of Montreal.

News was received in Quebec recently of the death of James J. Feore, formerly of that city, who passed away in New York, being a victim of an attack of the Spanish influenza. The late Mr. Feore was about fifty years of age and some thirty years ago left Quebec and went south. He located in Mobile, Ala., and began investing in sailing vessels. Like all of his business enterprises he met with remarkable success, and at the time of his death was a millionaire owner of one of the largest fleets of steam and sailing ships trading to all parts of the world from American ports. Mr. Feore always paid an annual visit to his old home in Quebec, where he had many friends.

Stanley Douglass will erect a new saw mill on the site of the one burned down some time ago at Stanley, York County, N.B. Mr. Douglas recently bought the mill property of C. M. Sherwood of Centreville, which will be dismantled and the machinery removed to Stanley, to be placed in the new structure. The cutting capacity will be about twenty thousand feet a day, and the power will be water with an auxiliary of steam, the engine and boiler now being on the ground. The power plant secured from the Centreville mill has been disposed of to Roy Scott, who will erect a saw mill at Cross Creek. Mr. Douglas already has two crews in the woods, and will cut about four and a half million feet of timber this season. Of this amount three million will be for his own mill at Stanley, and the remainder for the Nashwaak Pulp and Paper Co., at St. John, N.B.

Western Canada

The Caledonia Box and Mfg. Co. of Winnipeg are erecting an addition to their factory.

The Valley Lumber Co. of Minnedosa, Man., intend erecting new buildings and enlarging their plant.

The B. C. Lumber Co. of Vancouver, are completing a wharf and new buildings at Masset Inlet, Graham Island, B.C.

The Port Moody Shingle Mill at Port Moody, B.C., was visited by a small fire last month. The damage has been repaired.

An office and some dressed lumber were recently burned in a fire which took place at the Leslie Lumber Co., Steveston, B.C.

The sawmill of the Edgewood Lumber Co. located at Castlegar, B.C., was completely destroyed by fire recently. The planing mill and yards were saved.

The Eburne Sawmills, Limited, have had plans for a new sawmill at Point Grey, B.C. The main building will be 40 x 240 ft., the planing department 42 x 76, and boiler house, 32 x 34.

The Hartford Lumber Company Ltd., has been incorporated with head office at Cranberry Lake, B.C., and capital stock of \$10,000, to carry on business as manufacturers of lumber, timber, shingles, pulp and paper, etc.

The Otter Logging Company Ltd., has been incorporated with head office at Victoria, B.C., and capital stock of \$10,000, to carry on business as loggers, lumber and timber merchants, sawmill and shingle mill proprietors, etc.

The Devoy Shingle Mill has been moved from the Whatcom road corner, Huntingdon, B.C., where the cedar from the Indian reservation has been cut up. Mr. Devoy took the plant down to Sullivan, where he will cut railroad ties.

The Ruby Creek Land and Log Company Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as timber merchants, lumbermen, loggers, sawmill and shingle mill proprietors, etc.

The finishing touches have been put to the standard drying kilns for the Thurston-Flavelle Lumber Company, at Port Moody, B.C., by the Taylor Engineering Works. Additions have been made to the wharf, including the lumber stacker.

Operations are now in progress for the erection of a wireless station at Buckley Bay for the convenience of the lumber mills up there. The towers will be 200 feet high, and the new station will work with Digby Island or with the station recently erected at Thurston Harbor.

The B. C. Wood Turners Ltd., has been incorporated with head office at Vancouver, B.C., and capital stock of \$10,000, to carry on business as loggers, lumber, shingle, sash and door, and general manufacturers in all its branches, and to operate and own sawmills, shingle mills, lumber mills, etc.

Fire lately destroyed a portion of the piles of the Rainbow Lumber Co., who operate near the American border, ten miles east of Gateway, B.C. The company ran their mill during the first part of the season, and have been shipping stock to Eastern Canadian markets. The mill escaped injury.

Sealed tenders are being received by the Minister of Lands for B. C., until November 15, 1918, for the purchase of License X264, to cut 1,101,000 feet of fir, cedar and hemlock on an area situated on Deer Lake, Loughborough Inlet, Range 1, Coast District. Two years will be allowed for the removal of the timber.

The South Vancouver Shingle Company Ltd., has been incorporated with head office at Vancouver, B.C., and a capital stock of \$10,000, to acquire and take over the logging camps, assets, and business of the Riverside Shingle Company, and to carry on a general lumber and manufacturing business of lumber, shingle, timber, etc.

The Prince Albert Lumber Company, which employs 500 people in the mill at Prince Albert, has decided to suspend operations for a year owing to the abnormal conditions consequent upon the war and crops on the prairies, where a large part of the mill output was marketed. Operations at Big River also carried on by the company, will be reduced 50 per cent.

Considerable damage was done by fire recently at Powell River to the sawmill and planing mill of the Powell River Pulp and Paper Company. The plant was valued at \$40,000, and heavy loss was caused in both buildings and machinery. With difficulty the fire was prevented from spreading to nearby property. The mills will be reconstructed without delay.

A new sawmill, which will have a capacity of about 15,000 feet a day, is being built in Surrey near the junction of the Scott and Peck roads. It will be operated by Messrs. Lawrence and Rherin, of Port Moody, who have bought a large quantity of small timber in that vicinity, sufficient to operate the mill for a number of years. The mill will be electrically driven, power being taken from the B. C. E. P. power line.

"By-Pass" Blower Systems for green saw dust and wet stringy material

Material that usually clogs the ordinary Blower is handled easily and continuously by our "By-Pass" Blowers. No material passes through or around the fan. That is the big secret of "By-Pass" success. Slow speed and minimum power are other strong features. Write for literature and all details.

We manufacture and install complete systems

Economical Car Moving

Read the following suggestion by the editor of the
 "Mississippi Valley Lumberman"
 SPOTTING FREIGHT CARS BY POWER

A very handy arrangement for spotting or moving freight cars short distances along a siding, when the siding is near the mill, consists of a wire cable running over and around pulleys to a drum which may be located in the mill or wherever convenient, and driven either by belt or electric motor. While this idea is in use in some few plants, there are many more in which, if it were used, it would effect a big saving in labor and time.

Railroad switching crews are not always on hand when most needed, nor do the railways spot cars just where you want them, and even where they do, it is frequently necessary to shift the cars along from time to time during the day as they are loaded or unloaded, whichever the case may be. The power cable is a convenient and economical solution of the problem. With it there is no necessity for calling out several workmen to laboriously push and "pinchbar" the car along by inches.—Mississippi Valley Lumberman.

Saving Both
Men
and Money

This is the

BELT DRIVEN MACHINE

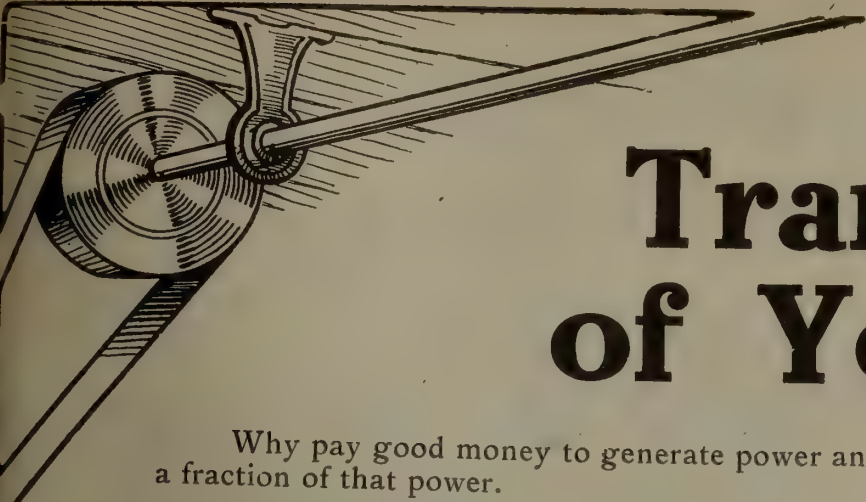

referred to in this clipping.
 We also make the Electric Driven Drum referred to.
 We make either machine in 7 sizes, from 10 to 50 Horse Power, and with any diameter Drum up to 48 inches at the bottom of flanges. The size of the drum governs the speed at which the car moves.

We also make either machine with one drum, or with two, three or four drums, as required.

We also make these drums with compound gearing, especially designed for moving a number of loaded cars either up a grade or on a level.

Belleville Ontario

Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated. Goodhue Belts stretch 15% to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of
Chapman Double Ball Bearings

— IN —

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

You pay for Chapman bearings whether you buy them or not

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

"Brazel Patent" SNOW PLOWS

Known in every
Camp from the
Atlantic to the
Pacific as the
most satisfac-
tory Snow Plow
made.

Combination
Model, Lumber-
man's Snow
Plow, can be
used either with
or without Rut
Cutter.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or as desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll up and push entirely away from the road. 12 inches of loose snow each time the plow passes over.

A Specially Not a Side Line
BAND RESAWS

NEW Standard
54-in. Band Resaw

Mount Olive, N. C.,
June 10, 1918.

Gentlemen—We have been using your New Standard 54-Inch Band Resaw continuously in our planing mill for about a year and it is absolutely satisfactory in every respect.

We use it largely for work that is to be exact, such as resawing double, thin ceiling, etc. We are frank to state that were we in the market for a resaw again we would give you an order for a duplicate of it.

Yours truly,
Enterprise Lumber Co.

Wm. B. Mershon & Company
Saginaw, Michigan

Ring Oiling

WHY
Bond Hangers
Eliminate
Hot Bearings

Are you considering the purchase of Hangers for your new factory?

Perhaps you do not realize the necessity of buying hangers that will eliminate hot bearings, or the trouble they will cause in a hanger? If a bearing happened to become hot in a hanger holding six or more machines, and they all stand idle while the shop mechanic fools around trying to fix it, you'd soon realize what inefficiency and expense this is.

The Ring-oiling device on Bond Hangers supplies a constant flow of lubricant on the full surface of the shaft and bearings, which keeps them cool when running at high speed.

Get our catalog containing full details before you buy.

Canadian Bond Hanger & Coupling Co.
LIMITED
ALEXANDRIA, ONTARIO

Size	Fuel Consumed
B.H.P.	at Full Load
12 1/2	3/4 gals. oil

BURNOIL ENGINES

Operate Perfectly on Cheap Fuel Oils

No carburetor, batteries or magneto.
No preheating, blow torch or hot surface.

Simple, economical, sturdy. This engine can be run indefinitely at slow speed and then immediately speeded up to maximum power. Just the type needed for continuous towing, rafting and general manouvering. Starts instantly.

ADJUSTABLE SAFETY CAR-STAKE EQUIPMENT

(SCHMITZ PATENT)

Mr. Logger, Attention !

We have the ONLY device that removes ALL danger and difficulty in moving your logs from camp to mill on cars, trucks or sleighs.

No balks, break-downs or dislocation of parts—IT WORKS ALWAYS. Though still new, it is thoroughly tried and tested, and gives perfect satisfaction to all who use it. Nothing like it for speeding up production and reducing expenses.

It will save you TEN times its cost in wages, renewal of stakes, avoidance of accidents, and vexatious delays.

If you don't use stakes on your cars, you CAN use them with this equipment; you need it on your cars right now, and you will WANT it as soon as you find out what it will do for you.

Send for illustrated Circular, with testimonials, and let us convince you of the truth of these claims. Address

Continued on Page 68)

A Double Service Belt

The side of SparOak next the pulley is Spartan leather, giving the maximum grip on the pulley.

The outer part of SparOak is firm, heavy selected, special oak tanned center stock.

Most good belts are built so as to have either fine pulley-gripping surface and less ruggedness, or plenty of ruggedness and less traction.

SparOak, one of Graton & Knight Standardized Series Leather Belts, is a unique belt because it has super-gripping power and the firmness that resists the mauling of hard usage.

The side of SparOak next to the pulley is Graton & Knight Spartan—the belting leather with the highest co-efficient of friction ever attained in any belting material; the outside is the finest quality of Graton & Knight special oak tanned, extra firm center stock. Combined they form a belt of absolutely unique quality.

SparOak Belting

SparOak stands high Speeds without slipping or burning. It stays flat under strain. The punching of shifters and rapping of pulley flanges affect SparOak surprisingly little. SparOak belts in actual use carry their traction power up to speeds of more than a mile a minute.

If you have a vexatious belting problem, tell us about it and let us tell you whether or not SparOak is the belt required. There are thousands of cantankerous drives in the United States that will lose much of their crankiness when operated by SparOak. If you have such a one, it is well worth your while to write us about it.

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

11TH YEAR

"There Are No Service Stations Out Here. That's One Reason We Bought the Duplex"

Large numbers of Duplex 4-Wheel Drive Trucks are used for heavy hauling in cities.

But probably more are used in remote sections around mines, in oil fields and through stretches of timber lands.

And because they are selected for the most difficult haulage work, Duplex Trucks *must be rugged.*

They must be able to operate under conditions that many times prohibit the use of other type of truck.

Because Duplex Trucks are designed for out-of-the-ordinary service—in winter as well as summer—they are surely capable of giving *greater* satisfaction for *all* service.

DUPLEX TRUCK COMPANY
2062 Washington Ave. Lansing, Mich.

*With tire mileage greater—
And fuel consumption less—
Duplex cost per ton-mile is always lower.*

DUPLEX

STEAM FEEDS

Our Direct Acting Feeds are built in any desired size

This mark on your saw-mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

We have a 10" x 42ft Feed in stock for IMMEDIATE SHIPMENT

The above illustration gives a good general idea of our direct acting, or shot gun, steam feed, which we build in the following sizes: 8 in., 10 in., 11 in., 12 in. and 14 in. bore, or in any desired size.

The cylinders are made in 6 ft. sections, and are bored to exact diameter. The flanges on cylinders are faced perfectly true, and finished to templets, so that each section is interchangeable. The flanges are also turned on the outside, which is a great convenience for levelling or lining the feed when placing same in mill.

The front cylinder head is our improved pattern.

The piston rod is made from double thickness, seamless steel tubing, of extra large diameter.

Our Illustrated catalogue contains full details. A copy will be sent you on request.

EDGERS

Waterous New Champion Edgers

are built with 40", 48", 56", 60", and 72" opening. They carry as many as four movable and two stationary saws without difficulty.

These edgers cut true and to dimension at all times. The guides are rigid and cannot shift in the cut. They are crowded to correct position and held immovably in place by a steel setting gauge that drops upon them. No other edger has this feature.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 85c per lb.; West of Fort William, 88c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

Pulpwood, 246,282 cords.

Railway Ties, 5,704,459.

Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.

For maps and full information regarding Ontario, apply to

HON. G. HOWARD FERGUSON,

Minister of Lands, Forests and Mines.

AN ADVERTISEMENT

By the
UNION LUMBER COMPANY, Limited

QUALITY and SERVICE

Since May First Nineteen Hundred Eleven when we received our Charter to operate a lumber business, we have been fortunate in controlling the output of sawmills producing a most desirable quality of White Pine.

Lumber that is well manufactured, properly graded and piled openly with plenty of air space on good pile bottoms resulting in dry, bright lumber.

We have competent and careful inspectors who make it their personal concern to see that all orders are filled exactly as required.

Stocks are complete now at the end of the sawing season, and we are in a position to fill your orders for

White Pine
Red Pine
Jack Pine
Spruce and
Lath.

and Guarantee Entire Satisfaction.

Experts predict that whether or not the war comes to an end this Fall transportation facilities will be taxed to the limit. Vast quantities of supplies of all kinds must move for domestic use and for the use of our troops abroad. There is every likelihood that lumber will have to take a back seat unless especially required in the present emergency.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

Three Steps in Roofing

SHINGLES

—The ideal material for roofing—Provides a perfect three-ply covering—Gives a solid roof surface capable of withstanding shock without injury—A natural non-conductor, assuring warmth in winter and coolness in summer—Neat and artistic in appearance—The best known type of roof in Canada, has met all-comers for years and still leads the procession.

RED CEDAR SHINGLES

- made from that wood which—above all others—is best suited for exposure to weather.
- saturated with natural oils which give it decay-resisting powers even under extreme conditions.
- extremely light but of such a natural texture as to defy alike all climatic and weather conditions.

BRITISH COLUMBIA RED CEDAR SHINGLES

—The highest standard of durability, protection and economy

known in the roofing world.

- Made of British Columbia red cedar—from the Pacific Coast, where the trees attain a perfection as nowhere else in the world—forest giants—hundreds of years old.
- Manufactured and packed according to grading rules which guarantee the highest standard on the market—Vertical grain—Strictly clear—Free from sap.
- Sold under a Trade Mark which assures the highest quality—enables you to offer your customer the best—most durable—most economical roofing material in the world.

TRADE MARK

PROCTOR QUESTIONNAIRE

If you will answer these questions we will study your conditions and attend to your needs promptly:

- (1) How are you now drying your veneer or other material?
- (2) How many square feet are you drying per hour?
- (3) How many square feet would you like to dry per hour?
- (4) What is the thickness?
- (5) What kind of wood?
- (6) Rotary cut, sliced or sawed?
- (7) What troubles do you have, if any?
- (8) What is the present drying temperature?
- (9) Are you crowded for space?
- (10) How is the material handled to and from the dryer?
- (11) How many men are you employing in drying?
- (12) What kind of steam are you using, and how much?
- (13) Does material run in large lots of one kind or in small lots?
- (14) How much power are you using for drying?

Should you in turn wish to ask questions about Proctor's Dryers, we will gladly answer them. Make a questionnaire for us and we will fill in the answers and mail the blank back to you by return mail if possible.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

The Part Lumbermen Must Play in the Days of Peace

The morn of peace has dawned at last and Canadians are experiencing for the first time in a long period rapture that is for the moment care-free and full orb'd. The long pent-up suspense of the people has found expression in joyous demonstration and national merry-making. These are the only outward and visible forms which typify the same confidence, trust and hope that has prevailed in the great struggle for honor, liberty and justice.

With the cessation of the combat many problems present themselves for solution and adjustment. While there will not be a great loss of life and the daily narrative of bloodshed, pillage and sacrifice is over, there are perplexing and ponderous propositions to be dealt with in the coming months. There is no fear but that if rightly considered and co-operatively undertaken they will be carried out to as successful and satisfactory a conclusion as has been the achievement of the Empire and its Allies. Leaders in all lines are uniting and now that the sacrifices are over it is doubly imperative for men to sink their differences and join in adjusting the industrial, economic and commercial problems that will face Canada for many months to come. The progress of things getting back to normal will necessarily be slow and perhaps disappointing, just as the day of Victory and Peace seemed at times a long way off. In the darkest hours it appeared as if a ray of sunshine would never break. Those who had firm faith and courage, who did not lose the mastery of self and their grip on things in general foresaw the glorious conclusion.

In a similar sense, because orders in a certain line of business fall off for a while, the market becomes depressed for a short period and many are out of employment for a few weeks or months, it is not to be concluded that the bottom has dropped out of everything or that the sun has ceased to shine. These temporary irritations are a part of the price that we must pay, and are small and insignificant in comparison to the sacrifices made by half a million Canadians who bore

the brunt of arms in order that civilization and freedom might be preserved to the world.

While the hour is pregnant with tremendous issues, there is no reason to doubt that with patience, wisdom and forbearance and the exercise of mutual concessions everything will not work out for the good and welfare of each and all. All the higher principles of achievement, all the worth-while accomplishments of the centuries have been won at the cost of much human blood and treasure, great self-sacrifice and denial. Looking back over the past, in view of what the Allies have endured during the war there is no doubt but that in the years to come, much as all suffered and sorrowed between August 3rd, 1914, and November 11th, 1918, Canadians and those of every other land will say it was worth the price if true democracy and national truth and righteousness are forever established. In the meantime confidence is largely the basis of business expansion and permanence. The lumberman must play his part in the realignment of the world's affairs. He is big and broad enough to do it on this occasion as he has on many others in the history of Canada and "will not break faith."

* * *

Effect of War Upon Great Allied Industry Reviewed

In all lines of trade men are reviewing the effects of the past four years of war and taking a survey of the future. With the cessation of hostilities in Europe the question is being asked concerning nearly every industry; will it develop and expand or will it go through a long, trying period of turmoil, falling values, lack of expansion or general stagnation? It is always interesting and instructive to survey the future. The present we know and can gauge more or less accurately, but the speculative is full of promise, hope and expectation. In the realm of every-day affairs there is no feature of the things around us that creates more interest and lively concern than what is going to happen, what will be the outcome, what about the future and how can the days to come be regarded from every standpoint? Much of the opinion may be theoretical, visionary and imaginative, but these are the things by which men and institutions go on accomplishing greater objects and more outstanding records. Without hope, without dreaming dreams, without a mental portrait gallery, and trusting some day to see the realization of all, there would, in the dull, drab business world, be little to animate or inspire, to arouse enthusiasm or incite action and effort.

Confidence and trust, stability and foresight must be exercised today as never before. Conditions and circumstances that are likely to affect the general lumber situation during the period of reconstruction and readjustment are referred to at considerable length on another page of this issue of the "Canada Lumberman." An industry closely allied to the timber trade is pulp and paper, which is one of the great basic and rapidly expanding activities of the Dominion. There are many big organizations in the lumber line which manufacture pulp and paper and numerous pulp and paper concerns which operate large sawmills and carry on extensive woods operations. With the interests of the lumbering and paper arena, so closely interwoven, it is illuminating to read what F. J. Campbell, President of the Canadian Pulp and Paper Association, has to say regarding the effect of war upon the pulp and paper business. In a recent interview he touches upon the factors which have been a detriment to the trade during the past few years and casts a horoscope on the future. Speaking of the former, he says: The war factors which may be said to have had a detrimental effect upon the industry include, first and foremost, government regulation. While government regulation has been applied particularly to the control of newsprint paper it has had a deleterious effect upon the entire industry, retarding its normal development to an appreciable extent, compelling the manufacturers to submit to heavy losses in their domestic market and affecting unfavorably their foreign trade. Moreover, government control of the industry, both in the United States and in Canada, has undertaken to curtail consumption of some of the industry's products and to place artificial and arbitrary restrictions upon their free use. These conditions, it is assumed, will disappear with the war and the industry

will be left once more to make its war untrammelled. It cannot be denied, however, that the industry would be in a much stronger position to face the problems of the reconstruction period had it not been subjected to these restrictions and limitations during one of the most critical periods of its history. Nor will the industry achieve anything like the full growth and importance to the country, until such government regulation is withdrawn, which for the benefit of all concerned should be done speedily.

Other handicaps imposed by the war, such as tremendous increases in the cost of raw materials and machinery, scarcity of competent labor and its abnormally high price when obtainable, excessive freight rates, shortage of fuel, difficulties in obtaining necessary shipping facilities, and increased taxes, are all part of the common disabilities which the war has imposed upon business of every kind and from none of which the pulp and paper industry has been exempt. Doubtless, with the return of peace will come a readjustment of many of these conditions, if not immediately, then gradually, and the industry, like all others, will share in whatever benefits or hardships such readjustments may serve to bring about.

Speaking broadly, however, Mr. Campbell adds that it may be said that Canada's pulp and paper manufacturers face the future with entire confidence and with considerably less trepidation than that with which they formerly faced unknown problems of war time. Despite its numerous difficulties it must be admitted that the industry is in a stronger position than it was in the times immediately preceding the war.

The Gift of Prophecy Finding Full Scope in All Spheres

While most men will solemnly proclaim that they are "neither prophets nor the sons of prophets," it will be found that the great bulk of them will, under perhaps slightly different disguise than that of open prediction, venture opinions which cause them, when subsequent events turn out their way, to join the anvil chorus of "I told you so," "I knew that would be the outcome"; "The result is no surprise to me," or "I felt along that things would eventuate just as they have."

It is an interesting phase of human nature that we all like to peer into the future and most of us are not averse to assuming the role of local oracle or seer, especially when we discover others who coincide with our views or give a tacit consent that we are right in our conjecture or deductions. It is all very flattering and self satisfying, for nearly all humans like to be well spoken of and looked upon as beings possessing a little more shrewdness than the ordinary rank and file. True, one may carry his predictions, opinions, assertions, prejudices or beliefs to such a point as to make him cranky, irritable or egotistical. These persons possibly some under the head of fanatics, bigots, skeptics or Philistines.

On the whole, everybody, who is not too prejudiced, biased or narrow minded, likes a little of the unseen revealed and this is the reason why speculation always arouses so much interest. This phase of human nature is evidenced on the present occasion by the number of opinions being voiced on all sides with respect to what will happen to prices, the market, the demand and the general trade situation in lumber as well as other commodities now that the great war is over. Nowhere else is such a theme so universally discussed.

In 1901, the Duke of York (now the present King George the Fifth), who has won such admiration and love from his subjects by his energy, broadmindedness, devotion to duty and democratic spirit, paid a visit of several weeks' duration to Canada, and was accorded a rapturous welcome in every city and town. He took a trip across the continent during the early fall months and on his return to Montreal, a witty paragrapher in one of the newspapers of the Canadian metropolis, penned something like this: "The Duke of York has returned to Montreal. He is entitled to special distinction by reason of the fact that so far as we are able to learn, he is the only gentleman coming back from the great West during the past few weeks who has not made an estimate of the prairie wheat crop." Everyone had

been furnishing the press with figures except His Royal Highness.

Possibly a shortcut to fame during the present period of anxiety and strain is to refrain from indulging in augury or speculation on what will happen after the war in the lumber arena, but the current of human nature is so strong that the flood of prophecy cannot be stemmed, even if the Good Book says, "Take no thought of the morrow." Unlike war and pestilence, prophecy does not kill and during the present anxious period we cannot perhaps have too much of it regarding post-bellum conditions.

Some Editorial Short Lengths

A leading firm of brokers, who have given much attention to economic questions in Victory Loan advertising, declare that not only the greatest bargain the world had ever seen is a Victory bond, but predict that it will in the future advance considerably in value. The basis of reason is the following, which, in view of the general discussion taking place on industrial and economic conditions generally in the days of peace, will be read with some thought and attention. For the last few years the prices of food, clothing, fuel and everything else we must buy to sustain life have gone up enormously. Articles which cost us \$100 in 1899, cost \$136 in 1914, while this year the same articles cost us no less than \$245. In other words, a dollar saved in 1899 was worth less than 50 cents this year by reason of its diminished purchasing power. Prices of food and clothing have about reached the limit. With the ending of the war and the return of millions of soldiers to productive channels prices are certain to fall, and the purchasing power of the dollar will consequently increase. Prof. S. A. Cudmore, of Toronto University, counting on a fall in commodities, figures that goods which now cost \$245, will, in two years cost only \$160—that goods which now cost \$1.00 will then cost only a fraction over 65 cents.

* * *

"Lumber after the war will be material of construction of first necessity in France and Belgium," according to a letter received by the Southern Pine Association, from a contracting and architectural firm in Brussels. "But we believe lumber will be a very high price after the war," continues the letter. "We must add that it is lumber which has had the least increase in price, bricks, cement, concrete, steel, etc., being much higher." A number of French and Belgian firms are writing the association with regard to the availability of southern pine for construction purposes in these countries when peace has been restored, indicating that there is considerable interest in lumber markets expected to develop in connection with the rebuilding of the war-devastated sections of Europe. Herein is a pointer for the Canadian lumbermen and associations to get busy.

* * *

Bread made from wood is the latest thing, according to Dr. John W. Beckman, a member of the California section of the American Chemical Society. He declares that the search for new materials to feed the starving stomachs of Sweden has demonstrated that necessity is the mother of invention. A Swedish chemist has devised a method by which spruce wood flour can be produced in such a condition that it can be used in bread baking. In fact, according to Dr. Beckman, bread baked out of two-thirds wheat or other flour, and one-third spruce flour is a healthy, well-tasting and digestible food. Extensive experiments have been carried out to learn the digestibility of this spruce flour or cellulose flour, and all of them have proven that fully one-third of the cellulose flour is absorbed by the human being. The manufacture of this product is now under way in Sweden in sufficient quantities to supply the needs of Stockholm. It is being sold at the price of about 40c per pound, but the volume of this flour is about three times that of wheat.

* * *

A modification of the lumber embargo which will be gratefully received by wholesalers has been made. Under the new ruling it is permissible for consignees in making requests for permits under the forest products embargo to leave vacant the name of the shipper or the point of shipment, where such information is not available, and forward to the shipper or dealer for completion.

Trend of Trade and Values in Lumber Arena

The Man Who Predicts Protracted Periods of Depression or Reconstruction has Nothing Substantial on Which to Base His Judgment

The situation in which lumbermen in Canada find themselves to-day, from an industrial, financial and economic point of view, is one of the most frequently discussed subjects in all lumber offices. It is quite out of the question to formulate problems which this situation involves, or to utter any conclusions which will be accepted by all lumbermen as a satisfactory description of the conditions which prevail to-day, to say nothing of attempting to give a clear outline of conditions which may be expected to develop. The role of a prophet to-day is impossible. Even the role of the student of prevailing industrial and economic conditions is exceptionally difficult. It is next to impossible to reach any valuable working conclusions based upon facts which will be accepted by everyone.

Under such conditions the "Canada Lumberman" cannot venture to furnish any complete analysis of the trade situation to-day, or to discuss the outlook with any assurance that what it may say will be accepted as infallible fact. We know, before setting out upon any consideration of this subject, that what we have to say will be accepted, or not accepted, largely according to the personal convictions of the individual reader. At the same time, this subject has been discussed so much during the last few months and particularly during the last week or two that we feel it to be something in the nature of a duty to attempt some sort of a digest of the views which are being expressed by different members of the trade, and particularly by those of the wholesale trade, who undoubtedly are best situated for understanding the general direction of the currents which combine to form the general industrial and economic movement.

Roughly speaking, the wholesale lumbermen to-day are of two schools of thought. There are those who fear that the outlook is dark and that the end of the war will mean the beginning of a long period of depression. On the other hand there are those who, while agreeing that lower prices may prevail after the war, are confident that such a state of affairs will be of short duration and that subsequently the lumber trade—probably near the van of the whole industrial procession will move forward into a period of good times, which will improve rapidly, once confidence has become general, and will prevail over a period of considerable duration, throughout which the lumber industry will enjoy exceptionally satisfactory trade conditions.

Early Return to Good Conditions.

Which of these lines of thought is it most reasonable to accept and follow? Conditions are such that it is scarcely logical to follow a middle course. Every lumberman would be glad to see prevail the situation which includes a comparatively early return to good trade conditions. The question, therefore, resolves itself into one of whether there is justification for this point of view.

The situation to-day is not difficult to outline so far as the facts are concerned. It is characterized chiefly by small quantities of stocks, resulting from abnormally low production for several years past, together with heavy consumption for various war purposes. There are exceptions to this situation, for instance, the surplus of stocks now existing in the mountain district of British Columbia, caused by the failure of the customary demand from the prairies to develop during the present year. This, however, is more or less of a local matter and is expected to work out its own solution in a comparatively short period of time. The other chief feature of the present situation is the high level of prices as compared with those of pre-war days. The importance of this feature is reduced by the fact that, as contrasted with the prices of other articles, the prices of lumber to-day are low. There never was a time when a thousand feet of lumber could be exchanged in the market for so small a quantity of other goods, or when the farmer could exchange the product of his farm for such a large quantity of lumber, shingles or lath. While this may be thought to be in the nature of a side issue it has a very direct bearing upon the situation, for the fact that lumber is not high in price comparatively speaking,

will have a stabilizing effect when the period of readjustment arrives, following the conclusion of peace.

Immediately after the conclusion of peace we may expect the commencement of an alteration of the lumber trade from abnormally large orders for war business, to small and moderately large orders for general industrial uses and for general building purposes. One of the important developments will then be the return of good trade conditions for the retailer. For meeting the requirements of this readjustment period the conditions through which the trade has passed during the last three years have created a favorable situation of low stocks and well adjusted credits.

Rapid Recovery After Previous Wars.

Bearing in mind the considerations and conditions which have been discussed, how far can we go in a discussion of the trade outlook? The majority of opinion on the part of those who are giving the matter close thought is that there is sound justification for confidence. There is, first of all, the fundamental fact that the destruction of property caused by the war, and the postponement of industrial expansion and home building, must create a great demand for building material. There remains only one question to be answered. How long will it take for the public to establish general industrial confidence and put the pendulum of trade on the return swing towards normal prosperity?

This question cannot be answered to-day. It is one of those great uncertainties which time alone can remove, but we can reasonably attempt to weigh the pros and cons and seek to form some kind of a reasonable basis for the guidance of our business conduct. The most formidable fact is the great extent of the destruction that will have to be repaired. Surely this can be counted upon to be a compelling influence toward a rapid return to industrial activity on a great scale. It is important, in this connection, to recall in a general way, the conditions which prevailed in the United States after the civil war. While the cases are not in any way similar, one having been a very small and comparatively local matter in comparison with the other, yet it should be remembered that the world in general believed that the United States were bankrupt at the end of the Civil War. Only a few years elapsed before the United States were on the crest of a wave of prosperity such as had never been known in the history of any other nation. The recovery of the French nation after the Franco-Prussian war is an illustration of the same thing. One cannot argue from these precedents and reach a conclusion that will apply to present conditions, but it is reasonable to feel that these events of the past afford ground for believing that the man who predicts a protracted period of depression, or even of readjustment, after the present war, has not learned the lessons of history.

There are many side issues, the consideration of which would require more space than this article can use. Nearly all of them, however, are of a nature that, even if they have the effect of adding to the factors in favor of trade depression, have other features which can just as logically be expected to offset these. An example is the great number of men who will be thrown out of employment by the readjustment and whose numbers will be added to by the return of the men from the front. The redeeming feature in this connection is the certainty that all the requirements of these men for their daily life under civilian conditions will quickly come into play.

That there is not good ground for being pessimistic regarding the outlook is being declared by many close students of the situation. It is, nevertheless, the duty of lumbermen to sit tight and to do everything they can to encourage confidence. Those who tell one another that prices are already sagging and that the bottom will soon fall out of the market, would have themselves to thank if just such a state of affairs should develop. The cue to follow to-day is that of common-sense. The retailer in particular has his part to play. He may think that from his own individual point of view he will be benefited by an extensive drop in prices, whereas, if he considers the matter thoroughly, such an event is the last thing in the world he should desire. A depressed market will not bring him trade. It is in the interest of the retailer to act closely in unison with all others who seek to maintain market stability, so that trade may move comfortably forward from the present situation into that state of normal prosperity which is absolutely certain to come within a reasonable time after the end of the war.

Timber Activities in the Ontario Clay Belt

What Canadian Northern is Doing in the Development of Ontario Hinterland—Busy Mills at Foleyet and Lively Building Plans at Divisional Points

By the recent purchase of the Federal Government of the Canadian Northern Railway System much attention has been directed to this great national highway. Within the last few years the C. N. R. has opened up many hundreds of miles of new country, launched many industrial activities and brought many unknown and hitherto unexplored sections of Canada's banner province under cultivation and settlement.

At Foleyet, where the line running east and south practically leaves the clay belt section, there has been launched the first of a series of sawmill and woodworking plants which will in time adopt that well wooded territory, the resources of which were a decade ago unrevealed and undeveloped. The man or institution which rises to great heights must possess vision and confidence, and with these two admirable qualities the C. N. R. has inaugurated undertakings on a scale which proclaims faith in the future of the great clay belt of Ontario and the wealth of this comparative hinterland. In two years much has been accomplished and is but an index of what is likely to follow for like the current of a mighty river the industrial movement in the north will gather strength as it flows and the stream of prosperity will constantly widen.

If there are any doubts on this score, the visitor should take a trip to Foleyet, which is a divisional point on the main line between Sudbury and Port Arthur, and see what has been accomplished during the past two years. The Eastern Lands Department of the C. N. R. has pioneered the way, not only in lumbering and pulpwood operations, but also in agricultural development. Much is being done along sound farming lines, but that is another story, it is rather with the great undertakings in the lumber, timber and pulpwood arena that the "Canada Lumberman" prefers to speak. The story of woods operations, log driving and manufacturing processes is an interesting one and considering that less than two years ago the virgin forests stood where now is a prosperous and wide awake town. The change within such a short period is almost incredible.

Floating the Lumber to the Saws.

After being floated down the Opishkanogama, the Muskego and the Midway rivers, the timber cut in the townships of Foleyet and Ivanhoe enters the sorting gap a few hundred yards south of the mill. There is ample water for floating the logs as the streams while not wide, are deep. Foleyet is beyond the height of land and all the water runs to the north in the James Bay direction. The sawmill and pulpwood mill are located just west of the new town, which has sprung up in the last two years. It is true that being a divisional point on the line which was completed some six years ago and a transcontinental freight and passenger service put in operation, there were a few houses for the railway employees erected north of the track, but it is only during the past two years, since lumbering operations were commenced under the Eastern Lands Department of the C. N. R., that Foleyet has become the busy center that it is to-day, with churches, schools, well equipped boarding houses, private dwellings and several well stocked stores. The Midway river flows into the Muskego some distance north east of the town, its source being Ivanhoe lake, and just south of Foleyet the combined stream unites with the Opishkanogama. The Eastern Lands Department will operate ten camps this winter along these streams at Mileage Two and other points. For driving the company runs two steam tugs, two gasoline boats, etc.

The Busy Rossing Plant.

At the sorting gap there are four pockets. The axe made ties are floated down the stream and sent to a dam at the track, where by means of a tie loading machine they are placed on cars. The ties are used on the C. N. R. system from Sudbury to Winnipeg and practically all the supply is furnished by the Eastern Lands Department. The output of mill made and axe made ties this year will be some 600,000 and next season if the adequate amount of labor can be obtained the output will be nearly doubled. In the second gap there is floated all the logs used for the mill in both lumber and ties, the principal timber being jackpine with a fair sprinkling of white pine and spruce. The third gap is used for jackpine logs for the rossing plant and the fourth for spruce logs. The quantities rossed of spruce and jackpine are about equally divided. All the rossed wood is loaded on cars and sent to Thorold and other points south; thus cars carrying coal and other supplies to the northern divisional points and yards are assured of a

return cargo. The company not only makes a profit on its pulpwood operations, but also on the carrying which averages about five dollars per cord on rossed wood. The capacity of the rossing plant is about 125 cords per day. The most of the lumber sawn at the mill, which has a capacity of 70,000 feet a day including 50,000 feet of sawn ties, is used for the erection of houses for the employees of the C. N. R. at northern divisional points. Some sixty houses are being erected at Capreol and several at Hornpayne. But to return to the rossing plant. This and the sawmill were built during the winter of 1916-17 and operations conducted for the first time last year. This season the industrial activities of the company have been greatly extended and a shingle, lath and planing mill department added, as well as a twin slabber saw installed in the mill for cutting jackpine ties of 5, 6 and 7 inch face.

Undertakings are Extended in Character.

The woods and timber undertakings of the company are now most complete and comprehensive, embracing a sawmill, rossing plant, shingle lath and planing mill. 25,000 shingles, 40,000 lath and 1,500 sawn ties are produced daily, and one hundred hands are engaged in the mill and yards, while over double this number find work in cutting and driving ends of the business. The superintendent of the mill is Mr. Thomas Harrison, who has had a wide insight and experience in the lumbering arena and for some years was with Hon. Geo. Gordon, at Cache Bay.

The pulp logs are elevated to the rossing plant, which is 30 x 80 feet and built of planed match siding with corrugated steel roof, by means a jack ladder, sixteen feet wide and in their ascension are automatically counted. They then enter the slasher, which was installed by the Waterous Company of Brantford. The slasher has nine circular saws and the sixteen foot logs, after being cut up into two foot lengths, are carried by a trough conveyor to the immense barking drum, installed by the American Barking Drum Company of Chicago. This huge cylindrical affair is 10 feet in diameter and 30 feet long and revolves by means of four carrier chains. The interior surface of channel iron causes the two foot sticks to be barked or rossed as the wood is carried around the drum and by the rapid revolution is forced out automatically at the other end, each stick remaining in the drum for possibly ten minutes. The wood which is not barked sufficiently is drawn off by men with "pikes" and drops on to a conveyor which carries it back to the other end of the drum through which it again passes. The trimmer ends of the pulp wood logs after passing over the slasher are conveyed by a carrier to a chute and there dumped into a chopper and taken out in the yard for filling in purposes. The bark on the logs is forced through the openings on the side of the drum and by means of corrugated plates on the outside is swept into a trough conveyor and goes to a chute to be taken away for filling in. The rossed wood is dumped on to a pulpwood stacker and carried by means of an endless chain out on the huge structure which is located east of the mill and is 400 feet long and 60 feet high. The stacker is a double deck one, provided with fourteen chutes, and the wood may be dumped in huge piles or direct into the waiting cars. The endless cable is reversible in that it can travel either way and carry the wood along either to the upper or lower level.

Wood Dumped Into Waiting Cars.

On the latter the wood is sent down the chutes to the waiting box or gondola cars, tracks being on either side. The cars are run in under the covered shed and the side is built up of spruce logs. Men can work in comfort with this protection in all kinds of weather. By means of a loading device track and engine pulpwood can be loaded from the huge piles on either side of the conveyor direct on to cars.

The sawmill is 42 x 140 feet, covered on both sides and roof with corrugated steel and like the rossing plant is electrically lighted throughout. The mill also supplies the town, boarding houses and streets with electric current for illumination. The mill is run by steam and there are three Goldie & McCulloch tubular boilers, each of 6 feet diameter and 18 feet length, with 150 pounds steam pressure. The smoke stack is of 7 feet diameter and 110 feet high and the top is reached by an iron ladder leading up to the walk at the summit. There are three engines, one of 250 h. p. for running the sawmill, another of 80 h. p. for operating the rossing plant, and a third of 40 h.p. for producing electric light. The larger engine is a Grant, Giddings and Lewis, and the others are of Waterous build. All the

shafting, pulleys, belts, etc., of the mill are in the basement. The boilers are fed from Dutch ovens and from the "hog" which chops up all the refuse from sawmill and slasher not suitable for lath or faggots, and conveys the pulverized material by means of a conveyor to the furnaces of the boilers. In connection with the sawmill there is a well equipped woodworking shop for the making of sleighs, wagons and general repairs, and also a machine shop equipped with two forges, power drill, lathe, etc. There is also a pumping house near by for pumping water from the river for use in the barking drum and for fire protection throughout the buildings.

The Equipment of the Sawmill.

The mill has a yard engine and three or four miles of tracks throughout the piling grounds. After ascending the jack ladder there is a double set of steam kickers. Logs which are suitable for ties are kicked off the ladder at the left and carried by means of a trough conveyor to the twin slabbers, which were supplied by the A. R. Williams Machinery Company, of Toronto. There are about 1,000 ties sawed daily in the mill. The ties after leaving the slabbers are transported by live rolls to the tie trimmer, while the slabs are carried to the slasher and after emerging on the conveyor are sorted out. The pieces that are suitable for lath or faggots go to the lath department and the refuse is carried down to the "hog" for feeding

into box cars, being shipped subsequently to many points and sold for fire wood.

Under the sorting shed is the planing mill, which possesses a McGregor-Gourlay Company rip saw, and a planer and matcher supplied by the Berlin Machine Works, of Beloit, Wis. There is a large black board at one end of the mill whereon is shown each month the output of the different departments.

The company have built many comfortable houses for the foremen and skilled workmen, at Foleyet and there is a large boarding house where excellent meals are served. The company do not board the men themselves, but make suitable arrangements for their keep with an organization catering particularly in this line. The "boys" sleep during the summer season in large waterproof tents, which are boarded up at the side a distance of several feet. Each tent is electrically lighted and heated with stoves. Each man has a single steel bed, mattress and springs. In the wash house is running water and adjacent is a building which contains the shower and tub baths, while a heater is provided for boiling clothes, so that on the ground of sanitation, comfort and convenience, nothing is left neglected. The operations of the mills and timber and pulpwood cutting provide employment for the settlers and a market for their supplies.

The company provide a resident doctor for looking after the health of the men in the camps and woods, a moving picture theatre

Lath making department at Foleyet, showing bolter

General view of the mill and part of sorting shed

Glimpse of the gigantic pile of crossed pulpwood

furnaces of the boilers. The ties themselves, after leaving the tie trimmer table are sent along on live rolls to the waiting cars.

In the sawmill the equipment consists of 9 inch steam feed carriage, a circular saw with steam kickers, loaders and nigger, installed by the Waterous Company. The slabs are disposed of in the same manner as those coming from the twin slabbers. Small logs, cants and boards are transferred to a Morey double edger or "bull" edger as the machine is frequently termed. At one side is a gang of ten saws each of 26 inches diameter, and capable of cutting 8 inches. The other half of the double edger is used for edging the boards coming from the circular saw. Passing on, the lumber is conveyed by live rolls and transfers to the trimmers in the sorting shed, which is 40 x 50 feet, and located at the north end of the mill. The trimmer ends fall into a trough conveyor and are transported to a hopper from which they are taken by carts out in the yard and used to extend the piling grounds. The lumber from the sorting shed is piled on to loaders which automatically deposit the load on high cars for hauling out to the yards.

The Shingle and Lath Department.

Logs suitable for making shingles are sent along on live rolls to a butting saw at the east end of the mill, where they are cut up into sixteen inch shingle blocks and conveyed to the basement. The blocks are placed in a "Clipper" shingle machine, supplied by the E. Long Mfg. Company, and from that to the saw jointer. The shingles are then sorted and packed.

It should be mentioned, that all slabs after going on to the slash table, supplied by the Waterous Company, and fully equipped with six saws, are cut into four foot lengths and are then dropped into a trough conveyor. The wood suitable for lath and faggots, which are used in C. N. R. round houses for starting locomotive fires, is taken to a Payette lath bolter, having four saws, and afterwards transferred to a Payette lath machine from which the pieces fall onto a wide sorting belt, are then graded and bundled and conveyed on to the lath trimming table, and so on to the cars. The other pieces not suitable for lath are conveyed on a carrier to a chute and then dumped directly

for their entertainment at nights, while there is a debating society, which meets weekly and gives, in the town hall, attractive musical and literary evenings, admission being free to all. There is a telephone system owned and operated by the company, while the town has schools, churches, a good hotel and other conveniences that contribute to the happiness and contentment of the residents of Foleyet, which is located 425 miles north west of Toronto, or 158 miles beyond Sudbury, at an altitude of 1,078 feet, while that of Toronto is 254 feet and Sudbury 850 feet.

Last winter contracting camps were operated and 400,000 axe made ties taken out along with 6,000,000 feet of tie and lumber logs, principally jackpine. This season the company, under the Eastern Lands Department, at the head of which is Mr. Cyril T. Young, are operating their own camps and considerably more timber will be taken out than last season. It is interesting to note that the main business thoroughfare of the town is called Young Street, being named in honor of Mr. Young, who spends a large portion of his time at Foleyet, supervising the numerous activities. He also has charge of colonization and mining in the Eastern Lands Department, and enjoys the confidence and co-operation of those associated with him. That the big enterprises at Foleyet have been carried out so rapidly and extensively reflects something of the energy, industry and organizing and executive ability of the manager, who has been ably supported by a competent staff.

The directors of the Riordon Pulp & Paper Company, Limited, Montreal, announce that it is their intention to make a new issue of bonds to the extent of \$3,000,000. Subject to the approval of the shareholders, they have made tentative arrangements with the Minister of Finance for the sale of these bonds. Permission has also been obtained from the Capital Issues Committee at Washington for the sale of the securities in the United States. The funds obtained from the sale of these bonds are for investment in the Kipawa Fibre Company Limited, which is to be managed jointly with the Riordon concern. The Kipawa Company will manufacture bleached sulphite pulp at a mill which is being erected at Temiskaming, Que.

Winnipeg Wholesalers in Forefront

New Organization has Entered Upon its Second Year
with Every Promise of Increasing Usefulness

An aggressive and alert organization is the Wholesale Lumber Dealers Association of Winnipeg. Its membership is enthusiastic and a fine spirit of harmony and unity prevails in the ranks of this young guild. It was formed in August, 1917, with nearly all the mill representatives, wholesalers and commission men as members. The aims and purposes, it was distinctly pointed out, are the furtherance of the welfare of the lumber industry in general and to bring together those connected with the distribution of the products of the forests for their mutual benefit and pleasure. It was laid down that any firm or corporation with a regular appointed and permanent office in Winnipeg, engaged in the sale and distribution of lumber from the manufacturer to the retailer was eligible for membership. From that modest beginning the organization has grown until to-day it occupies a permanent home at 517 McIntyre Block. The new quarters are under the direction of C. S. Macdonell, sales secretary. The system used in connection with the clearing house plan which has been inaugurated, is for members to make their wants known to the secretary, who immediately puts them in touch with any other member who has a stock to sell. The stock is listed for information of any members interested and it is felt that this branch of the service will be of great benefit in creating an outlet for certain lines of lumber which perhaps may for one cause or another stick and hang.

The Winnipeg Wholesale Lumber Dealers Association is affiliated with the Winnipeg Board of Trade and is in close touch with wholesale lumber associations throughout Canada and the United States. The present officers are wide awake, enthusiastic men, who foresee in connection with the association a splendid future and an institution of worth, convenience and stability to the industry at large. The association is proving a distinct benefit, not only to those who belong to it, but also to the mills they represent, the customers they serve and the trade generally. It will tend to correct several misconceptions and abuses which may have existed in the minds of a few, that the traveller and the commission man are like a fifth wheel on a coach and that the wholesaler is a sort of a barnacle, a necessary evil or red tape barrier in connection with the manufacture, sale and distribution of lumber.

In these columns it has from time to time been pointed out that both the wholesaler and the traveller fill a legitimate, useful, economic, important and indispensable niche, and any association which helps to drive home this truth cannot fail to be of much advantage and stability to the lumber industry. The present officers of the association, some of whose portraits appear in this issue, are president, E. C. Carter; vice-president, A. F. McDonald, secretary-treasurer, J. A. Rowland; directors, W. B. Tomlinson, F. J. Chapman, G. W. Bacon, H. E. Deneen, R. Westcott and W. H. Hoover, Jr. Among the objects which this ardent association hope to carry out are:

"Establishment of inspectors at other points on the prairies besides Calgary to inspect claims as regards grades as soon as same are reported, so that these matters will be immediately adjusted on their merits, without either the mill or the customer being dealt unfairly with.

"Establishment for up-to-the-minute credit information as collected by members. It is felt they know the risks better than the ordinary mercantile agency which does not specialize on lumber accounts. It is intended that this information shall be available for manufacturers.

"To inaugurate short educational talks at each association meeting by some recognized expert on the matter under discussion."

A complete reference library is in the course of formation, which will contain all books of grading rules in use in Western Canada, and trades papers of interest to members.

The Winnipeg Wholesale Lumber Dealers Association have moved into their new quarters in the McIntyre Block, on Main Street, and on the door there is a sign "Welcome Brother Lumberman."

Modifications in Railway Switching Service

The Railway Board, in a judgment handed down recently at Ottawa, modifies a previous general order in regard to the general railway switching service along lines suggested by the Winnipeg and Windsor Boards of Trade and the Canadian Manufacturers' Association. The amended order changed the inter-switching practise in that it compelled railway companies to give interswitching, instead of extending it at certain points as a matter of grace. It was provided, among other things, that the railway on which traffic originated is entitled to the long haul. The Shippers' Section of the Winnipeg Board of Trade objected to this on the score that it would deprive shippers of the valuable right they had always enjoyed of routing their cars along the line they desired to use.

It was urged that the enforcement of the order would effect a radical change upon the whole service of freight in car lots and would involve the removal of the only competition now remaining to shippers—competition in service.

The new judgment gives effect to the protests of the Manufacturers' Association and the Boards of Trade, and permits a team track shipper to allow his shipment to be interswitched to a carrier other than the initial carrier.

Fire Starts Just When Insurance Was Put On

The interesting point of fire insurance law as to whether a covering note issued by an insurance broker during the course of an afternoon is retroactive to noon of the day of issuance, is to be fought out in the Supreme Court of British Columbia. The writ in the action was filed recently by Messrs. Farris and Emerson, acting on behalf of the Pearson Shingle Mill Co., who are suing a number of fire underwriters for \$5000.

The story is an interesting one. At about 4 o'clock in the afternoon of May 14 a representative of the plaintiff company took out a policy with the local agents of the defendants, covering the company's mill on Burrard Inlet. The usual covering note was given to protect the insured until the arrival of the policy.

Later on it transpired that a fire broke out in the mill at about the very hour of the afternoon that the policy was being taken out and the covering note given. The fire did very extensive damage to the mill.

The plaintiffs contend that under the usual rule of law the covering note protecting the insured from May 14 on, must be taken to mean from the hour of noon on that day, which would be three or four hours before the fire broke out. The defendant companies have disputed payment on the ground that it is not proven that fire had not started before the moment when the covering note was given. There is not the slightest suggestion of fraud in the transaction, the outbreak of fire at the mill at about the moment the company was negotiating for the insurance policy being admittedly a coincidence which gives rise to an interesting point of law.

Pleased With The Output of Spruce

Hon. T. D. Pattullo, minister of lands for the province of British Columbia, who was in Ottawa lately, expressed during the course of an interview, his enthusiasm of the part the far western province had played in supply of spruce for aeroplanes.

It is doubly gratifying that not only has British Columbia contributed a larger per capita quota of men for the fighting line than any other province in the Dominion, but she is also sending over the finest spruce in the world for the production of aeroplanes, that has proved such a big factor in the war."

Mr. Pattullo's department played an important part in this connection, taking every step possible to increase the production of spruce of the finest quality. The owners of spruce areas and the Imperial authorities could not some time ago come to terms as to spruce timber and the Minister of Lands for B. C. promptly took measures so that all spruce timber in the province would be available for aeroplane production and war purposes. The effect of the orders was instantaneous and since that time, under the direction of Major Taylor of the Imperial Munitions Board the amount of spruce now constantly going to the front is forty times as great as the amount going forward on January 1st this year.

Reports Decided Shortage in Woods Labor

John Carew, M.P.P., of Lindsay, who is at the head of the John Carew Lumber Co., Limited, reports that there is a pronounced scarcity of woods labor in his section of Ontario. He owns limits in Harvey and Cavendish townships, Peterborough county, and is at present operating two camps, but hopes to be able to secure sufficient help to add two more. He will take out about seven million feet of logs, principally spruce and hemlock. His cut last season was only four million feet, owing to the shortage of labor, which to-day is commanding sixty-five dollars a month and board, the latter having increased one hundred per cent. since the war broke out. In the winter of 1913-14 the average pay in the camps was about forty dollars and board. Owing to the slump, during the next season, the wage scale went down to twenty dollars, and now the figure is over three times this sum.

Mr. Carew's eldest son, Col. Frank J. Carew, who has been overseas with the Canadian Forestry corps since June, 1916, has under his direction six or seven saw mills in France, cutting large quantities of timber for the troops. Another son, Pte. Arthur W. Carew, left recently for England with the C. O. T. C., and is now attached to the Imperial Artillery.

Aggressive Members of Wholesale Lumber Dealers Association of Winnipeg

Top row, (left to right) E. C. Carter, President; A. F. McDonald (Sandy) Vice-President; J. A. Rowland, Secretary-Treasurer.

Middle row, R. Westcott, Director; W. H. Hoover, Jr., Director; G. W. Bacon, Director.

Bottom row, H. E. Deneen, Director; W. P. Dutton, Past Sec.-Treas.; F. J. Chapman, Director.

Breezy Notes From Maritime Provinces

The prevailing epidemic of Spanish influenza is creating havoc in the lumber camps on the Tobique N. B. A report was sent to Hon. W. F. Roberts, minister of health, giving details of the ravages of the disease, and in consequence he secured Rev. W. R. Robinson to go to the stricken district. He was given an ample supply of medicine and is working under the supervision of the Health Department.

J. S. Granner, of the Imperial Munitions Board of Ottawa, was in the province of New Brunswick recently. He said there were three million feet of lumber stored in St. John awaiting shipment overseas during the coming winter port season. He explained that all lumber going overseas from the Dominion had to be shipped as part of the general cargo owing to the scarcity of ships and the large demand for foodstuffs. Mr. Granner also stated that there are large quantities of aeroplane lumber being sent overseas. As soon as the season at Montreal closes shipping will be started through St. John.

Enquiries by a representative of the "Canada Lumberman," along the north shore of New Brunswick and in northern Maine elicited the fact that many of the big operators there do not intend to cut more than half their usual quantity of logs this season. This is said to be due to the greatly increased cost of operations. The men's wages will be higher, the cost of provisions more and the price of working material greater than in former years. Other lumber operators in New Brunswick intend to get a full cut out despite the increased cost. Some of the operators consider that it will cost from \$4 to \$6 a thousand more to get their timber out this season than it did last.

Hon. E. A. Smith, minister of lands and mines in New Brunswick, recently announced that five rangers were to be appointed, having passed the required examinations. Progress toward a complete organization of the outside service of this department is being made. Members of the department anticipate a marked curtailment in the cut on both crown and private lands this season.

Word received from Fredericton is to the effect that John Kilburn, a well-known lumber operator, is seriously ill, having suffered a stroke of paralysis. He is in his 76th year and little hopes are entertained for his recovery.

Eastern Cut Will Be Away Down

Mr. G. H. King, M.L.A., of Queens, N.B., in a recent interview, said that there is much of last year's lumber cut yet on hand, not only in his section but throughout the province.

The lumber cut is likely to be down at least 50,000,000 feet in New Brunswick this season, and perhaps more. Mr. King pointed out that in 1918 the lumber operators are finding great difficulty in securing labor. Owing to the workings of the Military Service Act, there are now few young men in the country, but those of the 18 and 19-year-old class and the men beyond military age are not in the majority of instances sufficiently rugged to brave the strenuous activities of the New Brunswick lumber woods.

Heretofore, if a lumber exporter was successful in securing a bottom for lumber he was permitted to export a cargo without additional red tape. Now he must have a permit as when exporting lumber by rail.

"The United States market is not sufficiently large to absorb the entire cut," added Mr. King, "and there is no other market of any consequence open that I know of at the present time." In connection with the new regulation, he said that a St. John lumber exporter had at the present time a ship in port waiting a cargo, and the exporter was unable to secure the necessary permit in order to allow his ship to sail.

Personal Paragraphs of Interest

W. J. Lovering, of Toronto, who has been on an extended business trip to the Pacific Coast, has returned home.

J. H. Thickens, manager of the pulp and paper division of the Bathurst Lumber Co., Bathurst, N.B., for some years, has resigned.

Alfred Gall of the Gall Lumber Company, Toronto, who was laid up for some days with an attack of influenza, is able to resume his duties.

Hugh Stewart, late of Stewart Bros., Buffalo, N.Y., who was for some years a National Hardwood lumber inspector, has been appointed manager of the hardwood department of the C. G. Anderson Lumber Company, Toronto. Mr. Stewart is at present in Savannah, Georgia, arranging for the shipment of several cars of logs to Ontario, the shipment consisting of a considerable quantity of cypress.

R. F. Carter, secretary-treasurer of the Fesserton Timber Company, Toronto, has returned from an extended business trip to the Pacific Coast, where he purchased large quantities of western pine for the firm, who report a constantly increasing demand for this line of timber.

J. L. Nevison, sales manager of the Keewatin Lumber Co., Kee-

watin, Ont., spent a few days in Toronto recently on business, and called upon a number of friends in the trade. The Keewatin Lumber Co. are busy in their box factories at both Kenora and Keewatin, and they had a good season in their saw-mill at the latter point. The Company are operating three camps at the present time and hope to secure men to start a couple more before the season is very far advanced. Mr. Nevison states that the cut will not be nearly as large as last season, as in view of the scarcity of labor, the peace situation in Europe and the period of reconstruction, most firms are adopting a conservative policy.

C. G. Anderson, of the C. G. Anderson Lumber Company, Toronto, has been deer hunting in the vicinity of Espanola, and it is expected that he will remember his friends with liberal slices of venison.

Mr. Bowman, representing the Fullerton-Powell Lumber Company, South Bend, Ind., spent a few days in Toronto and other cities recently, on business.

F. C. Wade, of Vancouver, who was recently appointed Agent-General for B. C., in London, England, spent some time in Ottawa and Toronto this month. Hon. T. D. Pattullo, Minister of Lands, was also in the east for several days. Mr. Blair, late secretary of the Vancouver Board of Trade, has been appointed secretary to Mr. Wade, the new Agent-General, and will take up important detail work.

Charles J. Brooks, manager of the Toronto office of the Vancouver Lumber Co., left last week on a business trip throughout the Maritime provinces.

John A. Belford, one of the best known lumber salesmen in the Ottawa district, is no longer connected with the firm of D. G. Gilmore and Co., Ottawa, lumber brokers, who continue under the old name. Mr. Belford recently intimated that he would start in business for himself.

Captain Andrew MacDuff, who had a large share in organizing the Forestry Corps, has been appointed secretary of the Montreal branch of the Patriotic Fund. When overseas he was staff adjutant to the Director-General of Timber Operations in France and Great Britain.

Fred White, superintendent of the saw mill of the Riordon Pulp & Paper Co., at Calumet, P.Q., died from influenza on October 31, after three days' illness. He was taken ill on the train when bringing his wife from Montreal to Calumet, Mrs. White having been a patient at an Montreal hospital.

Mr. Hugh Blair, of Blair & Rolland, Montreal, and Mr. E. T. Todd of Watson & Todd Ltd., Montreal, who were very seriously ill with influenza, are now out of danger. Mr. J. S. Morrison, of the Laurentian Lumber Co., Montreal, has returned to business after an attack of influenza.

Matthew Burgess, secretary-treasurer of James Burgess & Sons, Limited, who conduct a saw mill and general store at Grand Falls, N. B., passed away recently.

Thos. P. Murray of Murray & Omanique Lumber Company, Barry's Bay, Ont., who has been the mainstay and inspiration of the Victoria Baseball team of that village, was recently tendered a public reception by the citizens and presented with a valuable gold watch and appreciative address. Mr. Murray has always taken a lively interest in athletics.

William Henderson, superintendent of the Shantymen's Christian Association which originated in Ontario, with the head office at Toronto, and which has recently extended its work into Minnesota, Wisconsin and Michigan, left Toronto recently for a visit to British Columbia, with the object of arranging for the extension of the work to British Columbia and northern Alberta. Arrangements have already been completed for taking care of the work of the association in northern Ontario camps this winter. Mr. Henderson will spend part of this month and all December in the United States organizing for the coming winter.

Geo. Taylor, manager for the Holt Timber Company, Bolger Bridge, Ont., who was in Toronto recently on business, stated that his company had been remarkably fortunate during their fall operations in that they had no outbreak of the Spanish influenza. Every man in their camps escaped the disease. Mr. Taylor thinks there may be some early improvement in the labor situation in view of the close of the war, providing a reasonable number of men, now engaged in other lines of employment, revert to their former jobs.

Many well-known figures to the lumbering trade at Ottawa participated in the floatation of Canada's Victory Loan. Among them were E. D. Hardy, Capt. team No. 2, Hardy and Reynolds, Canadian Lumber Insurance Exchange, Mayno Davis, McAuliffe-Davis Lumber Co., P. C. Walker, Shepard and Morse, R. G. Cameron, Cameron and Co.; E. R. Bremner, Watson and Todd; H. I. Thomas, John R. Booth; C. Jackson Booth, Fred Booth and John F. Taylor, E. B. Eddy Company. George H. Millen, president of the Eddy Company, was honorary president of the Hull territory, and Sir Henry Egan, honorary chairman of the Ottawa Victory Loan organization.

Better Equipment for Retail Lumber Yard

Why Certain Dealers Forge Ahead and Others Lag Behind in The Business Race —Some Practical Pointers on Delivery and Management

A country lumber yard properly equipped with tools is the rare exception. Every yard, of course, has a few. Some have more than others, but most dealers get along with as few as possible, because they don't realize that more of them would be of any value in their work and what few they have they don't take care of. Consequently, they are seldom in good condition. Small wonder is it then, that such dealers have to depend on running around and borrowing what they want when an emergency arises that calls for their immediate use.

Have you ever had a string of teams drive in to be loaded up and not one of the wagons in condition to begin on? No doubt you have and you know then the time it takes to make stakes with a dull hatchet, fix up reaches and loosen up rusty rods to get the end gates out. Perhaps you have had to send to the carpenter shop to borrow a brace and bit and a drawknife to make a new reach, and as you have done this so often, the carpenter naturally wonders why you don't keep such tools at the lumber yard. He feels sore, too, when he has to send to get them back again, for borrowed tools are seldom returned before they are wanted.

A country lumber yard is a place that is generally lacking in sufficient help at different times during the year. The average yard has but two men, the dealer himself and a second man. Usually the latter is at work unloading or delivering, leaving the dealer to wait on the customers. If they would only come one at a time, he could do all this work without rushing, but they don't do this. Instead, they crowd in upon him about noon and the latter part of the day and all want to be waited on at once. Those who are waiting never think of getting their wagons ready, nor of helping the first comers load in order to hurry things up. They sit around till their turn comes. Then the dealer has to fix them up in shape to load. Now, at such times as these, comments C. H. Ketrledge, in the Mississippi Valley Lumberman, every minute counts and every one that is consumed needlessly for lack of tools, is just so much time wasted, besides the bother and worry. A customer supposes that a lumber yard is always ready to attend to his wants and has the means to do it. It is for the dealer to anticipate and prepare for all the ordinary contingencies in the waiting on his trade, and the more he has of convenience and tools, the more rapidly and satisfactorily will he turn off his work.

What You Should Have

Now, I am going to enumerate a list of things which I think should be a part of the furnishings of every country yard. All of you have some of them. Some of you have more than others, but not everyone has those in the following list:

One crosscut and one rip saw; carpenter's steel square; two hatchets; one claw hammer; a grindstone; one or more coal shovels, including one with tines; a spade and a rake; monkey wrench; a screwdriver; brace and several bits; also a 1½-inch auger; one draw knife; small oil can; two board rules; one small steel pinch bar, 30 inches long, beveled on one side only; one car pusher; one coal screen; a couple of ladders; a ten-foot pole; two saw benches; a lot of sheet iron strips for bunching shingles; an assortment of nails and spikes, and one of the handiest things to have around a yard is a two-wheel lumber cart.

Another useful article to have on hand is a roll of tarred twine, like that they use for tying up lath, also a ball of strong wrapping cord. There are other little things such as screws, bradawl, and a chisel, that are conveniences when you want them. If you keep your own team on the yard premises, there are some things needed that I have not put in the list. Those that I have mentioned I know by personal experience are useful to have on hand many times in the year. Some of you may think a grindstone is superfluous. If you have one you will be apt to keep your hatchets sharp, and also to sharpen the spade for the cutting of weeds and grass in the yard. If you don't have it, these and others of your cutting tools will be always dull. If you have a saw clamp, too, you can learn to sharpen your own saws. A lumber yard saw is usually an abomination.

With all these tools on hand, the next thing needful is to keep them in good order; have a place for them and always in that place when not in use. To keep them from getting rusty, use that oil can I have included in the list. A small tool chest will keep them dry, and if you keep them there, you'll always know where they are. Stamp every tool you have also with the firm's name on it. The reason for this is obvious. It should be the special care of the yard man to go around every night and pick up the tools that may be lying out in the yard, and if by chance he is occupied till after dark, the manager

himself should see that it is done. Form this habit and it is no bother at all. Neither borrow nor lend is a good rule to follow, but if you do have to lend a tool at any time, make a memorandum of the circumstance. Then when it is not returned you'll not be puzzled over who took it. A yard ladder is something that people want to borrow more than anything else. One or two experiences in lending it caused me to refuse to let it go away from the yard, for one never knows when it will be returned and likewise when he is going to need it. There are some things I won't lend and my yard ladder and saw are among them. When I was working at my trade, when I wanted a tool, I went and bought it. I never borrowed nor lent my tools.

Some people have gotten into the habit of borrowing and depend on it, and somehow they find enough people who have not got the nerve to refuse them. When people find out they can't borrow, the belongings of a lumber yard they will cease to ask for them. I have been all through this kind of a mill and when I say that the less you do of this lending business, either of tools or lumber the better you will get along and make fewer enemies. But you must learn how to

An attractive and inviting retail yard and office

refuse in both word and manner of doing it. It is quite an art to say no, whether in this or a business matter. Some men can say it so that you will feel like apologizing for troubling them, but there are few things in business that are so necessary as saying no, or its equivalent, for it often marks the line between failure or success. We often have it on our mind to say it, but lack the courage to articulate our dissent, then feel like "kicking ourselves" afterwards.

Should Have An Extra Wagon

The majority of dealers who do their own teaming and delivery try to get along without an extra wagon. I did so for a long time, but the last years of my yard life I used one, and so useful did I find it that I often wondered how I got along with only one. I bought only the running gears and when I had occasion to need a box, I used a few planks for the purpose. With three men and one team we could do practically as much unloading from the car as could be done with four men and two teams. This means, of course, that one man does the unloading in the yard. Any active, husky fellow can do this if he knows how and he can keep the other two fellows busy bringing in the stuff to him. I know it is usual to think that it takes two men to unload a wagon from the side, but one only is necessary if he is the right kind of a man and has acquired the knack of it.

The expeditious unloading of a car is more important today than it was in pre-war times. The main thing now is to get it over to the yard in the shortest time possible, and distribute the stuff where it belongs afterwards, as will have to be done in the case of a mixed carload. It is wasting time now to use only one wagon and haul the stuff to the various piles. In case the third man cannot be obtained, the extra wagon can be used by the two men to great advantage as will be made apparent in the use of it.

Another purpose for which it is useful is when you are delivering a bill in the town. While the team is gone with a load another can be loaded up ready to go out when the team returns. In this way a bill can be delivered in nearly half the time it usually takes with the one wagon. It comes handy, too, in another way, when you are hauling coal and want to deliver a load of lumber, instead of having to take off the wagon box from the coal wagon. The other running gears can be used without any delay.

In the larger yards, of course, they have more than one team and

two men, but the average country yard is in a small town. Most of them are not as well equipped to handle business as they ought to be and they try to get along with as little as possible. There is probably some excuse for the line yards in these small places for keeping down their investment in such things, but it seems to me that the dealer with the one yard could make it pay him to have anything that will reduce his labor and afford better facilities for doing business. Doubtless there are many single yard operators who have all these things, but from what I can judge, the large majority of such yards are run with little or no change in equipment from what they had years ago.

To Own Or Hire a Team?

I find, in talking with dealers at the conventions, a good deal of difference of opinion regarding the having one's own team to do the necessary hauling, or hiring the drayman to do it for them. It seems to be more of a question of expense than of utility. I think that every dealer would prefer to have his own facilities for hauling and delivering than to be bothered with the uncertain, and often unsatisfactory service of the town drayman. But, as before said, it is largely a matter of which costs the less. It depends somewhat on the size of the town and the conditions of the situation.

We used to say that a team should be kept going or it would eat its head off. This is truer today probably than it was when feed was cheap and horses were worth half of what they are now. But, notwithstanding this fact, it seems that where a second man has to be kept he could do all the teaming work instead of employing another man to do it. This, of course, would throw more yard work on the manager when the second man was out with the team. On the other hand, with no teaming to look after, the second man is at the yard practically all the time, which gives the manager more opportunities to leave the office and get out after business and collections.

Six months at least, of the year, the country yard is hampered for lack of help. Dealers are charged with waiting for the business to come to them and it is true that they have gotten into this attitude of mind. The principal reason for this, however, is because of their inability to leave the yard to run around much on the outside, for the second man has about all he can do in his line of work. It is not always easy to get a third man when you want him the most, but where it is possible, employing one would give the manager a chance to get away at the times when it will do the most good, and the second man could take care of the business in his absence. Of course, where a bookkeeper is employed, the dealer can get out most any time. But in most country yards, the manager has to do all of the office work himself, and in these days of the telephone it keeps him pretty closely tied to the office.

Before the telephone came into use, a dealer could leave his office to look after some outside matters. Many dealers in those days had no help at all and played a lone hand in running the yard. But now, with the telephone, he never knows when someone's voice will enter his office with an order or an inquiry about something that no one but him can answer. I played this lone hand game for several years and I know all about what it means. During that time, I hardly ever got out into the country except on some Sunday and very seldom did I get a chance to leave the town limits to go anywhere. With two yards in a small town, it keeps each dealer confined to his office and within easy reach of his telephone, besides keeping a watch on the competitor, which, of course, ought not to bother either one. But they will do it, and therefore, both stick to their yards, for fear that the other will take advantage in some way during their absence.

Why They Do Little Advertising

I don't suppose, however, there are many, if any; yards now that are being run single-handed. There is so much more office work required than formerly. What with intricate systems of accounting and making out reports, looking after advertising and a plan book system, if a dealer has no bookkeeper to help him, a good portion of his time is occupied at this work and he has little opportunity to get out and do missionary work among the farmers. The business is so cut up and divided now that the yards cannot afford to employ the necessary means for the expansion that is needed. Many a dealer could get out and create more business if only he had the time to spare from his other work that has to be done. We all know what this spur is behind us, if we leave it for something else. Some dealers have told me they thought a plan book system was a good thing but they hadn't the time to give it the proper attention it needs to make it a success and there was no use in taking hold of it unless such could be given it.

The average country dealer is apathetic in the matter of advertising. He thinks it does not pay because what little he does and the way he does it have never seemed to him to increase his business. The fact is, he is conscious that he doesn't know how to write the right kind of advertising and if he could, he thinks he hasn't the time to bother with it. Changing an ad every week and influencing public opinion through the local newspaper, as should be done, is some job and takes a lot of time and thought for the average business man, even

though he has the ability. The multifarious duties of a country yard dealer leave him little time to take up the extra things that modern merchandising has introduced into business, unless he has sufficient help in his office and yard that will enable him to give them the attention they require to make them profitable.

Individual yard dealers can and should do these things, because they have no one else to govern their actions but themselves. They can employ all the help they need to give them the time to develop the opportunities which are ever present with a country yard. There is no excuse for a man with his own yard in letting these opportunities lie dormant for lack of cultivating. He can employ all, and the right kind of help he needs to make this intensive work pay him in an increased volume of business and profits, and there never was a time when such dealers needed more to do these things to "save their bacon" than at the present and from now on.

Any close observer can see that the line system of yards is increasing, and this is because of the fact of their enterprise in adopting modern methods and giving the public more and a different kind of service. Many single yard dealers are doing business in the same town under satisfactory conditions. They got along with their old system of doing things and congratulate themselves in being able to hold their own. Some, of course, are doing this by their superiority over the line yard manager, but the majority are really holding their places on sufferance of the line yard concern, for, any time these concerns want a yard they go for it and get it, and it is plainly to be seen they are getting them in one way or another.

Highest Membership for the National Association

An important meeting of the Executive Committee of the National Wholesale Lumber Dealers Association was held in New York recently. The report showed the organization to be in a most prosperous condition, the membership in the association of 434 and the Bureau of Information being the largest in the history of the organization. Business conditions are probably responsible for this substantial growth, and as the members are using the facilities of the association to a greater extent than ever, they are also interesting others in the membership, and the reports of the various committees and departments submitted to the Executive Committee indicate a wide range of activities and a substantial increase in all work since the annual meeting in March.

Among the important discussions was Circular 21 issued by the Priority Division of the War Industries Board regarding non-war construction and the amendment which briefly provides that with certain war emergency exceptions constructions covering repairs to existing buildings involving a cost exceeding \$2,500 and for new farm construction involving a cost of more than \$1,000, shall be prohibited unless permits are obtained from the Priority Division of the War Industries Board. This has been referred to the officers of the association for investigation and further report, and in connection with this subject was considered the report of the committee which represented the association at the National Federation of Building Industries, which was organized in July, at Atlantic City. A committee was appointed to attend a convention of the National Federation to be held in November.

Other reports were submitted showing what the association has accomplished toward keeping its members posted in connection with government prices on lumber, several thousand copies of each bulletin have been distributed and because of its concise form many lumbermen, associations and government agencies have asked for additional copies.

The report of the Bureau of Information indicated an extended use of the privileges of that department and as a result of the larger membership the credit reports have increased not only in number, but in the character of information available. The figures for the Collection Department showed a large amount of business handled and that many more members were availing themselves of the privileges of asking an opinion on commercial disputes, thereby frequently saving the cost of an attorney fee.

The transportation situation had much attention, and the report of the Traffic Manager covering the result of several visits to Washington and investigations in other cities in connection with the issuance of permits and railroad regulations showed how useful this department was to the membership, many finding this feature alone well worth the cost of membership. Many prospective members are considering availing themselves of the association privileges and there seems to be no question that the current year will witness remarkable increase not only in membership, but in all the association activities, and a letter is being prepared by President Taylor to be sent to the members within a few days reporting on these subjects.

Those present were: Horace F. Taylor, president, Buffalo, N. Y.; J. W. McClure, Memphis, Tenn.; M. E. Preisch, North Tonawanda, N. Y.; F. W. Babcock, Pittsburg, Pa.; E. F. Perry, secretary; W. W. Schupner, department manager and W. S. Phippen, traffic manager.

High Honor for Capt. George Reid

Capt. G. T. Reid, D.F.C., Toronto

in recognition of the achievement of the young officer, conferred upon him the rank of Captain before the latter left Montreal for overseas. After six or eight months in woods operations in England and France, Capt. Reid was given a furlough, which he spent in England, and there he met a number of his chums who had been fellow students at St. Andrew's College, Toronto, and Bishop Ridley College, at St. Catharines. These boys were members of the Royal Flying Corps, and Capt. Reid was only too anxious to become identified with this branch of the service. He took an observer's course, carrying his rank of captain, and after several weeks spent in this branch next served in night bombing squads, and in July last was transport officer in connection with the Royal Air Force to France. Capt. Reid has had some thrilling experiences. In January of this year something went wrong with his aeroplane, which fell in the English Channel. Capt. Reid's pilot was drowned, but he managed to cling to a raft and was finally picked up in an exhausted condition. Between July 1st and the early part of September Capt. Reid made 21 raids over the enemy's line, and out of eleven aeroplanes which went out one night on a bombing expedition, his was the only machine to return. Capt. Reid has had many sensational and hairbreadth experiences and at the close of the war will possibly return to Toronto, where he will be given a hearty welcome for he has rendered distinguished service both in the aerial and forestry branches.

Death of Promising Young Lumberman

Many friends in the retail lumber ranks in Toronto will learn with sincere regret of the death of Hugh Brennen, assistant manager of the Riverdale Lumber Company, Toronto, who passed away on November 1st, from an attack of influenza, followed by pneumonia. The Riverdale Lumber Company has felt the heavy hand of death in a particularly poignant manner during the past few months, as on June 16th last Wm. J. Hetherington, general manager of the company, expired very suddenly. Mr. Brennen, who had been his right hand man in the retail end for nine years, then took up the duties of Mr. Hetherington, so far as they related to the Riverdale Company, while Mr. Geo. Kinnon, associated with the firm for fifteen years, assumed the management of the wholesale end, known as the Wm. Laking Lumber Company.

Mr. Brennen was ill for only nine days and his remains were taken on November 3rd to Hamilton, where they were interred. The deceased was 29 years of age, and resided at 148 Booth Ave., Toronto. He always took an active interest in the Broadview Y.M.C.A., and the Beaches Baseball Club. Mr. Brennen was an ardent supporter of clean, healthy sport, and more particularly baseball. Besides his wife and family of two small children, he leaves two sisters, living in Toronto, and his father, E. S. Brennen, who is in the fuel business in Hamilton, and was for a long period in the lumber line. Mr. Brennen was an able, faithful and upright citizen who enjoyed the esteem and confidence of a large number of friends in the trade. His duties in connection with the Riverdale Lumber Company are at present being looked after by Mr. Kinnon.

Ottawa Lumberman Joins Silent Majority

C. H. Walters, only son of H. McD. Walters, Ottawa, died recently at the Royal Victoria Hospital, Montreal, from an attack of pneumonia. The late Mr. Walters was in his 30th year and leaves a wife and two

children. He was in the employ of the McAuliff-Davis Lumber Company, Ottawa, for four years and when the new organization was formed in June, 1917, to take over the old company, Mr. Walters was appointed secretary-treasurer. He held this position until June of this year, when he left the employ of the firm temporarily, to accept a position as secretary-treasurer with Fairfax Forgings, Montreal, who are engaged in making American shells. Mr. Walters was to return to the McAuliff-Davis Lumber Company at the end of the war, and it is a matter of deep regret to them that they have lost his services, as the deceased gave every promise of having a most successful career in the lumber business. The late Mr. Walters was very popular with all whom he came in contact and his early death is a distinct loss, not only to his employers, but to the various retail associations with whom he was associated.

The Passing of Fred S. Macfarlane

After an illness dating from the first week in August, Mr. Fred S. Macfarlane, president of R. Macfarlane & Co., Ltd., wholesale and retail lumbermen and manufacturers of interior trim, Montreal, died on October 28, at his residence, Westmount, aged 47. Mr. Macfarlane, who died of tumor on the brain, was removed to the hospital, but returned to his home two weeks prior to his decease. The business was founded by his father in 1874, and grew to be one of the largest of its kind in the city, specializing on manufacturing to architects' details. Mr. Macfarlane was identified with the firm practically all his life, and had general direction of affairs during the last few years. On the death of his father in 1915, he became president of the company. The business is being carried on in the interests of the estate. Mr. Macfarlane, who was a native of Montreal, is survived by his widow, four children, and a sister. The funeral was attended by many representatives of lumber firms. Mr. Macfarlane was one of the most active members on the Lumbermen's Reception Committee in Montreal, who welcomed the Toronto retailers on the occasion of their visit to that city in July last.

How Ontario's Forest Revenue Grows

The important part the Crown timber lands of Ontario play in defraying the costs of civil government is indicated by the fact that during the last provincial year forest revenue was collected aggregating \$1,695,703, a gain of \$360,382 over the previous year, and including \$115,327 collected from limit-holders as fire-ranging dues. Nearly one hundred million feet less pine lumber was cut than during the precedent year, labor shortage operating largely toward this diminishment, although the progressive depletion of the white pine forests is clearly recognized. The total pulpwood "cut" for the province was 445,978 cords, of which approximately equal amounts were cut from settlers' lots and Crown timber areas. It is regarded as beyond question that the pulp and paper interest will continue to expand, and this development will materially aid in the redemption of Canada's war debt.

Now Using Some Birch in Paper Making

From the investor's standpoint the position of the Canadian pulp and paper industry has undergone improvement since the Paper Controller fixed the newsprint price in Canada at \$69 with the subsequent raise to \$75 by the United States appeal tribunal.

During the past year, by co-operation of the executives of the larger newsprint mills, plans have been put into action by which Canadian-made newsprint will be steadily improved in quality so as to command a special price in foreign markets. Quantity production on the present plant basis has about reached its limit. It is realized that quality of newsprint will bring a preferential price in future and the Canadian mills are headed for that goal. Five of the big mills are now pooling all their data bearing on production. Meetings of all departmental heads are now held quarterly at the plant of one or other of the companies. The day of trade secrets has been declared over. Another advance of much significance was the success of a Quebec newsprint mill recently in using ten per cent. of birch with its usual mixture of spruce and balsam pulp. No Canadian mills have thus far used any hardwoods which in Ontario and Quebec are so prolific that they are regarded as 'weed trees' and left to waste. The mill in question is now using birch wood regularly and other mills may be expected to follow its example. This means an enormous saving of the limited stock of spruce.

It is stated by paper mill men here that as soon as the trend of peace conditions becomes apparent, extensions to present mills will be commenced. Between 1914 and the early part of 1917 the daily output of Canadian newsprint mills had risen from about 1,300 tons a day to about 2,100 tons, an increase of more than 60 per cent. Between 1917 and 1918 the increase was from 2,100 to 2,300 tons a day, or less than 10 per cent.

B. C. Mills are Looking to the East

A. E. Gordon, Toronto

Who speaks of conditions of the lumber industry in the West

A. E. Gordon, of Terry & Gordon, Toronto, recently returned from an extended visit to British Columbia on a tour of inspection of their stocks of lumber, which are put up specially for their Ontario and Eastern trade. Mr. Gordon reports that most of the mills in the Mountain district are closed down for the season, with a fair stock of lumber on hand, little of which is, however, sawn plump enough in size to suit the Eastern market. He found the lumber manufacturers in B. C., outside of the firms in their own connection, anxious to open up markets in the east, while those identified with their own business, are looking for an increased trade in Ontario, Eastern Canada and the New England States. About

one-third of the stock handled annually by Terry & Gordon is shipped from B. C., and is increasing rapidly every year, consisting of B. C., western pine, mountain spruce, gray fir and larch from the mountain districts. Mr. Gordon states that business conditions on the B. C. Coast are fairly brisk, owing to the shipbuilding activity and export trade and the eastern requisitions in timber and lumber. "In fact, it is his opinion that the lumber trade in the east must look to British Columbia for a greater portion of its supply. The firm are shipping a large quantity of Douglas fir lumber and timber, as well as Coast spruce and hemlock to eastern Canada and the American market, and have also experienced a greatly increased demand during the past year for the better class of B.C. red cedar shingles.

Lumbermen Boosted Victory Loan Bond Issue

In order to show their practical sympathy and earnest support on behalf of the Victory Loan Committee the lumber wholesalers of Toronto, after a conference with the Victory Loan Committee, raised a fund of some \$1200.00 and paid for a full-page advertisement in the daily papers. Their generous action was much appreciated, and, along with the co-operation of other industries, the objective sought in the Queen City was given a decided impetus. The committee in charge was composed of Messrs. H. G. McDermid, A. C. Manbert, W. C. Laidlaw, Alex. Read, and A. E. Clark, who did their work faithfully and were given ready assistance on the part of the trade.

In the space contributed to the "Winning of the War" by the wholesale lumbermen of Toronto, it was pointed out that all the bonds possible should be bought in order to back up the 66,000 Toronto boys who have already gone to the front and had done or were doing their bit. Many of these men had given up their businesses, had made great personal sacrifices and, in not a few instances, had bestowed their lives, and the least that the citizens at home could do was to lend the Government all the money they possibly could, to help clothe and feed fellow citizens in the service and arm them so that "they could help win the war and return victorious as soon as possible."

The lumber firms which contributed to the fund for this effective, patriotic purpose were: C. G. Anderson-Lumber Co., Limited; Robert Bury & Co., Canada, Limited; Canadian General Lumber Co., Limited; Canadian Western Lumber Co., Campbell, Welsh & Paynes, Edward Clark & Sons, Limited; Conger Lumber Co., Limited; Elgie & Jarvis Lumber Co., Limited; Gall Lumber Co., Limited; A. B. Gordon, Frank H. Harris Lumber Co., Limited, Hart & McDonagh, J. P. Johnson & Son, Johnston Lumber Co., Knox Brothers, R. Laidlaw Lumber Co., Leak & Co., Limited; W. J. Lovering, W. D. Lummis, McBean & Verrall, Oliver Lumber Co. of Toronto, Limited; Read Brothers, Limited, Terry & Gordon, Union Lumber Co., Limited, and Victoria Harbor Lumber Co.

Snow Fall Will Help Wood Shipment

Many municipalities which were depending upon getting a quantity of wood from Algonquin Park, during the past summer took advantage of the Ontario Government's offer to cut wood. They are now disappointed in not receiving the fuel. Arrangements have been made to haul the wood, but there the matter stands at present. There must be a fall of snow in order to facilitate the bringing of the forest product to the siding. "The beautiful" has been delayed this year a little later than usual and active steps have been taken with the Departments of Lands and Mines in order to hasten shipments.

Merchant Ships to be Owned by Canada

Figures demonstrating that the prices paid by the Canadian Government for steel merchant vessels compared favorably with those paid by the Imperial Munitions Board for ships built in Canada for the British Government were quoted by Alex. Johnston, Deputy Minister of Marine, in an interview. Mr. Johnston replied to a newspaper assertion that the inauguration of the Dominion Government's shipbuilding programme had delayed completion of ships ordered by the Imperial Munitions Board and prevented that body from placing additional contracts in this country, says a recent despatch from Ottawa. "As the direct result of the policy of building ships by the Imperial Munitions Board," said Mr. Johnston, "it is true that Canada is without one ship to assist in the transportation of its men. It was with a view to remedying this very deficiency that the Minister of Marine successfully urged the Government to undertake the construction of merchant ships to be owned by Canada, registered in Canada and entirely subject to the direction of the Canadian authorities. The ships built by the Imperial Munitions Board are not to be owned by Canada; nor are they to be of Canadian registry or subject in any way of direction or allocation by the Canadian Government.

Must Conserve the Paper Supply

Necessity for conservation in paper is quite closely connected with the large consumption of sulphur and chlorine for war needs, according to an opinion expressed by R. J. Keenan, an American chemist, who is connected with the paper industry, says "The New York Commercial." Both bleached and unbleached papers that contain sulphite pulp must now be conserved. Large quantities of sulphite or calcium and free sulphurous acid are used in the manufacture of nearly all book and magazine papers. Newsprint papers contain 15 to 20 per cent. of sulphite pulp. Since many of the papers that are styled as manilla contain sulphite pulp, the call has gone forth for greater economy in their use, as well as the book, magazine and cheaper bond papers, some of which are made entirely of sulphite pulp.

It is declared that the development of gas warfare on the Western front and difficulty in getting a full supply of sulphur and chlorine are what has caused the United States Government to take over control of the sulphur fields of Louisiana and Texas and of the chlorine industry. The mustard gas shell, which is one of the most effective employed, is composed of dichlorethyl-sulphide, which is a compound containing chlorine and sulphur.

National Association Will Raise Assessments

The Executive Committee of the Board of Directors, meeting in Chicago on October 24, to consider matters referred to it by the Board of Directors, meeting October 4, 1916, adopted the following resolution: Whereas national and international conditions demand larger and wider activities on the part of the National Lumber Manufacturers Association than at any time in the past that the interests of the industry may be properly safeguarded, and whereas the need of additional revenue is indispensable to the promotion of these activities for the many reasons.

The Executive Committee to which was referred the proposal of the secretary-manager for an adjustment of the income basis has given full consideration to that subject. The Executive Committee therefore requests the president to call a meeting of the Board of Directors to assemble in Chicago on December 15, 1918, to give consideration to the following propositions upon which the Executive Committee recommends the favorable action of the Board of Directors:

First: That additional revenues are indispensable;

Second: That a new contract, beginning January 1, 1919, be entered into with each of the affiliated regional associations by which the assessments for each shall be:

For the first three months, beginning January 1, 1919, $\frac{3}{4}$ c. per M. feet;

For the second three months, beginning April 1, 1919 1c. per M. feet;

For the third three months, beginning July 1, 1919, $1\frac{1}{4}$ c. per M. feet;

For the fourth three months, beginning October 1, 1919, $1\frac{1}{2}$ c. per M. feet;

and continuously thereafter at the rate of $1\frac{1}{2}$ c. per M. feet produced, or shipped, until the rate of assessment shall have been changed by mutual consent.

In consideration of the momentous problems now confronting the lumber industry of America, it is the opinion of your Executive Committee that the lumber industry, through its National Association, should not fail to respond to the challenge presented in the existing and expected future conditions prevailing throughout American industry and that no effort should be spared to safeguard the interests of the industry.

Shipbuilding News from all over Canada

The War Ontario, which was the first standard wooden steamer launched from the yards of the Toronto Shipbuilding Company, underwent her trial trip recently and will make her maiden voyage in a few days. Among the large company on deck were representatives of the Imperial Munitions Board to whose specifications the freighter was built.

The P. Q. Towing Co. of Dalhousie, N.B., has been granted a federal charter with a capital stock of \$50,000 to carry on the business of towing in all its branches, and a general wrecking and salvaging business. Among the incorporators are Philip R. Huussey of Dalhousie and Frank J. Allard of Carleton, N.B.

A new wooden ship was launched recently by the Quebec Shipbuilding and Repair Company. It is a full rigged schooner, measuring 200 feet over all, with 740 tons register and dead weight tonnage of 1,240 tons. She is built of B. C. fir and Canadian spruce, oak and birch. The keel stem and stern are constructed of oak and the balance of construction of the remaining woods.

Construction of wooden steamships for the French government is now in full swing at the Poplar Island yard, B. C.. Four keels have been laid, two of the vessels are in frame, the frames for the third are cut and part of those of the fourth. It is not intended to lay the fifth keel at present.

A contract has been entered into by the Dominion Government with the Victoria Machinery Depot of Victoria for the construction of two ships of 8,100 tons each.

The Imperial Munitions Board are operating 69 camps in the Pacific Coast province, in the cutting and milling of timber to be used for airplane construction. The Sitka or silver spruce is the wood most valuable for airplane construction.

An extension is being built to the shipyard of Three Rivers Shipyard Ltd., at Three Rivers, Que. The work will cost \$200,000.

Women as well as men now have an opportunity to study ship drafting at Columbia University. The course is given in three parts, mechanical drafting, a first course in ship drafting, and a more advanced course in that instruction, preparing for the United States civil service examination in ship drafting.

Contracts for the construction of seven wooden steamers of 3,200 tons each have been given local shipyards, according to news received in Vancouver. The vessels are for Belgian interests. The Northern Construction company, formerly the Western Canada shipyards, will build four vessels and the Coquitlam Yards of the Pacific Construction Company will build three.

The tern schooner "Truro Queen" was recently launched from the yard of McLean and McKay at Economy, N.S. The "Truro Queen" will be used in the lumber-carrying trade and her first cargo will be from St. John to Buenos Ayres. The freight rate for lumber between these ports is about \$65 per thousand. The "Truro Queen" is 165 feet in length with 34 feet beam and 12 feet depth. She is 450 tons gross and will carry half a million feet of lumber.

British Columbia is to have still another shipbuilding yard for the construction of wooden ships. The Standard Shipbuilding Co., which several months ago negotiated unsuccessfully for a portion of the Kitsilano Indian Reserve at the mouth of False Creek in Vancouver, announces to-day that it has secured contracts for the building of twenty-one wooden ships. Two of these will be of 3,500 tons for Portuguese interests, twelve of 3,500 tons for the French Government, two of 3,500 tons for Italian interests, and five of 5,000 tons for the Portuguese Government. Delivery dates run from February of next year to December. The company which as yet has no plant, has purchased nine and three-quarters acres of land at Port Haney on the Fraser River, where the ships will be built in pairs and launched sidewise with the engines and boilers installed. The boats will be coal burners and will be of the Donohoe type with steel keelsons which will provide more carrying capacity. The contracts are valued at \$16,250,000.

The Three Rivers Shipyard Company Ltd., have started work on ten 1,500-ton wooden ships.

Ship No. 3 is ready for launching at Port Coquitlam, while ship No. 4 is progressing satisfactorily, and the travelling derrick for ships Nos. 5 and 6 has been built.

Montreal representatives of the Imperial Munitions Board engaged in supervising the fitting and machinery installation of the wooden steamers built and launched from the yards of Quinlan and

Robertson, and the Quebec Shipbuilding and Repair Co., Ltd., Louise Docks, have received instructions from Ottawa to stop the work of fitting guns on board the ships, and also stop the providing of quarters on board some vessels for gunner crews.

A handsome schooner was launched recently on the Salmon River, Digby County, N.S. The vessel was built by J. N. Rafuse & Son, of Conquerall Bank. She is 114 feet keel, 30 feet wide, and registers 300 tons, and is named "Beatrice." The construction of the vessel has constituted a record, as she was launched in less than six months after the keel was laid and all the work was done by hand. Rafuse and Son will shortly commence work on another schooner of 500 tons.

The Cregan Steamship Company, New York, are building a new schooner of 135 tons burden at Sandy Point, Bay St. George, Newfoundland. The vessel will be completed next spring and will carry fish from the west coast of the United States.

A four-masted ship was recently launched by the McKenzie Shipbuilding Company on the River John, N.S. The ship is known as the Cambrai, and is 178 feet over all with 153 feet keel and 36 feet beam. Native woods are being used. R. M. McGregor, M.P.P., is one of the company interested in the building of the vessel.

The Minister of Labor, Ottawa, has appointed J. A. McAndrew, of Toronto, as chairman of board of arbitration which will investigate the dispute in the Toronto shipyards. The two other appointees

UNCONSCIOUS CANDOUR

German Father—"Can't we see our victorious fleet?"

Official—"No, you can't. Nobody can!"

—Punch.

are J. G. Merrick, of Toronto, who represents the employers, and John Doggett, also of Toronto, representing the men. The dispute which is over a matter of wages involves carpenters, caulkers, joiners and woodworking machinists working in the Toronto yards.

The Claire Shipping Company of Meteghan River, N.S., have just completed another splendidly built schooner, which measures 182 feet over all, 47 feet beam, 13 feet depth and 591 tone net.

The War Quebec, a wooden steamer built by the Quebec Shipbuilding and Repair Co., recently made a successful trial trip, going as far as Grosse Island and back, the vessel being under the supervision of Captain McCormack, who, together with officers and crew, recently arrived from England. All on board were jubilant over the initial voyage and the War Quebec averaged a speed of 10½ knots an hour.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

UTILIZATION OF LOGGED-OVER LANDS

In connection with the proposal to utilize the logged-off and burned-over lands of the Fraser Valley as pasture, it is desirable, perhaps, to say that what might profitably apply to one special locality would be very poor economy if given general application. Lands especially adapted to silviculture should undoubtedly be scientifically reforested if our posterity is to maintain the high standard of B. C. lumber. And naturally the portions of the province already logged over are, generally speaking, the very portions upon which the best trees are likely to spring up again. At any rate, in the interests of the

conservation of our wonderful natural resources, the matter of devoting land adapted to bear the best timber to other purposes should be first carefully considered from all angles.

In this connection, it is interesting to recall what R. H. Campbell, Director of Forestry, Ottawa, said before the B. C. Forest Club at Victoria, on September 17th, 1915. He was speaking of a trip through Scotland, during which he and some others inspected the plantations of Douglas fir, pine, and other species on the Murthly estate. The proprietor explained that as he could only get a shilling an acre from grazing, he had planted trees, which would bring him in from three to five shillings an acre a year. He said others would have followed his example only that they could not afford to wait for their returns. In reply to an argument that forestry interferes with population he pointed out, for his locality, that it had quite the opposite result, as one man could care for a thousand sheep grazing over 2,000 acres, whereas, with timber, there was work for a man on every 100 acres. Of course conditions in B. C. are different from what they are in Scotland, and it may be that pasture here would, in some localities, be better economically and socially, than reforestation. It is a provincial and national question, and as such demands attention.

VERDICT AGAINST NIMPKISH LAKE LOGGING CO.

An interesting recent trial ended in a verdict of \$35,000 against the Nimpkish Lake Logging Co., Vancouver, in the alternative, against Capt. M. M. Garland, managing director of the company, and in favor of C. S. Roray and O. G. Yeaman, Vancouver timber brokers, who brought action to obtain \$50,000 commission for negotiating the sale of the Nimpkish Company's limits to Messrs. E. G. English and F. J. Wood. A previous similar action had been successfully brought against the company by Charles Wyatt and C. C. Dixon, which the plaintiffs urged was a "love-feast," arranged for the purpose of defeating their claim.

During the trial a witness (C. C. Dixon, one of the previously successful plaintiffs), admitted that Captain Garland, the manag-

1—No. 190 Berlin Buzz Planer.

1—No. 290 Berlin Picket Header.

The Otis Staples Lumber Company, Ltd.,

19-t.f. Wycliffe, B.C.

ing director, was to receive back a big share of the commission paid. The judge then submitted the following questions to the jury. Had the plaintiffs authority to act as agents of the defendant company to sell the property? Did Capt. Garland, as managing director, represent to the plaintiffs that he had full right to employ them as agents? Was the sale made by the plaintiffs? The answers were all favorable to the plaintiffs, and judgment was given as above mentioned.

Since the hearing of the above case the holders of prior lien bonds and debentures of the Nimpkish Lake Logging Co. have entered suit against the company for the enforcement of a trust deed dated Nov. 24, 1915, and for a receiver and manager of the property.

FREE EXPORT OF B. C. LOGS

The value of the United States market to the British Columbia shingle, cedar lumber and spruce manufacturers is now being realized through the maintenance of the embargo on forest products, says "The Timberman" of Portland. The effect on the shingle industry is especially noticeable where the output is very largely sold in the United States.

British Columbia imposes restrictions on the free export of logs to the United States. The United States, on the other hand, does not impose any restrictions on the export of logs to Canada. It is only equitable that the laws on this question should be reciprocal. The subject of the free export of British Columbia logs will be considered by the American Tariff Commission in making its report to Congress in the matter of the imposition on Canadian lumber entering the United States. The plan at present pursued in dealing with the export of logs from the province is to place it in the hands of a committee consisting of three loggers, three lumbermen and three representatives of the Government, who decide whether conditions are propitious for granting export privileges.

B. C. FOREST FIRE SEASON

Because of the long dry spell the fire season of 1918 was a particularly bad one in B. C. Fires started earlier than usual, and September, ordinarily a wet month, was this year drier than ever previously recorded by the meteorological bureau. Logs and camp equipment were lost, with, fortunately, little green timber. But for a timely rainfall the fires which broke out in a number of places in the Fraser Valley, in the latter part of September, might have proved very serious. As it was, the Stave Lake limits of Abernethy & Lougheed suffer-

ed considerable damage, and at Cultus Lake some timber which had been affected by fires in July was again scorched. Several small fires occurred elsewhere in the province since, but they burned mostly in logged-over areas and did little damage.

THE STORY OF WHITE PINE

The habitat of the true white pine seems to have been confined to a district surrounding the Great Lakes, largely in Quebec, Ontario, Michigan, Northern Minnesota and Wisconsin. While widely separated and distinctly different in topographical features and in climatic and soil conditions, yet each of these provinces and states has produced in almost identical quality that species of tree known as white pine.

The white pine (*Pinus Strobus*) of Ontario and Quebec, Michigan, Wisconsin and Minnesota, is alike characterized by its extreme softness, ease of working, strength, durability, its ability to stay in place after once being fitted, its freedom from pitch or objectionable acids and its consequent remarkable qualities as a structural wood, especially for outside uses.

The white pine formerly cut in our territory was a large growth and of an exceptional quality of soft almost cork-like texture, and there is still remaining a large quantity of this same high quality of timber in Northern Ontario, Minnesota and Wisconsin. It must not be supposed, however, that all white pine from any one locality is of equal quality. The choicest of old growth white pine does not grow alone, but the highest quality and the coarser types usually grow together, often intermixed in the same territory.

In general, the marked characteristics of Northern white pine are softness of texture, evenness of fibre, closeness of grain, absence of unruly cross-grain, ability to stand exposure out of doors through varying extremes of weather, hot or cold, wet or dry, without deterioration or rot and an absence of any tendency to open at the joints, to warp or to crack after once being put into place. It shrinks less than any other structural wood, is very light, and while it does not possess in pieces of equal dimension the strength of some of the harder heavier woods, weight for weight, it has no equal. For pattern work or the most delicate wood carving, it is the first choice of all woodworkers.

White pine, in its freedom from resin or pitch or from objectionable acids or oils, takes paint or enamel finish perfectly. It absorbs and grips the paint but does this economically and holds its coat of paint longer and more perfectly than any other wood, hard or soft.

Review of Current Trade Conditions

Ontario and the East

The situation with respect to the lumber market is just now a rather peculiar one, owing to the close of the war, and conditions are considerably at sea, with prices somewhat unsettled. A number of firms are not furnishing any standing quotations unless they find that an enquiry means business when a definite figure is given. The recent outbreak of influenza, the disruptions to the ordinary channels of business, caused by the Victory Loan campaign, the signing of the armistice and uncertainty generally created by the drama in Europe have all tended to create a state of perplexity which has never been faced in the history of the local market and may never be encountered again.

Much speculation is going on with respect to what will happen now that the war is over. General opinion is that things will continue pretty much as they are for a few weeks, at least, until business interests are able to get their breath and take a calm survey of the surroundings. While it is predicted that values will fall to some extent, there will, it is contended, be no immediate drop. Such a thing as the bottom being out of the market is regarded by those conversant with conditions as an idle platitude, and the necessity of stability and confidence is recognized on all sides. Everybody is having a guess as to what will prevail during the progress of readjustment, and pretty nearly every theory is evolved to fit in with the speaker's own idea of affairs, depending much upon whether he is a buyer or seller, the amount of stock on hand and whether he has managed to make a good clean-up during the war period.

However, in the multitude of opinions there is wisdom, and the dispassionate observer cannot fail to note that, in the broad programme of reconstruction and industrial expansion there is bound to be a steady, active demand for many lines of lumber, while stocks are not heavy. Shipping permits are arriving more freely and local wholesalers have little to complain of in this respect. The machinery at various points has been speeded up and more consignments are now going over the border than last month. Shipments, however, are in some instances only about one-third to one-fourth of what they were during this particular period last year, due to the fact that American customers are buying only what they can immediately dispose of or use. There is no such a thing as stocking up and operations are confined to immediate needs. War work and U. S. building restrictions are accountable for the diminished commercial demand, and no change is expected in the market until the situation in Europe definitely clears.

There are some firms disposed to take rather sombre views of the future, but on the whole the majority are determined to sit tight and watch operations, believing from the way things are shaping up that they will in the end bring satisfaction to everyone providing a clear head and steady purpose are maintained and there need be no bearing of the market.

The building trade shows a fair amount of activity and repair work is becoming more general now that farmers are through with harvesting and fall ploughing. Furniture and other woodworking plants are fairly busy and complain of a shortage in certain lines of wood as well as of labor.

Practically all the sawmills in Ontario and Quebec are closing down this month and the stocks of lumber on hand were never as low as at the present time, while woods operations will be restricted in some sections from 50 to 80 per cent of last year's total.

A recent estimate by a competent authority in New Brunswick is that the cut in that province was likely to be down 50 million feet and perhaps more. Other reports in the east are practically the same as those in Ontario—diminished operations. A complete and instructive detailed review will be found in the market correspondence of the "Canada Lumberman," whose St. John representative deals with the situation in an illuminating manner.

The available labor for the camps is sufficient in some sections, but in others a great shortage of men is felt. It is predicted by those who claim to know, that with the cessation of war and the closing down of many munition plants, a large number of employees who were attracted by the high wages may fall back in their former occupations. In not a few cases these had to do with the cutting and handling of timber. If they revert to their old jobs the labor situation will be materially relieved at an early date.

United States

The stirring news from the front and the glorious celebrations in honor of the ushering in of Peace have been much more in evidence during the past few days than discussions on ordinary commercial affairs. There has been very little trading outside of government requirements and just what effect the cessation of hostilities abroad will have on the general situation it is difficult to predict. Some of the first effects will possibly be the elimination of building restrictions, the lifting of all embargoes and permits as fast as possible and a gradual reversion of business in its natural channels. The commandeering of lumber for war requisites of all kinds which has been in evidence for many months will now be over, as well as the making of shell boxes, gun carriages, gun stocks, trucks, war wagons, cantonments, etc. The shipbuilding industry will, however, proceed unabated, and, during the process of absorption and reconstruction, it is felt that matters will gradually readjust themselves and that no particular interest will in the long run suffer, although there may be several firms and manufacturers who sustain temporary jolts. A spirit of optimism prevails throughout the ranks and the general advice to all interests is "sit tight and don't rock the boat." Every foot of lumber will eventually be in demand and the prices prevailing to-day are likely to be sustained.

There is no legitimate reason for price-cutting at this juncture, especially in hardwoods, where stocks are below normal and in most cases badly broken.

The close of the war will materially benefit the labor situation and release a large number of men who had been drafted. Domestic business, which has been rather quiet, is sure to pick up, and structural operations, which fell off 30 per cent. in September, as compared with the same month a year ago, will soon become normal. The crop conditions have been good, and there has been a satisfactory yield of wheat, while there is an increased acreage sown for the coming year. Oak, ash and maple and other woods which have been used in army trucks and wagons will possibly revert to the furniture trade, which has been very quiet. It is estimated that hardwood mills have been operating on a 75 per cent. war production and just how long it will take for the pendulum to swing back from where it was two or three years ago is a matter of conjecture and perhaps trade circumstances. However, there is neither gloom nor despair in the country at this time in any business interest. The feeling is one of confidence and stability. The opinion generally prevails that every phase of the lumbering industry will come out all right, just as the country has emerged successfully from the war.

Commercial business in hardwoods is fair, but an increased demand from Government agencies has developed that more than makes up for the decline in commercial business, and that also serves to maintain prices. Apparently practically the entire demand is now of an essential character, and inquiries indicate that even the small consuming factories throughout the country are gradually getting into the essential class. Retailers in some sections have been buying a little stock, as rural building has held up fairly well; and indications are that there will be more barn, crib and even residence building on the farms this winter than during any previous season in years. But this does not hold true of all sections, and manufacturers must depend mostly on industrial business.

Government buying of Southern pine is as heavy as ever, and this is the sustaining factor of the market. The commercial market, however, is lethargic, and it is this commercial trade that the mills have depended on largely to clean up the odds and ends from the government movement. Consequently there is an accumulation of such grades at some mills, the disposition of which troubles the manufacturers greatly, especially as the transit car trade has been eliminated. Some government housing business, however, is in sight, and this may aid in cleaning up some of these accumulations. A strong feature of the trade is a strong demand from railroads for bridge and car material.

Great Britain

Now that the war is over the many restrictions under which the trade has been laboring for the last four years will gradually be relaxed. Just how long timber rationing and other regulations will continue it is impossible to tell. There is at the present writing more speculation on what will be the fate of the Kaiser than there is in the immediate outcome of foreign and domestic timber conditions. This country needs approximately half a million houses to meet adequately the

needs of the populace and house the millions of men who will return to civil life. This great problem all takes time to work out and just what the future will bring forth, how rapidly pre-war conditions will be reverted to and how quickly some of the handicaps holding sway for so long will be relaxed, will not be known for some days.

In the meantime there is a strong feeling that all timber and lumber that can be brought from the overseas Dominions should be utilized here in preference to imports from Norway, Sweden, Russia or other countries. It is only a question of the necessary bottoms, and just how quickly shipping facilities can be extended commercially, depends on how large an army of occupation must be left in continental Europe to ensure the permanency of peace, and upon other details of the terms to be carried out by the Allies.

No increased movement in trade can be reported. There is still considerable activity of business in regard to English-grown woods, a trade that develops, as the impossibility of supplying consumers' wants with the usual important hardwoods become more distinct. The business in these home-grown woods is, however, beset with difficulties. Excluding prime timber of certain varieties, which is urgently needed for special purposes, there appears to be a fairly abundant stock of

most descriptions; but these supplies are scattered in many directions, and the difficulties of obtaining them with the shortage of labor, the congestion of freightage, and the overburdened state of the mills when conversion is needed, render the business in these woods unsatisfactory in many respects. Notwithstanding the movement in this branch of the trade, it cannot be said that activity is general, business, speaking of the trade at large, being extremely dull.

No official statement in regard to the proposed rationing scheme has yet been made, and its publication appears to be as tardy as was the issue of the arrangements in regard to the soft woods. Nothing definite can be stated in respect to the lines upon which the Controller and his committee propose to work, but the matter, while interesting enough to a few in the trade, arouses little concern generally, it will not greatly alter the present position or add to the restricted business that is passing.

With respect to the home-grown market, there is nothing new to report. As far as can be ascertained, a fair amount of logs keep on coming along, and business generally is fairly good. The greatest difficulty is transport, and the railway companies are not yet in the position to "deliver the goods" as quickly as could be desired.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

How Ottawa Lumbermen View Trade Outlook

Reports from all sources indicated that the market was steady-ing itself and taking a further brace with the prospect of good or Al business being ahead, both in the United States and abroad. For the first time in many months, if not years, the local market could be properly termed an international one. So far as trade at Ottawa really went, there was an increase in the demand from the United States as compared with the latter part of October. Stocks began to move more freely and more inquiries came in. Permits and the embargo to the United States became easier and rail transportation continued good.

A feeling of optimism permeated certain cycles of the trade on account of increased shipments, but attention was drawn that too much credence should not be placed on this, on account of the season of navigation drawing to a close and, consequently, everyone was anxious to get their sold stocks from their yards or piling grounds.

Local retail trade remained dull. Lath and shingle were not in much demand, and the chief local demand for lumber was for repairs. Retailers and wholesalers generally took it as an accepted fact that little improvement could be expected from the domestic end. The approach of winter did not tend to warrant good business in the building lines. In most cases it was taken that the spring or summer months would be the earliest that a reflection of water war prices would begin to assert themselves. Mills in the Ottawa district were sold up to the saw and closed down, but the output was not hardly fifty per cent. of pre war days. Thus the term "sold up to the saw," as applied to 1914, could hardly be taken as a criterion in the full sense of the phrase.

The cessation of war activities with the woodworking plants caused considerable contemplation. No new shell box orders were heard of. The contracts now out are getting pretty well finished up, and with the heads of some well-informed plants it was a fifty-fifty proposition if any more box orders were to come from the Imperial Munitions Board.

If shell box orders be suddenly cut off at the present time some plants will have quite a time keeping their machines going the winter months. The cold fact that stares them in the face is "without shell box contracts what are we going to do?"

The cessation of shell box manufacture in Canada may hit some mills hard, as they had stock laid away in prospect of further orders. From what can be learned at Ottawa the chief prospect of demand for woodworking plants will be the manufacturing of sash, doors, flooring and interior fittings, for new military discharge depots and Canadian military hospitals and convalescent homes.

A good reflection as to what might be expected on the cessation of the war was given to the "Canada Lumberman" by C. Jackson Booth. It was his opinion that manufacturers would naturally look for European orders. He was doubtful, however, if lumber would get preference in ocean transportation. Food to the countries at war, he thought, would get priority. Then there was the supply from Norway and Sweden much closer than Canada to the lands needing lumber, and again he said there was Russia shipping from Riga the greatest lumber shipping port in the world. North and South

Carolina would also be American competitors to the European and Continental markets.

If Canada was to successfully meet such competition, he believed that there should be three times the stocks there are in Canada to-day. Another phase of the situation was that of whether or not the immense amount of lumber and timber the forestry battalions had been sawing in England and France would be available for reconstruction purposes. According to information at Ottawa only a small percentage of the lumber used in the war zone will be useful for rebuilding or re-establishment purposes. Present day conditions in Russia, Mr. Booth thought, were not such as to permit that country taking full advantage of its lumbering resources and figure as an active competitor in the Continental market. He thought that a year would be necessary before such a circumstance could come about. John R. Booth has on hand quite a considerable supply of stock sawn for the English market. Analyzing the situation there seemed really no grounds for any decline in the price of lumber now held in stock. Lumber, as was mentioned in these columns months ago, was one of the last commodities to advance when the war began, and by the same token the trade takes it through the season's of its war operations, it should be one of the last articles to decrease in price.

It works out this way, as the Canadian Newsprint Inquiry has partially shown. Logs cut in 1912-13 came to the mills in 1914. The increased cost was not felt until 1915-1916, but meanwhile the lumbermen were paying augmented wages and extra cost of camp supplies. The exalted disbursements for labor and food, due to war conditions, asserted themselves months later. Thus they have "carried on" through the years, and at least a period of twelve if not more months will be needed after the signing of peace to allow them to get back to normal operating expenses.

Though sales are not what they used to be and the prospect of pre-war demand brightening, it is not a question of getting the price, but having the stock to deliver, and the stock that came in 1915-16-17-18 is worth the cost of manufacture and a fair profit. With increased expense for labor and food the operators, however, have not on hand the stocks they carried in pre-war years and, consequently, when the European and Continental demand arises, (unless it is met from elsewhere) it will be a difficult matter for Canadian lumbermen, at the present time, to meet it.

Business in Montreal Has Slowed Down

Business in Montreal continues dull. For one thing, building is slowing down, the influenza epidemic is still to be reckoned with, and the Victory Loan has caused a certain amount of interruption. Then there is uneasiness as to the course of trade now that hostilities have ceased. There are those who believe that business will fall away, that the transition period will be of considerable duration, and that generally the conditions will be unfavorable. There are, however, others who decline to subscribe to this pessimistic picture, having faith in a large demand for all kinds of commodities, and an adaptation of commerce to new conditions.

Buying for American account is comparatively slow. Permits are

Milk at Every Meal—Drink Plenty

Let your men have plenty of milk at every meal. It is a simple matter for your cook to whip Klim into water and serve the best pasteurized separated milk.

Not only does this milk contain foods that cannot be obtained from any other source, but it gives the men added cause for contentment. They'll appreciate the presence of Klim on the mess table, and they'll relish its natural genuine flavor. They'll feel better for having it regularly, and they'll work better.

You can get Klim into camp with little trouble and expense. It bulks small, weighs little, and is cheaper than any other milk. You get the same quantity of milk solids in one ten-pound tin of Klim as is contained in forty one-pound tins of canned milk.

Klim can be shipped in with other food supplies—six ten-pound tins to a case.

Klim is genuine—the flavor proves it—Drink it.

Canada Food Control—Blanket No. 165

coming through fairly well, but the volume of trade has been cut down.

Unless the weather should prove unusually severe, the outlook for the transportation of lumber and other products during the winter is satisfactory. Warned by the shortage last season, the Canadian Railway War Board have added many engines and thousands of cars to the roads' equipment, besides which goods are being handled in a more rapid manner. The Board announces that heavy movements such as pulpwood, were expedited during the summer. The board have made working plans for the Canadian Northern, Canadian Pacific and Grand Trunk Pacific to co-operate in carrying traffic in the West should any one road find itself overburdened.

Exports by the lumber companies to Great Britain have now ceased for the season, while the Government has been rushing forward stock for aeroplanes and other war purposes.

The employment agencies are still endeavoring to secure men for the bush. A large contracting firm who are clearing bush for the construction of a dam in Ontario are paying \$85 per month.

St. John Foresees Ready Market and Good Prices

Not many changes have taken place in the St. John lumber market during the last four weeks, still a more optimistic feeling pervades the entire market caused by the general feeling that we are at the close of the war. It has been a long, hard pull for the lumber business at St. John, especially during the last twelve months, when the market and shipping conditions have been practically dead, and all the manufacturer could do was to borrow from the banks if possible, to keep his saws going, and pile the product in his yards, hoping that the future would find him a market at values which would pay him for all his worry.

At this writing no prices can be given as a guide either to the seller or buyer. No one seems disposed to buy at prices asked by manufacturers, and as the manufacturer cannot do profitable business at present quotations he is forced to keep his goods.

Just how long this condition will keep up remains to be seen, but the general impression is that we shall find a very ready market at good prices and that in the immediate future. There is this certainty about the price of lumber. It cannot be sold any lower for the next twelve months if the price of getting out the logs is to have any bearing upon the price of the sawn article. Certainly the experience of the present fall in the getting out of logs has been the most costly ever experienced. The supplies put in were very high, and wages are greater than ever. Men are scarce and very inefficient; sickness has caused delay and disorganization of all camps with overheads going on. This will most assuredly cause high-priced raw material and also a limited supply for 1919, in as far as this section of the country is concerned. Wood lots all over the country are being held at higher prices than ever and the owners will not risk cutting themselves, but prefer to sell outright, and the buyer take the risk at very high stumpages. Large quantities of logs are purchased from wood lots in this immediate section. Timber standing is getting very scarce over the St. John river territory. What limits are held by manufacturers have been extensively exploited and contain only inferior sized logs, all the big timber having been taken off years ago. This makes a much smaller log and takes many more of them to produce a thousand feet of the sawn article, adding as one can see largely to the cost, and producing much smaller and lower priced material. The manufacturing of these small logs is also very expensive. Taken altogether the timber produced at St. John no doubt is costing more than in many other localities, the driving, in many cases, coming 450 miles from the head of St. John until it reaches the city. The stocks to be wintered at St. John, in so far as the mills are concerned, are not heavy, and if there is any English business, and tonnage is given, it will not take long to clear up the stocks. Only three concerns have had a full season's cut, viz.: Steson Cutler Co., Murray & Gregory, Ltd., and Randolph & Baker, Ltd.

The St. John River Log Driving Company were forced to cease rafting operations about the last week in October as the epidemic raging in this section, had taken away many men. About 43 million feet were rafted during the season, with about three million feet left in the booms, which must be carried over until another year.

No prices for export deals or planks can be quoted as none are being bought or shipped.

Local business continues real good, with the factories filled with at least three months' work. Refuse lumber and lath are on slow demand. Spruce boards are on active requisition with very few available. A normal cut of logs is to be tried for on the St. John river by the St. John mill owners, but further up river and in Maine many mills are only getting from 30 to 50 per cent. of their normal cut. The mills at St. John will all close along about December 1st or as soon as the men forsake them to work on the liners at the opening of the winter port.

Close-up View of General Situation

How Leading Wholesale Lumberman Views the Present and Future Conditions of the Market

In reviewing conditions in the Ontario and Quebec markets, so far as hemlock and spruce are concerned a leading Ontario wholesaler writes the "Canada Lumberman," throwing out some interesting thoughts on the present situation and making some timely and candid comment. It is pointed out that hemlock and spruce lumber have increased in price approximately 60 to 75 per cent. over the 1913 figures and about 100 per cent over 1915 prices, making additional capital necessary to carry the same amount of lumber in stock as in 1913 and 1915. The building trade as a whole is quiet, and it is not necessary for the retail yards in most places to have as large stocks as formerly and, therefore, the majority of firms should be able to finance these two lines as easily as in recent years. Another branch of the trade in spruce is with the furniture factories in crating lumber. These plants are carrying, as a whole, the largest stock in this line that they ever had. The terms of sale on lumber are virtually the same as they have been in the past. Prices have been weakening in spruce and the demand apparently falling off so that, in the writer's opinion, as large a quantity is not required to be carried in stock as a year ago. Hemlock and spruce lumber is considerably scarcer than it was twelve months ago, but ordinary supplies are plentiful in the majority of cases.

In regard to labor conditions and conditions generally brought about by the war as affecting the cost of production in Eastern Canada, this would possibly average around \$5 per thousand for the year 1917 over 1916. The selling figure of lumber has advanced fully with the increased cost of production and, as a whole, has been inclined to go higher.

The output for 1918, as compared with that of 1917 in Eastern Canada for hemlock and spruce, has been only about 75 per cent. while there will possibly be a larger decrease during the coming winter. Woods operations will be 20 per cent. higher this winter than they were last. The value of orders on hand at the present, as compared with those on hand at this time in 1917 are about the same. Collections have been fully as good as last year owing largely to retail lumbermen now having to consider when they place orders, how are they going to pay for the stock. In the past, in buying lumber, their thoughts were rather would they have a use for it. During 1918 war contracts have been directly or indirectly responsible for at least 50 per cent of the trade being done in lumber. Wholesalers feel that these orders will not continue the same in the future as in the past. The buying power of the public, as compared with that of last year, is good and considerable building would have been done in rural districts had labor been obtainable. Retail dealers and wholesalers, as a whole, are understocked with lumber in comparison with the quantity carried before the war. In respect to conditions during the period of reconstruction and the cessation of hostilities a decline in the prices of lumber is anticipated. In fact a softening of quotations on some lines during the past month has been brought about by the influx of lumber from British Columbia. The embargo placed by the United States, the necessity of securing the permits on all shipments and the rather disturbing effects that have been occasioned by the end of the war discussion, the Victory Loan campaign, the outbreak of influenza, etc., have all tended to make business rather uncertain for the past few weeks and it will take some time to stabilize the situation.

The First Firm to Subscribe

The Dunlop Rubber Company were one of the first to announce a subscription to the Victory Loan. The Directors decided, after a brief discussion, to subscribe for one million dollars worth of the bonds. This subscription did not represent conversion of previous loans, nor did it include personal subscriptions by either directors or employees of the company. This announcement was telegraphed to the leading newspapers all over the country and was the first large one to appear anywhere in Canada. The Dunlop factory and office staff also got their Honor Flag for obtaining the subscription percentage set by the Victory Loan Committee.

Here was one of the most touching things in connection with the employees' campaign—the first subscription came from Pte. W. C. Dies, formerly head of Dunlop Shipping Department, who is probably the worst wounded man that ever returned to Canada. Private Dies lost both eyes and his right hand at Vimy Ridge and was awarded the Military Cross. When he heard that the employees' subscription list was open he phoned the company and asked to have his name put down for \$200.00.

The Fraser-Brace Shipyards, Ltd., have been incorporated with head office at Montreal, P.Q., and capital stock of \$750,000.

New Secretary of Western Retail Lumbermen

Fred H. Lamar, Winnipeg.

faithfully. No doubt in his larger sphere of activity he will bring to bear upon his new duties the same perseverance and energy. George A. Tompte, formerly connected with the Empire Sash and Door Company, Winnipeg, has been appointed to take the position vacated by Mr. Lamar, the new secretary of the Western Retail Lumbermen's Association.

N. G. Neill, who for some years past has been secretary of the Western Retail Lumbermen's Association, with headquarters in Winnipeg, has resigned to take a position as manager of the Employers Association of British Columbia. This is an organization composed of the leading employers of labor of that province and as it embraces all industries, Mr. Neill will still be in close touch with the lumbering interests. His successor as secretary of the Western Retail Lumbermen's Association is Fred H. Lamar, who is widely known to the trade. Mr. Lamar has had an extended experience with the Revelstoke Saw Mills Company, Calgary, the Northern Pacific Lumber Company, of Vancouver, and other concerns. Two years ago he was appointed secretary of the Retail Lumbermen's Purchasing Agency, which post he has filled ably and

Merging of the Hardwood Associations

The movement inaugurated at Louisville, Ky., last Saturday to bring about an amalgamation of the Hardwood Manufacturers' Associations of the United States and the American Hardwood Manufacturers' Association, and thus create one big, effective organization representing the manufacturers of hardwood is one worthy of the commendation and hearty approval of every such manufacturer. It is stated that one of the objects of this amalgamation is to bring about closer co-operation in dealing with the government, says the "American Lumberman."

While the government is encouraging industries to organize associations, coordinated effort, rather than multiplicity and diversity of effort, is sought, and while the hardwood industry has been pretty thoroughly organized it has been through a number of associations—some working at cross purposes—rather than through a single big organization that could speak for the entire industry.

In agreeing to submerge their organization and come into the American Hardwood Manufacturers' Association members of the Hardwood Manufacturers' Association of the United States have shown a spirit of concession and a broadness of vision that are commendable, indeed, and this action should go far toward winning the confidence of manufacturers generally in the high purposes of the proposed big organization.

Through this organization, with its membership of 500 and a potential membership thrice as great, the industry can be placed on a high level, with standardized methods of manufacture, standardized cost and accounting systems, sales reports, etc., all of which will redound to the well being of the manufacturers and make the industry more profitable.

What Forest Fires Have Cost B.C.

The Commission of Conservation of British Columbia has just completed an exhaustive investigation, covering a period of three years, into the forest resources of British Columbia. It shows that the total stand of saw lumber and pulpwood material in British Columbia is 366,000,000,000 board feet.

The report discloses the fact that of the total land area of the province, 355,855 square miles is incapable of producing forests of commercial value. About 145,000 square miles lie above the merchantable timber line, and on 55,000 square miles the soil is either too rocky or wet, or the forests have been so completely destroyed by fire that there is no hope for the natural re-establishment of forest conditions for centuries to come.

Of the remaining 165,855 square miles which is capable of producing forests, only about 28,000 square miles carries sufficient timber to be classed as statutory timber land. The timber on about 100,000 square miles, or two-thirds of the area once forested, has been totally destroyed by fire, and in more than half of the remaining 55,855 square miles has been seriously damaged. Using the timber still standing as

a basis, it is estimated that the province has lost through forest fires, at least 665,000,000,000 feet board measure.

"When one considers," says the report, "that the total stand of new material in the whole Dominion probably does not greatly exceed this amount now, the seriousness of the loss, which can be attributed very largely to public carelessness becomes apparent."

Plenty of Airplane Spruce in Sight

Four and a half million feet of airplane spruce were shipped during September under the Imperial Munition Board's programme, now being carried out in northern B. C. This establishes a record for the camps. One and a half million feet of fir were also sent away for special work. The fear frequently expressed that airplane spruce cutting would soon strip the spruce forests of B. C. of their choicest timbers is erroneous, according to a statement recently made in the United States by F. R. Pendleton, superintendent of production for the Imperial Munitions Board, Aeronautical Supply Department. Mr. Pendleton declares that there is sufficient supply of spruce to keep up the present rate of production for two years and that cruisers are still out searching the province for further stands.

Some Protection for Timber Investor

Protection for the investor who was promised 100 per cent. profit in a timber deal, or the return of his money and 6 per cent. interest in the event of a failure to receive the 100 per cent. dividend, was accorded by a judgment of the Supreme Court in Ottawa. Frederic Lapointe, Joseph Landry and Raoul Vachon were condemned, severally and jointly, to pay to Michel Metivier the sum of \$1,000, subscribed by him to defendants on May 15, 1914, on their guaranty to return the money to him in default of 100 per cent dividend. It was established that the defendants used the circular and receipt covering the guaranty in connection with the purchase of 1,200 square miles of timber limits in Labrador. The judgment also carried interest from the date of demand and cost of the action. It was established that sixteen others who were in the syndicate were not liable.

New Management of Eastern Company

The A. H. Richardson Lumber Company, a new corporation of Boston, with many connections in Canada, has recently changed management owing to the untimely decease of its former treasurer and manager, Alonza H. Richardson, after a long illness, although up to a week of his death he regularly attended to his duties, showing remarkable pluck and a determination not to give up until the final hour had come.

It was only last August that the president of the Richardson Lumber Company, Geo. H. Prouty, former Governor of Vermont, met a sudden death in an automobile accident near Lennoxville, Quebec. Both Mr. Prouty and Mr. Richardson had been buying spruce, hemlock, lath, cedar and other Canadian lumber for a number of years, their transactions being principally made with mills and lumbermen of Quebec and the Maritime Provinces.

The only surviving member of the old organization is E. A. Cutler, vice-president, who entered the lumber business with Mr. Richardson in 1882; being employed by Andrew F. Leatherbee, an old Boston lumber retailer. At a later period they entered partnership along with George H. Prouty and have continued to do a healthy business since that time. As Mr. Richardson's only heir was his brother, Daniel C. Richardson, the latter is the natural successor to the management and treasurer of the business. Daniel Richardson has been conducting a large retail lumber business in Mansfield, Mass., under the name of the Mansfield Lumber Company, and will continue to conduct the affairs of both firms.

Rapid Building of Timber Cofferdam

In the construction of the Government lock and dam at Troy, N. Y., it was necessary to finish the west one-half of the concrete dam during one working season. In order to expedite this work a special method was selected for the rapid building of the frame work of the 1,000 feet long wooden cofferdam, which is described in "Engineering and Contracting." This frame work consisted of two horizontal and parallel sets of timber spaced about 20 feet apart and tied across with iron rods and struts. The frame resembled two parallel board fences with a distance between the fence posts of about 21 feet. In building two corresponding sets of timbers were placed on a pair of cradles laid flat on a barge. The two cradles were then raised, the tie-rods were put in, and the timbers bolted to the portion just completed. The new section was then picked up by derrick boats and slid part way over the side of the barge until there was room enough to lay down another set of timbers on the cradles, which were again raised up when ready and connections made with the preceding section. Later these frames were lined with sheet piles.

CANADIAN WOOD PULP

**We are the
LARGEST
BRITISH
IMPORTERS
of Canadian
WOOD
PULP**

Canadian Wood Pulp is in great demand to-day, and every timber man should take advantage of the opportunity to add this profit to his business. A small Kraft Soda Mill is inexpensive, and will handle all the wood waste, slabs, bottoms, tops, etc., around the mill or yard. You can dispose of any quantity at good prices, or on long-term contracts, if desired. The previous sources of supply for the business have been cut off almost entirely, and Canadian business men can reap the benefit with little risk or investment.

The Provincial Paper Mills Company who operate plants at Georgetown and Thorold and at Millroches, report that they have a plentiful supply of pulpwood on hand for the coming season.

C. W. Wilkinson, managing director of the Union Lumber Company, Toronto, was appointed a member of the directorate of the National Hockey Association at the annual meeting held in Toronto.

Nébergall, Cook Co., of Parry Sound, have sold out their business to Mark Rogers, of Huntsville, who will continue the saw mill and planing business. Mr. R. F. Cook remains with the new proprietor.

The City Council of St. Catharines, Ont., has been requested to apply for \$80,000 from the Ontario Government for building purposes, the city to supply \$20,000, making a total of \$100,000 to be available at 5 per cent. for erection of homes by working men.

The value of the building permits in Toronto during the first ten months of 1918 were \$7,533,010, as against \$6,375,079 for the corresponding period last year. The number of permits issued, however, is not as large, being only 417 in 1918, as compared with 513 in 1917.

Word has been received in Toronto that it is possible the Canadian Forestry Corps will shortly extend its operations to Ireland. An officer of the corps reports that there are areas suitable for operations. During one month the corps handled over 35,000 tons of material in Great Britain alone.

J. R. Booth's depot camp in the Northern Ontario district produced a thousand bags of potatoes, according to reports received in Ottawa. The employees of the camp worked during the spare hours to produce as many vegetables as possible, and the officers of the firm are very proud of the splendid potato yield.

The new slasher mill of the Port Arthur Pulp and Paper mill has been completed at Port Arthur, Ont. An addition to the bleaching plant has been finished, and extra equipment installed. The company is now employing over 200 men and considering that it has been in operation only about a year the results obtained have been most encouraging.

The house of John Gross of Welland, Ont., was recently reshingled. There is nothing remarkable about this fact, except that it is thirty years since the roof was touched and then it was covered with B. C. XXX red cedar shingles, being one of the first buildings in that locality to make use of B. C. shingles, which gave such long and satisfactory service.

The Thorold Planing Mills Co. of Thorold, Ont., at the head of which are A. Wills and W. Mitchell, report a busy season and have made arrangements for the opening of a retail lumber yard in St. Catharines. They have secured a favorable site on Chester Ave., near Queenston street, on the line of the N. S. and T. railway. The step just taken has been owing to the increasing business which the Thorold Planing Mills have been doing in St. Catharines during the past few years.

In the Second Appellate Division at Osgoode Hall, Toronto, the dispute between the Gray Lumber Company and the Green Lumber Company was heard. In 1913 the Gray Lumber Company shipped to the State of Mississippi some lumber which arrived too late for use, and the Green Lumber Company refused it. The court decided that the Green Lumber Company was entitled to get the lumber, and allowed damages and fixed the balance due to the Gray Lumber Co. at about \$450.

Good progress is being made on the Kipawa pulp plant of the Riordon Pulp & Paper Company at Temiskaming, P. Q. The contractors are the Geo. A. Fuller Company, who are employing about 500 men, and intend increasing the force to 1,000. It is expected that the enterprise will be completed and in operation early next summer. Very high wages are being offered carpenters and laborers, the former being given 65c an hour and the latter 48c. A hospital and staff have been established at Temiskaming and every convenience provided for the comfort and welfare of the men.

Eastern Canada

The directors of the Montreal Builders' Exchange have passed a resolution of sympathy with the family of the late Mr. Fred S. Macfarlane, president of R. Macfarlane & Co., Ltd., Montreal.

The Wayagamack Pulp & Paper Company, Ltd., Wayagamack Island, Three Rivers, P. Q., have plans in progress for the construction of reinforced concrete tanks to be used in the manufacture of wood pulp.

The Laurentide Company, Grand Mere, P. Q., has applied to the Provincial Government for a permit to erect a bridge. Plans covering the site and structure are being exhibited at Registry Offices in Three Rivers and St. Genevieve de Batiscan, P. Q.

The new pulp plant of Fraser Companies, Ltd., at Edmundston, N. B., has started turning out pulp, and shipments will shortly be made. The new traffic bridge over the Madawaska River, which has been built in connection with the dam for the Fraser power house, has also been completed.

Under the charter of the Stearns Lumber Company, power is acquired to carry on in all its branches a lumber, timber and pulpwood business; to manufacture lumber of all kinds; to acquire timber lands, and to own and operate, saw, pulp and paper mills. The capital stock is \$20,000, with the head office in Montreal.

A vacant building, which had belonged to Guertin & Boucher, sash and door manufacturers, 410 Pathenais St., Montreal, was destroyed by fire recently. Another blaze broke out in the McLaren Lumber yard on St. Catharine St. East and Pathenais and Dufresne Streets, at the same time. After a long fight the flames were finally distinguished.

A charter has been granted to the Pulp and Paper Mills Supply Co. with a capital stock of \$150,000 and head offices in Montreal. The new company is empowered to manufacture, import, export, buy, sell and in goods of all

kinds, either as principal agents or brokers. Among the incorporators are Thos. J. Coulter, Wm. S. Jones, P. W. Peacock and R. H. Dare of Montreal.

The New Brunswick department of lands and mines was asked recently to send assistance to three camps of the Bathurst Lumber Company on the head waters of the Nepisiquit river. The crews were down with the disease. Chief Forester G. H. Prince communicated with the minister of health with regard to the matter, and medical men and the necessary hospital supplies were sent. The situation has now greatly improved.

The Matane Lumber and Development Company has been incorporated with a capital stock of \$2,000,000, and the head office in Montreal, to carry on lumbering generally; to manufacture and deal in ground wood and chemical pulp; to operate lumber mills and timber limits; and to acquire in the counties of Matane, Rimouski, Gaspé and Bonaventure, P. Q., concessions for water powers and the generation, distribution, supply, etc., of electric power.

Western Canada

The recently incorporated South Vancouver Shingle Company will take over the business and plant of the Riverside Shingle Company at the foot of Campbell Avenue, Vancouver.

The Leslie Lumber Company, Steveston, B.C., are contemplating the erection of lumber sheds to replace the ones recently destroyed by fire. The cost of rebuilding will be about \$8,500.

The Lumbermen's Trust Corporation of Portland, Oregon, again entered the Canadian municipal market last week when it purchased New Westminster bonds to the extent of \$100,000 in addition to the placing of an option for two months on a further \$70,000.

Sealed tenders are being received by the Minister of Lands for B. C., until the 22nd day of November, 1918, for the purchase of License X95 to cut 1,217,000 feet of fir, tamarack, yellow pine and spruce, and 14,000 fir and tamarack ties on L. 6245, Sand Creek, near Jaffray, Kootenay District. Two years will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for B. C. until the 28th day of December, 1918, for the purchase of License X1360, to cut 25,929,000 feet of fir, hemlock, cedar, spruce, white pine and balsam, on Lots 1165, 1167 and adjacent land, Klancane River Nimpkish Lake, Rupert District. Four years will be allowed for the removal of the timber.

The new spruce sawmill of the B. C. Box Co., Ltd., Vancouver, which is located on the North Arm of the Fraser, just east of South Vancouver boundary line, is electrically driven and has a daily capacity of about 25,000 feet. The clear lumber is being taken by the Imperial Munitions Board, the balance being delivered to the Vancouver factory by motor truck, pending the completion of a railway switch into the mill premises.

The Deep Cove Logging Co., which operates on the North Arm of Burrard Inlet, makes use of a 65 horse-power Holt caterpillar tractor to haul logs. Two trucks are used, having 16-inch tires and a capacity of 10,000 feet. There is a maximum road grade of 15 per cent. over which the caterpillar moves the load at the rate of 2½ miles an hour. A log 77 feet long, with an 18-inch top, was yarded on a straight pull without any difficulty.

The new stretch of logging railroad constructed last fall and winter by the Brooks-Scanlon-O'Brien Co., Ltd., of Stillwater, to tap new limits in Horse Shoe Lake district, is now in commission. Grades on the old section were cut down, and with new and more powerful locomotives in service very heavy log trains are now being moved. Extensive improvements were also carried out at the unloading dock and booming grounds at tidewater.

Plans are under way to extend the mills of Cedar Mills, Limited, at Lynn Valley, B. C. The present plant at Hatzic, B.C., will be removed to Lynn Valley and extensive additions made. The company control 160 million feet cedar in Lynn Valley, and combined shingle and lumber cut will amount to 75 million feet per day. Plans include an addition to dry kilns, installation of a high lead system with a high lead 37 ton donkey engine, new feed works, new edger and a comprehensive general remodelling.

Construction has started on the new sulphite pulp plant that is being erected at Beaver Cove, Albert Bay. The output will be 200 tons daily. W. H. White of Boyne City, Mich., is interested in the industry, and the company control 80,000 acres, upon which it is estimated there is five billion feet of standing timber, two million of which can be used for the manufacture of pulp. The company will also undertake the manufacture of tannic acid from hemlock bark. This is the pioneer venture in this line for B. C., and it is thought the industry is capable of great expansion in view of the immense timber resources of the province. Sulphite pulp production in 1916 was slightly over 14,000 tons, and was practically trebled last year.

Timely Work on Belt Conveyers

The Jeffrey Manufacturing Company have recently issued a comprehensive and admirably illustrated new catalogue entitled Jeffrey's Belt Conveyers. The book is one that should prove of value to every manufacturer, engineer or contractor, interested in saving time, labor and expense in time, labor and materials. Catalogue No. 175 is a complete text book upon the subject of belt conveyers, and the matter is presented in a manner both timely and edifying.

Fire Started from the Dry Kiln

For the second time in thirteen years the plant of the Canada Carriage Company, one of the largest labor employing concerns in Brockville, was destroyed by fire recently. Apart from few storehouses and the main offices only the charred walls remain standing. The loss is estimated at \$500,000, fully covered by insurance in American Lloyds. The plant was owned by the Canadian Factories, Limited. The blaze is supposed to have started in the dry kiln in the wood-working shop adjoining.

The Cut This Winter Will Be Small

A general survey of conditions in the lumber mills and camps at the present time is of particular interest in view of the closing of the sawing season and the starting up at full force of employment in the bush. Everywhere one hears of the growing scarcity and inefficiency of woods labor and the prediction that the cut this winter will be considerably less than it was a year ago, when from reports received by the "Canada Lumberman" for its "Statistical Number," issued in February last, it was conservatively estimated that the falling off in log production would run all the way from 15 to 25 per cent. in Ontario and Quebec, and even higher in the Maritime Provinces.

The last issue of the "Labour Gazette," Ottawa, contains the following interesting review of lumbering conditions from coast to coast: Charlottetown reported that the saw and shingle mills were quiet. St. John reported the sawmills well employed, and that the lumber mill at Grand Bay started operations for the first time this year. Newcastle reported that with one exception all the mills were still busy. It was anticipated that with the large amount of lumber now on hand and the scarcity of men for the woods that operations would be curtailed this winter. Fredericton reported that most of the lumber mills were still running, but that the men were preparing to go to the lumber camps. Quebec reported great difficulty in securing sufficient men for the lumber camps, although \$80,00 a month and board was being offered. Sherbrooke reported that the saw and shingle mills were active. Peterborough reported the lumber industry was quiet owing to the shortage of men and that most of the lumber used was being shipped in from other points. Sault Ste. Marie reported that owing to the scarcity of skilled men lumbering operations would be carried out on a small scale this season, the operators claiming that with inexperienced men and high wages they would be forced to produce at a loss. The lumber mills at Prince Albert laid off their night shift and were advertising for 5,000 men for the winter camps. Nelson reported that the lumber mills of the district were quiet. At New Westminster the sawmills were very busy, but the shingle mills were held back by a shortage of cars. The logging camps in the Nanaimo district were absorbing all the labour available. The sawmills were working full time, but employment in the shingle mills was rather unsteady. Victoria reported the lumber industry working to capacity, with a large demand for lumber for shipbuilding and aeroplane manufacture.

Suit Over Lumber Left on Siding

Can a common carrier contract itself out of liability for its own fault or negligence or for that of its servants and employees? This is the main issue in the case of the Canadian Northern Quebec Railway Company, and the Argenteuil Lumber Company. The railway company appealed to the Court of Appeal, Montreal, from a judgment of the Court of Review, reversing the judgment of Mr. Justice Coderre, and condemning appellant to pay \$11,173 damages to the lumber company. Under an agreement between the parties, the lumber company supplied material for a siding to be built by the railway company on the lumber company's property at Morin Heights. The siding was constructed on a slight grade and some months afterwards the railway company had delivered two car loads of machinery to the lumber company at the siding. While these cars were standing other railway trucks collided with the cars and did damage to the amount awarded by the Court of Review. The question in appeal is whether the railway company can be held legally liable in damages under the siding agreement between the parties.

Appellant, in denying liability, relied particularly on Clause 10 of the agreement professing to indemnify the railway company against damages resulting from using the siding.

In reply it was argued that the fact that the agreement had not received the approval of the Railway Commissioners was sufficient to estop appellant from denying liability thereunder.

In any event, even if the Railway Board's approval was not necessary, it was urged that a common carrier could not contract itself out of liability for its own fault or negligence or for that of its employees. Judgment was reserved.

Just From Force of Habit

Two different people who know the young woman personally have assured us that the tale is true, so here it is in print:

The young woman is employed at the telephone exchange of a local lumber company. One evening, after a hard day at the switchboard, she stayed up rather late, and, as a result, had to snatch a few winks of sleep while coming down on the street car the next morning. As she was nodding, another passenger rang the bell for the next stop. At the sound of the bell the drowsy one sat up straight and loudly announced:

"Singleterry Lumber Company."—Cleveland Plain Dealer.

The Solution for Your Sander Problem

*As installed in plant of
BENJAMIN RYBAKOFF
New York City*

No. 401 Roll Feed Sander

This is the perfected Roll-Feed Sander.

It has vibrationless cast-in-one-piece base. Upper frame has rigid bearing on the base. Adjustments quickly and easily made. Instantaneous Feed Change device gives operator choice of three rates of speed. Reverse feed exclusive Yates feature. Oscillating mechanism simple and durable. Equipped with Spiral Drums with automatic take-ups, the only continuous cutting Sander Drums.

Our sander book gives full details and sectional views of this machine. Write for it. Free on request

—the unproductive scrap heap

Is your mill up-to-date or are you still content to allow that pile of sawdust, shavings, ends, slabs, etc., to prove a burden instead of big source of income? With the big prices which prevail for wood pulp and those chemicals distilled from waste wood it will pay you to consider installing the necessary plant to make the scrap heap productive—and then write us! We have specialized in chemical-producing plant for over 75 years and have installations in all parts of the world.

"Brazel Patent" SNOW PLOWS

Known in every
Camp from the
Atlantic to the
Pacific as the
most satisfac-
tory Snow Plow
made.

**Combination
Model, Lumber-
man's Snow
Plow, can be
used either with
or without Rut
Cutter.**

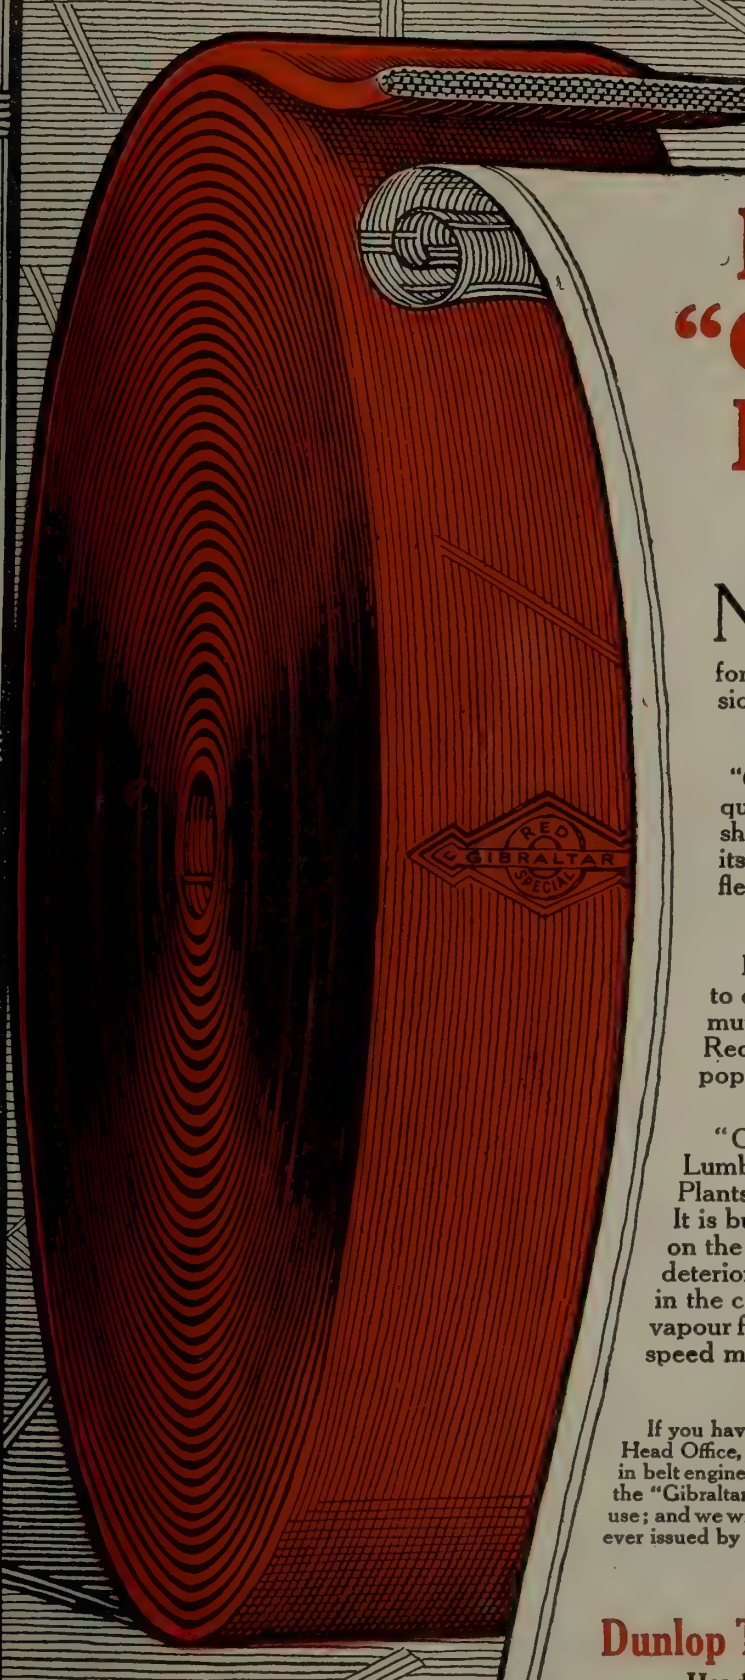

One man to operate.. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9 ft. wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. BRAZEL PLOWS cut 6 in. wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure heaps from an ice road, leaving a clean roadbed. Roll up and push entirely away from the road, 12 inches of loose snow each time the plow passes over.

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

"The Original Red Rubber Belt."

"SUGGESTIONS FOR THE LUMBERMEN"

From all over Canada and the regions beyond come enquiries for our booklet "Suggestions for the Lumberman." From the United States, from England, and from France are coming urgent requests to send one or more copies of this booklet. It seems to be filling a real need, as it gives much information that has not been previously assembled in such a convenient form.

There is a copy of this booklet for you. If you have not received it yet drop us a card and you will get it by return mail. You will be well repaid for the small outlay of time and postage expended in procuring your copy, and the information contained therein may save you hundreds and hundreds of dollars.

"How to Skid Your Logs with Fewer Men and at Less Cost"; "How to Load Your Logs Easier, Quicker and Cheaper"; How to Move Your Logging Cars Along the Track Easily and Quickly to Expedite Loading"; "How to Gather in All the Logs from Your Ground in the Simplest Possible Way, and at the Least Expenditure of Men and Money." All this information and much more, is contained in this Booklet.

If you have received your copy, have you thoroughly digested it?

Have you arranged for your Skidding and Loading Machinery for next season? It is time to act now.

Marsh Engineering Works, Limited Established 1846

Belleville, Ontario

When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request.

ADDRESS

Ontario Wind Engine and Pump Company, Ltd.

TORONTO, ONTARIO

Branches: Montreal, Winnipeg, Regina, Calgary

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

There is Nothing Difficult —

in the making of the fine, narrow, or the mammoth wide Bandsaws *if* you possess the knowledge, the steel and the facilities.

We have been manufacturing all types of saws for many years, our experience is broad and practical, we have been making Disston Crucible Steel since 1855 and our equipment is unequalled.

These are the reasons why Disston Saws are profit producers for you.

THESE TWO DISSTON SAWS ARE 60 FEET LONG, 18 INCHES WIDE, 11 GAUGE, 3 INCH SPACE TEETH, EACH WEIGHING 434 1/2 POUNDS

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of

Chapman Double Ball Bearings

—IN—

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

"Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

TRIMMER LINK-BELT

There is scarcely a mill requirement for Link-Belt, however special, that cannot be perfectly met with our standard links and attachments. The above illustration shows our standard "H" class Link-Belt with "A" attachments for saw feeding purposes. Write us about your special requirements. Ask for Book No. 260. Genuine Link-Belt has this mark  on every link.

Bruising Drives

If you have a constant trouble-maker drive don't delay in learning about SparOak—that double service belt.

SparOak not only grips the pulley at high speed with fluctuating loads, but stands the mauling of hard service conditions. For a whole class of belting troubles it is the answer.

PERFORMANCE

PERFORMANCE is what really shows the true worth of any machine. In February 1916 England appealed to Canada for help in producing timber for war needs,

That Canada's response took a practical form is evidenced by the fact that in April the first draft of the Canadian Forestry Corps landed in England, and in May two more drafts fully equipped with WATEROUS Machinery followed.

This Machinery, designed and built to cut from 15,000 to 20,000 ft. per day, has turned out as much as 58,000 ft. in 10 hours.

A Waterous Outfit in the Jura Mountains, France

That this is not an isolated case, or the record of one mill, is shown by the many letters we have received from different parts of England and France, of which the following is an extract :

" . . . I have many WATEROUS mills running under me, each mill designed to fit into a different location, but all doing equally good work.

"I have no complaint to make of the WATEROUS Mills, in fact, I prefer them to anything I have been able to secure up to the present time, and I have many different kinds of machinery with which to do our work.

"To illustrate: I believe all records of the Forestry Corps, either in England or France, rest with ourselves in the Jura; one of our Company's output a few days ago was 51,300 ft. for one shift of 10 hours, cutting 3 x 9 plank. A mill of this kind that can put over a cut like the above I believe you can look upon as a fairly successful outfit. To sum up, with the Waterous machinery that I have running in the Jura I feel confident that I can out cut any combination that is now running in the Forestry Corps. . . ."

What we have done for the Forestry Corps we can do for you.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 85c per lb.; West of Fort William, 88c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00

worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.

THE PROBLEMS OF PEACE

All the money borrowed by the Government on the last Victory Loan will be spent in Canada and will stabilize business conditions.

We will rapidly shift from a War to a Peace basis. The Dominion and Provincial Governments will start many much needed public works which will absorb most of the labor now employed on war work.

We need many new homes and thousands of old ones will have to be fixed up. Farmers will build new barns and repair the old.

Be Optimistic.

Believe in Canada.

Help Make Canada a Land of Prosperity and Opportunity.

Keep Your Stocks In Good Shape.

We must take our part in the reconstruction of Europe. Canadian lumber will be required in large quantities which will keep the local supply low for some years to come.

Retail lumber dealers should have many years of big business ahead.

To enjoy your full share of this prosperity, you must keep your stocks in good shape. Do not have to say "Out of Stock" on any enquiry for lumber.

SAW MILL MACHINERY

Firstbrook Bros. Limited

Having decided to discontinue saw mill operations at Penetang have the following machinery for sale. This machinery is all in operating condition and is open for inspection at Penetang, Ont.

Mill Machinery

Extra heavy log haul-up works with inch round and flat chain, 128 ft. centres.

2—Waterous log unloaders or kickers, 3 arms, 10 in. cylinders.

1—Waterous log loader, 3 arms, 10-in. cylinders.

1—Waterous right-hand double cutting band mill, 11 in. saws, 8 ft. wheel, with 3-block carriage; 24 in. opening; Payette set works and dogs; 8 in. x 36 ft. steam feed.

1—Waterous double edger for 20-inch saws; lever shifter.

1—Payette double edger for 18-in. saws, lever shifter.

48—live rolls about 8 ft. long by 10 in. dia.; extra heavy, sprocket drive.

20—High cars with roller tops, 24 in. heavy wheels on 3 in. axles, standard gauge.

1—Merston 4 saw gang resaw, takes squared cants or just one face, ideal machine to cut small logs and centres of large after good has been taken off.

1—Payette picket machine, made specially for shade roller stock, will feed pieces 16 in. long, also sorting table with chain top.

1—Rogers Iron Works circular resaw for making box lumber from slabs; fool-proof machine.

1—Payette edger for box and short stock.

1—Rogers twin circular or tie maker.

1—Payette lath bolter and lath machine.

1—Pair lath trimmers.

1—Picket trimmer (bunch trim).

Conveyor drives and chains.

Pulleys, gears, heavy line shafting and countershafting with bearings.

Send us your requirements.

We have a large stock of double and triple leather belting in widths from 10 in. to 46 in.

Power House Equipment

3—Return Tubular Boilers, Goldie McCulloch make, 66 x 16, Dutch oven settings, 85 lbs. steam allowance Ontario Government.

Breeching and smoke stack for above boilers, 50 in. dia., newly painted, 600 ft. new 1/4-in. guy and plate for brick pier.

1—Northey boiler feed pump, outside packed, 8 in. x 5 in. x 12 in., for 3 in. suction pipe.

1—Pair Polson "Brown" type engines, coupled on quarters, 22 in. x 50 in., with 16 ft. x 48 in. belt, balance wheel. Excellent engines.

1—Pair American feed water heaters for above engines; 10 in., copper coils.

Filing Equipment

1—Waterous band saw grinder for 6 in. saws.

1—Baldwin retoothing for band saws.

1—Wm. Hamilton band saw shear, 12".

2—Reversible saw levelling blocks.

2—Chilled band saw anvils.

Hanchet band saw swages; Crescent circular saw swages; shapers and dressers.

Yard Equipment

Booms and boom chains, 1/2, 3/4 & 1. Winches and other mill supplies.

Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Standing Timber

in Large or Small Blocks

FOR SALE

THE undersigned offer for sale, in large or small blocks all their remaining timber lands and town property situated in the town of Parry Sound, Ont.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, McConkey, Mills, Allen, Secord, Falconbridge and Street.

Special Prices

Special bargains in the Townships of Falconbridge and Street for small mills.

The Parry Sound Lumber Co.
26 Ernest Ave. Limited
Toronto, Canada

Heavy Fir Dimension

Is Our Particular Specialty

The Heavier it is the Better we like it

**We Dress from 1 to 4 Sides up to
16-in. and 20-in., 60-ft.**

Our grade is positively right, and prices will please

The demand for Hardwood Lumber will undoubtedly be extremely large as soon as business gets under way on a peace basis.

Production is about 50 per cent. of normal and will remain so for a year or two at least.

few months of normal business will take every stick of dry hardwoods in the market.

This lumber is here in our Buffalo yard—ready for immediate shipment. Why not let us send some of it to you now while (in most cases) permits can be obtained? Upon what can we quote you?

Would also appreciate your inquiries for Ash, Basswood, Gum, Hickory, Quartered Oak, Poplar (or Whitewood) and Sound Beech and Maple Planking.

Your enquiries will receive our careful attention.

Blakeslee, Perrin & Darling

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38 Toronto, December 1, 1918 No. 2

Making the Most of Every Opportunity in Lumber Market

It is gratifying to learn that the Canadian Lumbermen's Association is taking aggressive action in the matter of placing the industry on a firm peace footing. All the conditions surrounding manufacturing, sale and distribution will be radically changed owing to the cessation of hostilities in Europe, and many new fields for development will be exploited. Not only will there be the increased domestic consumption of lumber, but there is also trade with the United Kingdom and the devastated countries of Europe, as well as ocean carriage, facilities and rates of exchange, removal of embargoes, terms of credit and other momentous matters to consider. Columns have been written upon the splendid openings that present themselves in Great Britain and the European countries for the various lines of timber. There are only six sources of supply, Norway, Sweden, Finland, Russia, Canada and the United States. Russia is so torn asunder internally by revolution and Bolshevism that she is in no position to cater to the timber requirements of other lands. So far as Great Britain is concerned there is every disposition to favor her dominions beyond the seas who have played such historic part in the triumphant struggle for liberty, justice and democracy. All things being considered a preference will likely be given to Canada, and while sentiment does not play a part in ordinary business affairs, still, when matters weigh equally, favors are naturally extended to those nearest us or whose work and worth are held in grateful remembrance and appreciation.

While the Canadian Lumbermen's Association is doing everything in its power to foster both domestic and foreign trade and to ascertain just exactly what kinds, sizes and quantities of timber will be required for foreign consumption, it might be well for the Federal Government in its efforts to direct successful re-establishment and readjustment to proceed with public works in the various centres, construction on which was held up by the war. It is easy to declare that each great industry should take a lead and do so and so, but if the

Federal authorities point the way not only by proceeding with undertakings of a desirable character at home, but grant the necessary credit to Belgium, France and other countries, so that they may proceed to undo the damage that has been wrought by the war, a period of expansion and activity is sure to develop.

Now is not the time to sit down to speculate and theorize as to what will be the price of lumber, but rather is it the moment for action to shape our course so that the needs overseas can be adequately met and to co-operate in seeing that Canada secures her just proportion of the business that will be offered. There will, after a few months, be renewed activity in the furniture, piano, musical instrument and automobile and other home industries which will consume a large quantity of wood, while hemlock, spruce and pine will find every available outlet in building operations. One cannot help but feel that while there may be some penalties to pay in the way of perhaps a short-lived depression in certain lines, that everything augurs well for a substantial future of the lumber business. Stocks of mills were possibly never so low as they are at present. The cut next summer will be smaller and yet the uses of lumber will be greater and wider with the active structural campaign, the industrial expansion, the foreign demand and the shipbuilding programme. How there can be any permanent setback is more than can be described at the present juncture. The termination of hostilities is bound to prove a tremendous stimulus to the demand of products of the forest and the only displacement will be during the time required to revert to channels in which business ran smoothly before 1914. Every consideration should be given to the best method of developing the export trade and bringing about the closest co-operation between the lumber interests of the Dominion and foreign requirements so that senseless delay may be eliminated and strong, well directed business relations speedily established.

Regarding values it is difficult to speak; but it is easily conceivable that they are likely to be maintained many months at any rate, for in connection with costs the question of wages enters very largely. The reason of this is that the cost of materials of every kind consists mainly of wages, and it will not be possible to readjust the latter downwards, with the price of all foodstuffs and clothing still soaring.

There is no reason, therefore, why stocks which may be needed to-morrow should be sacrificed to-day, as the lumber has been produced at an outlay practically equal to its average selling price for several months past. With the maintenance of present prices, with stability and confidence on the part of manufacturers and wholesalers, with vigilance, and alertness to take advantage of every trade opening and with courage and unity on the part of the entire industry, there is no reason to fear but that Canada's great lumber activities will be strengthened and made increasingly prosperous in volume and variety in the years that are to follow the dawn of the brotherhood of man and the formation of the new league of nations.

* * *

Knowing Costs of Doing Business Essential to Success

Knowing costs and securing an adequate profit are vital factors in the success and expansion of any business undertaking. There can be no subject of greater importance to the retail lumber merchant than a complete and effective cost survey. At the general meeting of the Ontario Association held a few months ago it was pointed out that constructive work along this line had not progressed as rapidly as it should, and, in response to the request for detailed information from members, only a few had furnished the necessary data. Blank forms had been sent out, but the number of these reports filled in and returned have been comparatively small in proportion to the list distributed. It is hoped in the near future that the Association will be enabled to prepare a valuable and reliable costs analysis, which will serve as a safe guide to the retail lumber trade. The percentage of total sales, which represents the cost of doing business, it has been shown from the statements already to hand, differ all the way from eighteen to over forty-five per cent. There should certainly not be

such a wide margin as this and there is something radically wrong with the management and operation of not a few businesses. Leaks should be stopped and expenditure controlled.

An industry closely allied to the lumber business is that of furniture manufacturing, and it is interesting to point out the steps which are being taken by the Furniture Manufacturers' Association along this line. Recently a survey was made of costs and the facts adduced were startling considering the capital invested in the industry. Reliable figures compiled by a firm of accountants from information supplied by fifty of the largest furniture manufacturers in Canada show that the average total profits for the last four years amounted to only $1\frac{1}{4}$ per cent. on the money invested, or $1\frac{3}{4}$ per cent. on the total sales, which, of course, means that on the total average there was nothing whatever available for shareholders.

The Association is taking a progressive step, and will shortly appoint a competent cost accountant and an accurate uniform system will be installed. Every effort will be made to introduce efficiency and the industry placed on a more substantial and scientific basis.

One of the advantages of a uniform cost system of this kind is that manufacturers will be able to check up one another by a process of tabulated information, which is impracticable when scarcely any two firms are figuring costs by the same method. The importance of being able to check up in this way will be realized when the members of the Furniture Manufacturers' Association meet to discuss the question of prices.

What has been accomplished and is about to be accomplished can very well be followed by the retail lumber merchants, who have for years managed their businesses too much on the mere guess work principle. They should know definitely what their overhead expenses are, what are the proper charges to include, those that should be excluded, how overhead items should be determined, etc. The cost of doing business to-day is heavier than at any previous period in the history of the retail lumber arena, and stocks never ran into so much money. There has been a serious lack of uniformity in arriving at costs and the adoption of a simple, uniform system of accounting is one of the pressing problems which should be speedily solved.

* * *

How Far Will Present Available Labor Increase Production?

It is gratifying to learn that the labor problem is improving gradually, and that the seriousness in the help situation which has prevailed for the past two years, particularly in the woods end of the lumber industry, is about to be relieved. Wages are high and the costs of maintenance greater than ever. Every thing entering into camp supplies was purchased on the assumption that the war would continue until next spring. There is nothing tangible to warrant the assertion on certain sides that lumber is bound to be cheaper, if one may judge of what it is costing this season to produce the timber. The cut will be not only considerably decreased, but the expense is from 20 to 25 per cent. more per thousand feet log run than in previous years. It will be next July at any rate before the present logs are converted into lumber that can be shipped and just where lessened quotations are going to prevail is not discernible on the horizon. There is no indication that the outlay for shanty commodities will fall while wages in the bush are likely to be maintained at their present level during this season at any rate. The only advantage accruing to woods operators is that with the more abundant sources of labor supply more skilled help can be secured. During the past year or two not a few men engaged had been either very green at the work or advanced in years, all the active, energetic and efficient axemen being engaged in fighting overseas or doing splendid service with the Canadian Forestry Corps. Wages are running from \$50 to \$75 per month with all found, while the sleeping camp accommodation has of late years been greatly improved and every comfort and convenience provided for the men. When despatches in the press state that 10,000 men will be given work by the Canadian lumbermen and that released soldiers and munition factory workers will thus find an outlet for their energies, it must be remembered that comparatively few of either

class are adapted for woods operations. As pointed out by President Power, of the Canadian Lumbermen's Association, the work in the lumber camps is not easy. Men who have been trained to get high wages for watching machinery do the work in munition plants, are not likely to make good material for the lumber camps, where they will have to do real hard toil and do it well, for wages that may appear small to some of the munition workers. Then it is not every male who is capable of swinging an axe or trimming a log, but such as possess any qualifications in this direction will be given the preference at good wages. Hundreds of men can be accommodated in the camps of the Canadian lumbermen. It remains to be seen just how many are serious about wanting to turn their hand to something useful and productive, taking what is at home rather than idly waiting for something to turn up or spending in the meantime their substance in the vain hope that things will continue indently the same.

* * *

Editorial Short Lengths

The exports of pulp, paper and pulpwood from Canada to the United States continue to show a gratifying gain each month, and it is confidently expected that the business abroad in these lines during the current fiscal year will reach the one hundred million mark. While in these days of heavy war expenditures, the piling up of enormous national debts and the raising of great Victory Loans, the figure of one hundred million, so far as a trade return is concerned, may seem comparatively insignificant, still its vastness as applied to the pulp and paper industry is realized when one points out that during the past two years the export figures have more than doubled. There is not the slightest doubt that Canada is destined within the next decade to be the greatest pulp and paper producing land in the world.

* * *

Owing to the advent of peace there will probably, in the course of the next few months, be abolished a number of Boards and Commissions which have been doing war duty and service at Ottawa. There is a general impression, however, in business circles, that one particular body should be allowed to remain and continue its work with possibly changed functions. That body is the War Trade Board. Instead of placing embargoes on trade it might devote its energies and activities in the direction of promoting commerce. Canada needs an aggressive and alert Board of this character, with enlarged powers and representative in character, of all the leading industries of the Dominion, to grapple with and assist in the solution of post war problems and in fostering the development of the export business of the Dominion.

* * *

Some effective publicity work has been undertaken through the press by a leading industrial company in Canada in regard to establishing confidence and "carrying on," now that war activities have ceased. The reason adduced for business confidence are cogent and timely. The organization advises merchants, wholesalers and manufacturers to put their shoulder to the wheel at this juncture and make their weight felt—the weight of their money, the weight of their example, and the weight of their enthusiasm. This should be done, not by waiting, but by going right ahead with all normal business expenditures that will pay a profit or can be made to break even, and by spending money where good judgment says that it will be profitable. If it is a new factory, new equipment or an advertising campaign, it should be started right now. Premier Lloyd George has declared that "timidity is fatal to great action," and the policy of "wait and see" will not answer in the present condition of affairs. It is neither sound nor convincing. The announcement further says that the needs of Canada and the Empire guarantee prosperity, and if we live up to our opportunities and responsibilities the Dominion has the materials and will get the men. A striking paragraph is worthy of reproduction and here it is: More houses are urgently needed in Canada. Owing to the scarcity of materials and labor, depreciation of buildings and machinery has gone on almost unchecked. It must be made good. In England the need is even more acute.

Canadian Lumbermen's Association Expands

Membership Greatly Increased and Aggressive Action Taken At Rousing Executive Meeting to Grapple With Peace Problems and Overseas Trade

What was described by a director of the Canadian Lumbermen's Association as "one of the best meetings we ever had," was held at the Windsor Hotel, Montreal, on November 26. It was nominally a session of the directors, but the presence of a large number of Eastern spruce manufacturers, called together to form an association, was taken advantage of, and invitations were extended to these gentlemen. They were present during a part of the session, and also lunched with the directors of the Lumbermen's Association, at the request of the latter.

As an outcome of the gathering a considerable addition was made to the membership of the Association, which has now quite an appreciable number of representatives from the Maritime Provinces. Co-operation formed the burden of the speeches at the luncheon—the necessity of a strong central organization to deal with matters of interest to the industry, and able to show a united front on all general questions affecting the trade. Such subjects as are of local interest could be handled by the provincial associations, but matters affecting lumbermen as a whole could be looked after by the parent organization, thus preventing overlapping.

The following were present: Messrs. W. Gerard Power, president; Arthur H. Campbell, Campbell-MacLaurin Lumber Co., Montreal; T. G. Wheaton, Cedar Products, Amherst, N.S.; Archibald Fraser, Fraser Companies, Ltd., Edmundston, N.B.; Sir W. Price, Price Bros., Ltd., Quebec; Angus McLean, Bathurst Lumber Co., Bathurst, N.B.; W. S. Hofstia, Price Bros., Quebec; P. C. Walker, Shepard-Morse Lumber Co., Ltd., Ottawa; W. Mason, Mason, Gordon & Co., Montreal; J. P. MacLaurin, St. Maurice Paper Co., Montreal; G. W. Grier, G. A. Grier & Son, Ltd., Montreal; R. F. Grant, St. Maurice Lumber Co., Three Rivers; W. E. Golding, Geo. McKean & Co., St. John, N.B.; R. A. Snowball, J. B. Snowball, Ltd., Chatham, N.B.; W. J. Roy, M. A. Grandbois, St. Casimir, P.Q.; J. L. Christy, Iberville Lumber Co., Sault-au-Mouton, P.Q.; H. E. Craig, Northern Timber Co., Ltd., Toronto; R. G. Cameron, Cameron & Co., Ltd., Ottawa; W. J. Bell, Spanish River Pulp and Lumber Co., Sudbury; W. E. Bigwood, Graves, Bigwood & Co., Toronto; J. G. Cane, J. G. Cane & Co., Toronto; Dan McLachlin, McLachlin Bros., Arnprior; Gordon C. Edwards, W. C. Edwards & Co., Ottawa.

The Chairman Reviews Conditions

Mr. Power stated that the meeting was called to discuss present and future conditions. Since they last met great changes had occurred; they had been relieved of the burden which had been on their shoulders for four years, but they were facing another important problem. A number of men were coming back and they would have to be taken care of. The lumber trade, he was sure, would do its part in this matter. Many of the men would have to be handled with kid gloves, and he was positive that the lumbermen would look after the boys in this way, particularly those who were formerly in their employment. There was certain to be a readjustment period; it would be a question as to what tonnage would be available for shipping lumber to Europe, and it would be advisable to approach the Federal Government so that the trade secured its fair share of the available tonnage. Mr. Power pointed out that on a deputation which recently visited Ottawa the lumbermen were not even asked to be represented. He then read the following telegram from Mr. E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association: "Situation so undeveloped here am unable to express even a conditional opinion. Seems to me general feeling is that shortage of cut and big demand in other countries for lumber will bring to the lumber industry continued demand. Couple of conferences Atlantic City next week may throw light on general situation."

At the invitation of the President, Mr. M. Preisch, ex-president of the National Wholesale Lumber Dealers' Association, New York, made a brief speech. He referred to a large meeting of lumbermen at Chicago, where a feeling of pessimism at the beginning had given way to one of optimism. The meeting also expressed the opinion that the government should not fix prices beyond the present period, the trade preferring to "go it alone," believing that prices would be stronger.

Mr. W. S. Hofstia, New York, stated that among the pitch pine people in the States the feeling was very hopeful.

Mr. W. E. Golding stated that when in Ottawa last week he was assured that the government was desirous of removing the restrictions on the export of lumber into the United Kingdom, and the question had been taken up with the Canadian Commissioner in London.

In New Brunswick the manufacturers did not feel like manufacturing stock and then finding they were unable to ship it. The companies had to get out their logs now, and it was desirable that returned men should be released so as to help in the work.

Co-operation to Give Employment

The President stated that he had discussed the question of employment of men with the Canadian Pulp and Paper Association, which was willing to co-operate with the Lumber Association. Mr. Power proceeded: In working out the problems of soldiers' re-establishment it is quite impossible that a Federal Government Department for the purpose can adequately deal with the problem in an efficient and specialized way. It seems that it is necessary that the major industries of the country should combine to create among themselves the machinery necessary to promptly and effectively absorb the returned men rather than that the men should have to await government action and direction. Each industry or trade, having some form of co-operative association, should create among themselves a central distributing bureau for re-slating the returned men into the industrial scheme. To depend upon federal or provincial government activity in this move is to waste time and effectiveness. Let the industry that needs men organize to get them at once. By this method the returned men will be more quickly assimilated into the industrial activities of the country, instead of being pensioners and ultimately liabilities on the state instead of assets as they should be.

Mr. Power referred to the fact that three lumbermen were in Ottawa in the previous week calling on Ministers on lumber questions, yet they were all working independently of one another.

Mr. Laidlaw said that the lumber industry should be co-ordinated in order to deal with questions as a whole. Provincial associations, however, could deal with local questions. He understood that the Ontario Government had offered to carry out some propaganda for pine in the United Kingdom. The lumber industry as a unit might take up the question of advertising their goods to the British public.

Canada's Timber for Overseas Demand

The following letter, by the Hon. G. H. Ferguson, Minister of Lands, Forests and Mines, Ontario, addressed to a member of the Association was read:

"Now that the war is over, it becomes exceedingly important that active measures should at once be taken to see that the industries of the Province of Ontario receive their due share of business from overseas. There is no doubt that there will be a very large market for forest products, and it is most important that active steps should be taken to thoroughly canvas the situation and put before the allied countries the forest resources of Ontario and our facilities for handling their business. It seems to me that this is a matter that should engage the serious and prompt attention of Ontario lumbermen.

You are doubtless aware that the lumbermen of British Columbia selected a man who acts in an advisory capacity to the Agent General of the Province in Great Britain, and from information that reaches me, I believe that they are meeting with considerable success in impressing upon European customers the merits of B. C. lumber.

Would it not be well if the Ontario lumber interests were to get together at once and thrash this problem out? This Department will be very glad indeed to co-operate with you in every possible method, and facilitate in every way any effort the lumbermen may make along the line intimated.

"As the matter is one of pressing urgency and importance, I think some steps should be taken forthwith, and I would be glad to hear from you on the subject. If it will be of assistance, I would be glad to place this office at your disposal and arrange for a meeting on any date that may be suitable to you, and arrange to be here myself so that there may be a close co-operation between the department and the lumbermen."

Representative Lumberman—Not Politician

A long discussion followed, as to the necessity of the Federal Government sending a representative to the United Kingdom, France and Belgium, to place before the people the merits of Canadian lumber. Mr. Cane was very emphatic on the point of a representative lumberman being sent—instead of a party politician. The general view was that the man should represent the entire trade—not any of the provinces or any particular wood. It was not intended that he should interfere with the regular exporters' business, but should promote the interests of the industry. On the other hand, it was sug-

gested that Ontario or any other province might engage in a publicity campaign in the United Kingdom with a view to boosting its own particular products.

Mr. Power pointed out that the United States had sent trained men to Europe in order to show their products, and had made some substantial advances in the direction of advertising their products. Mr. Power also referred to the fact that a collection of American soft-wood timbers, which will be available for use in reconstruction work after the war, is now on view in the United Kingdom. It is understood that the collection will be exhibited in the chief trading centres of the United Kingdom. The exhibit has been undertaken by the Department of Commerce of the United States Government and is especially designed to explain the standard, grades and sizes regularly produced by the United States mills, and which may be had in the largest quantities and upon the most favorable basis of cost. The exhibit is in charge of a Trade Commissioner of the United States Department of Commerce. In Canada we should have the co-operation of the Federal and Provincial Governments with a view of sending a live man to Europe.

Mr. Clark made some strong observations as to the way in which the lumber trade had been ignored. The lumber trade was entitled to more recognition than it had received.

On the question of expense, it was suggested that the Federal and Provincial Governments should contribute to the large outlay necessary, but that the representative should be under the jurisdiction of the Association.

Referring to construction, a subject raised by Mr. Mason, Mr. Laidlaw said that in Toronto the builders were showing more activity.

Mr. Edwards stated that the shook trade was exceptionally brisk so far as his firm was concerned.

Mr. Edwards remarked that all their salesmen had been instructed to explain to customers the exact position as regards cost of production.

Increasing Membership in the East

An adjournment for luncheon was made, Mr. W. Gerard Power, who presided, in alluding to the activities of the Association, said the directors were anxious to increase the representation of the Lower Provinces. They were also anxious to co-operate on the subject of tonnage and other matters. The Association idea was one of vital importance, and in the United States it had met with great success. The Lumbermen's Association offered its best wishes to the Association of Spruce Manufacturers of Eastern Canada, and hoped that the two organizations would work together.

Sir William Price welcomed the suggestion of co-operation. Co-operation was absolutely necessary—it meant success. Paper manufacturers had been subjected to a great deal of persecution, which had brought about co-operation in the trade.

Mr. Bigwood also supported the idea of getting together. They had many things in common—legislation, insurance, representation at home and abroad, and in such matters the trade should be represented by one of themselves. It was necessary to have local associations, but let the whole industry be welded together for one common end.

Will Supply Much Information

Mr. Angus McLean declared that unless the lumber trade stood together and fought for their rights they would not accomplish what they desired. He had met a number of pessimists. The Spruce Manufacturers' Association would be able to secure such information so as to enable manufacturers to intelligently understand the market situation. In New Brunswick there had been a lack of information as to the amount of production. It was stated that the pine manufacturers were taking steps to organize, and he hoped it would be done.

Mr. Clark congratulated the manufacturers on having got together. The Canadian Lumbermen's Association represented every province—it could be the medium of voicing the united feeling of all the provinces. It was useless for every association to go to Ottawa—let this come through a central association.

Hon. C. W. Robinson was in a jocular mood. He made some punning allusions to three of the speakers. They wanted, he said, lots of "Power" in the lumber trade, and this could not be obtained without they had the "Price" and the "Bigwood." In New Brunswick the lumber business was of great importance, as it yielded a large revenue to the government. It was only by co-operation that the lumbermen could bring about those measures which were of advantage to the lumbermen and for the whole country. He was in favor of the removal of restrictions which hampered the lumber trade, and he understood that the Federal Government were willing to remove these restrictions. He moved a resolution to the effect that the two associations express a unanimous opinion that recognizing the many difficult problems arising from the signing of the armistice and in order to do our part in providing employment for the returned soldiers, increased production of lumber is desirable, but to encourage the manufacturers, the market conditions should be stabilized by the removal as soon as possible of all the present restrictions in trade with the

United Kingdom. We do therefore respectfully submit this to you for serious consideration and action."

Mr. Clark seconded the resolution.

After a few words from Mr. Preisch, Mr. Edwards recalled the reasons for re-starting of the Canadian Lumbermen's Association. While the Association had its ups and downs, they were encouraged to do even better than in the past. The resolution was agreed to.

At the invitation of the President, a large number of the members of the Eastern Spruce Association joined the Canadian Lumbermen's Association.

Next Annual Meeting in St. John

Mr. Gregory, having invited the Canadian Lumbermen's Association to hold its annual meeting in February next at St. John, the President promptly took up the invitation. It was unanimously agreed to hold the meeting at St. John, N.B., instead of Ottawa.

Mr. Mason, on behalf of the Association, expressed appreciation at the cordial co-operation shown by the Spruce Manufacturers' Association, and by those from the Lower Provinces.

On the motion of Mr. Angus McLean, a vote of thanks was passed to the Lumbermen's Association for their courtesy and for the invitation to the luncheon.

On the meeting of the directors of the Lumbermen's Association reassembling, the question of labor again came up, and the President was authorized to co-operate with the Canadian Pulp & Paper Association on this matter. A resolution was passed to the effect that it was understood that the expenses incurred should be borne by the Federal and Provincial Governments. The working out of the scheme regarding the placing of bureaus should be left to the executive of the Canadian Lumbermen's Association and the Canadian Pulp and Paper Association for final decision.

Some Matters that are Urgent

A resolution was also passed requesting the Government to obtain for Canada a portion of the indemnity from the Central Powers; to secure a share of trade arising from reconstruction, to repeal all war legislation as soon as possible, and to appoint a representative of the lumber trade on the reconstruction commission.

The question of a proposed increase by the railways of the stop-off charges was discussed. The proposal is to increase these from 1c per 100 lbs. with a maximum of \$5 per car to 2c per 100 lbs. with a maximum of \$8 per car. This increase will be opposed by the Association.

This concluded a very enthusiastic and harmonious gathering—full of promise for further vigorous activities, especially in view of the accession of strength from the Maritime Provinces.

After the meeting Mr. W. Gerard Power received a telegram from Mr. E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, announcing that the United States Government had cancelled the maximum New England spruce prices as of December 1st.

Death of Charles B. Williams

Chas. B. Williams, a widely known retail lumber merchant and planing mill man, whose place of business is at 11 St. Albans Street, Toronto, died on November 21, after several weeks illness. He was 48 years of age and had been engaged in the lumber line for a long period. He leaves a wife and one son, Lieut. Gordon Williams, an officer in the Naval Department, at Ottawa. Mr. Williams always took a keen interest in racing and was a member of the Ontario Jockey Club. He was a familiar figure at the Woodbine meetings and was popular in both lumbering and sporting circles. He was head of the firm of the C. B. Williams Co., Limited, with which he had been identified over twenty-five years.

Building Permits Will Be Large

Reconstruction and the development following peace should see building in Toronto next year to the value of between twenty-five and fifty million dollars, according to the City Architect's Department. This estimate of 1919 building is, of course, dependent on an easy transition from a war to a peace basis without unforeseen labor or financial obstacles.

Last year the building in Toronto slightly exceeded \$7,000,000, and although the aggregate for this year will exceed that of last it will hardly reach the \$8,000,000 mark.

In support of the large estimate for next year, it is pointed out that there has been little building during the past four years and the accumulated pressure and the extension plans that have had to be held in abeyance on account of the scarcity of labor and the steel shortage will give a great impetus to the building trades. In addition it is anticipated that there will be a determined attempt to secure export business.

Building Up Big Business in the Retail Yard

Kind of Stock that Should be Carried and the Way to Establish Strong Connection With all Classes of Customers—The Proper Facilities

The character of the stock carried in a yard will depend upon the local demand. This is modified, of course, by the price and adaptability of the different woods and materials. It would be foolish to stock beveled corn cribbing in the wheat belt or well curbing in a locality where it is necessary to bore all the wells. It is, of course, necessary to carry a larger and better assorted stock than was carried in days of yore, but it is wise to keep the stock as low as possible and still meet the needs of the community. Styles in lumber change the same as in other things, though, thank goodness, not so often. So it happened a few years ago that many of us were caught with several thousand feet of grooved roofing on hand. Some hung on to this and invoiced it from year to year. It took up room and held good money out of circulation. It was dead stock and the wise dealer soon saw the light and put it out for common boards. Some times, according to a writer in "Mississippi Valley Lumberman," it was necessary to sacrifice a little on certain goods and get the money to use than to hang on to them for years and then have to stand a loss. Any old-timer in the lumber business will remember the many styles of casings and blocks that are still stowed away in some sheds. Lucky is the yard that cleaned this old stock out before the ladies learned that plain finish is much more easily kept clean, as well as more attractive in appearance.

Must Cater to the Demand.

Some localities demand so many kinds of wood that a lumber stock means the investment of much more money than it might in another district. If the sales are equal, the yard with the smaller stock is far ahead at the end of the year. I believe in giving the customer what he wants and when he wants it. One big excuse the fellows who patronize mail order houses make is that the goods cannot be secured locally. Of course, this works both ways. The dealer says that if his customers send away for these things it does not pay him to stock them. The customer says that because his dealer does not keep these things it is necessary and perfectly all right to buy by mail. It reminds us of a bronco team that will not pull together. First one tries to move the load and then the other. Each one trying it alone finds it too heavy and so decides that it is no use to try together. This makes a balky team and so there are no results so far as progress with the load is concerned. Just as team work with the broncos is necessary so is team work in the community with dealer and customer necessary. Let the dealer make it known that he is anxious to have in stock any article that a customer may want, and failing to have it in stock will promptly secure it. This will encourage more home buying.

Trying to please the customer and striving to have in stock anything he may wish does not mean that we shall not make an effort to educate the public to different woods, etc., that may serve the builders as well or better than what has been demanded, and at the same time make it easier for the dealer and perhaps add to the profits. But this must be subtly done. There is a feeling abroad that if one offers a substitute, he has an axe to grind and does it not for the good of the dealer. So, often, unless advice is asked, it is unwise to tell a man that he has made a poor choice and should have something else.

Should Carry More Short Lengths.

One thing that we all should do more and more is to carry short lengths. In times past this has been the unpopular thing to do. Very few carpenters have specified the length of dimension that was to go into the building but ordered all long stuff and would cut the short pieces from this. Also nearly all the siding, boards, shiplap, and such material was ordered sixteen foot, no matter what the run or size of the building. So it has always taken a good deal of tact and talk to dispose of the short lengths that have accumulated. By judicious argument and an appeal to the intelligence of the contractor, he can often be converted to the habit of specifying in his bill of material the exact lengths of dimension that are to be used. With the other material usually after a heart to heart talk one can induce the contractor to use a percentage of short lengths and allow us to send out to a great extent at least the lengths that are convenient. In these days when the yard manager is making up more and more of these bills, it is easy to specify short lengths and sometimes even old stuff and so keep the stock clean and in a healthy condition. Short lengths can be bought for less money than the longer and answer the purpose just as well. This serves to help in two ways. It gives the dealer a

chance to make a little more money and at the same time conserve the timber of the country, which is a big item in these days of conservation and diminishing forests.

In selling lumber do not talk grades except on rare occasions, when the circumstances make it imperative. Show the customer the material, tell him the price and make the deal. He does not care, or at least he should not care, what grade you call any of the material. What he is anxious to do is to get material suitable to his needs and at the price he is ready to pay.

Have the Stock Handy

It is a fine thing, too, to give the price by the piece on many items when asked by a prospective purchaser. When the average man asks the price of a two or four by twelve, to tell him that it is worth forty dollars per thousand means nothing to him. The exact figure to give him will be governed by the judgment and custom of the dealer. Where lumber is figured at the odd cent amounts, of course, one would tell him the piece is worth thirty-two cents. I believe I should tell him that one stick would cost him thirty-five cents and that two could be purchased for sixty-five cents. It is worth a little more to a man when he is buying only one piece. It takes just as much of the manager's time and the buyer always wants to pick out a good stick, which upsets the pile and to that extent lowers the grade of the lumber in the pile.

No two men will arrange a yard in the same way. What suits one will not suit another. One stock is not exactly like another and this has its influence on the arrangement. But all agree that everything should be as handy as possible. I believe that in a yard as well as in any other place there should be a place for everything and that everything should be in its place. When one mixes up the piles of different material, having a pile of shiplap next to a pile of dimension, and flooring next to the common boards, it gives the yard a topsyturvy appearance and it takes more time to load out the lumber. In stocking a yard the manager should draw a diagram of his shed and decide just where each kind of material should be piled. Then he should place this material in the places provided and should always keep these spaces for the same stuff. One arrangement will not suit all, but I like to have all the dimensions down one side of the shed, beginning with the short two by fours and running up to the longest. Then the short two by sixes and on up to the long two by sixes. Then the two by eights, two by tens, etc. On the other side of the shed there is room for the shiplap run in same way, first the short and on up to the longest lengths carried. Then the boards of different grades still in the same order of short lengths first and long lengths last. The flooring, drop siding, finish, ceiling, and other light lumber can be put on the upper deck. These are not so commonly sold as dimension and boards, are more easily put up and perhaps stay cleaner than they would below. Then too, the piles are not subjected to the rough usage they would get down on the ground. So many customers hate to take the top boards. There seems no reason for this except a mere desire to tear up the pile and make more work for the manager, so having this light material above gives the manager an opportunity to keep his piles even and in good shape.

In piling, I believe the most satisfactory way when the stock is dry is to strip the dimension every five pieces in depth and all other material every ten pieces. Stripping keeps the piles in good shape and saves a lot of time when checking up the stock. Where the ground under the pile is damp it is a good plan to strip every layer for three or four layers. This gives the bottom pieces a chance to dry out and prevents the transmission of moisture from one piece to that above. In stripping, be sure that each lath is directly above the supports of the lumber. This is overlooked very often, especially by beginners. I have seen boards actually cut off by the enormous pressure in a pile when a lath was misplaced. And when not so disastrous, thousands of feet of good lumber has been pressed out of shape, provoking the man who has had to use it.

A three-master was launched at Canning, N.S., recently, which went one better over anything ever heard of yet. Vessels have been launched with their spars and standing rigging aboard for years. But this one was not only all rigged and her stores all on board, but also had her sails bent and the crew on board, and when she slid into the water one of the men took the wheel and headed her around, and the skipper ordered the sails set, and off she went on her first trip.

Hydroaeroplane for Forest Protection

St. Maurice Association Has Purchased One for Patrol Use and Believes It Will Render Great Aid

By Hy. Sorgius, Manager, St. Maurice Forest Protective Ass'n.

Although only conversant in a general way with reference to the possible application of the hydroaeroplane to forest protection, I am of the opinion that this machine will in the future be a valuable feature in forest protection work, both for the locating and reporting of forest fires. In other words we may call it "a moving observation tower."

The directors of the St. Maurice Forest Protective Association, at a meeting held on November 15, agreed to purchase a hydroaeroplane for the patrolling of our area beginning next spring. We have already corresponded with the Canadian manufacturers, asking them if they could build us a machine which would suit our purpose.

The advantages in the hydroaeroplane patrol, in my opinion, would principally be the locating and reporting of forest fires, and also in the rapid transportation of a small crew of men and equipment to the fire. The main feature in forest protection is prevention; secondly, to get

"Moving Observation Tower" with 150 miles an hour speed, consuming six gallons of petrol each hour.

at a fire when it is in its infancy, and we believe that, with the use of a hydroaeroplane, we will be able to detect and reach almost every forest fire before it has a chance to make any headway. In a country like ours there are large areas where, should a forest fire start it would take from a couple of days to a week to get the necessary help and equipment to the scene of the blaze. During all this time the flames are burning large areas of valuable timber, but with the use of the hydroaeroplane we shall be in a position to get men and equipment to the fire in a short time, thereby giving the men a good chance to extinguish same.

The State of Wisconsin had the hydroaeroplane patrol for one year and the Commission of Conservation is so greatly taken up with the efficiency of such a patrol that it is the intention to establish a permanent aeroplane patrol throughout Wisconsin, now that the war is over.

I may say that it is the opinion of our members that the hydroaeroplane is of great value for forest protection work and that it will be economical and satisfactory. Whether or not this important patrol will prove practical in our work, we are going right ahead with the establishment of the same for next spring and we will be in a far better position at this time next year to give you data as to cost and efficiency of said system.

Shipbuilding News from East and West

Alex. McRoberts, of Collingwood, who was employed as a foreman in the shipyards in that town, died recently from influenza, which was followed by pneumonia. He was 43 years of age.

W. R. Huntley and Son launched from their shipyard at Parrsboro, N.S., a four-masted schooner called the Governor Parr. She is 218 feet in length, 39 feet beam and 18 feet depth, 3,000 tons register, classed for thirteen years in Bureau Veritas, fitted with fifteen horse power Fairbanks-Morse engine for hoisting power, and electric lighted throughout with a Delco lighting system. The vessel spreads four thousand yards of canvas. She is constructed of oak, birch, spruce

and hard pine, has stockless anchors and all the latest improvements.

Establishing for herself in the Great Lakes Dredging Company of Fort William, a record for construction, which leads Canada in wooden shipbuilding, the War Nipigon, the second of the wooden vessels built at the head of the Great Lakes, sailed for the east recently. The keel was laid on May 18th, the boat was launched on September 21st, completed on November 11th, and sailed on November 15th, an average of 350 men being employed in the work. The ship, which was built for the Imperial Munitions Board, is modern in every respect. In the construction of the War Nipigon 1,500,000 feet of Douglas fir direct from the Pacific Coast was used. The boat is fitted with triple expansion engines, two Howden water tube boilers, the horse power development being 1,300. The cargo capacity is 3,100 tons dead weight. There is accommodation for sixteen of a crew, and the boat is 261 feet length over all, 250 feet between perpendiculars, 43 feet 6 inches beam and 24 feet molded depth. The War Nipigon is fitted with electricity, and will be equipped with wireless on arrival at Montreal.

The tug Gordon Brown, which has been rebuilt, was launched recently at Port Stanley, Ont. She is owned by the United Fish Co.

A. E. McMaster, secretary-treasurer of the Port Arthur Shipbuilding Company, Port Arthur, Ont., has joined the staff of the Whalen Pulp and Paper Co., and has taken up his residence in Vancouver.

Arthur Conmee, son of the late James Conmee, M.P., who is a brother-in-law of James Whalen, president of the company, has succeeded Mr. McMaster at Port Arthur.

A contract has been awarded the Pacific Construction Company, Coquitlam, B.C., for the construction of five wooden ships, two of 1,500 tons and three of 3,200 tons.

The last of eight trawlers built by the Collingwood Shipbuilding Company for the Naval Service Department, was launched recently at Kingston. These trawlers are 125 feet and are to be used in patrol work.

The schooner Meriam H, built in the yards of the Acadia Shipbuilding Company, of Saulnierville, N.S., was launched recently. The vessel is 157 feet over all, 126 feet keel and 33 feet beam, and has been purchased by A. S. Randell, of St. Johns, Nfld.

The four-masted full-rigged schooner Edgewood, built by the Quebec Shipbuilding & Repair Company at their plant on the St. Charles River, was recently launched in the presence of a large number of spectators. The plans for the launching were so admirably laid that the use of jacks was unnecessary. The trim craft sailed off the ways the minute the men started the wedges going. The Edgewood is 200 feet over all, with a keel of 177 feet, and a depth of 15 feet, is of 147 tons register with a dead weight tonnage of 1,240 tons. She is built of B. C. fir and Canadian spruce, oak and birch. The keel, stem and stern are constructed of oak and the balance of the ship with the remaining woods.

That wooden ships will be in demand for ocean freight for the next decade at least and the wooden shipbuilding industry of British Columbia can look to a growing demand for their products is the opinion of W. S. D. Cook, general manager of the Lyall Shipbuilding Company, of North Vancouver, who returned recently from an extended trip to the East in connection with shipbuilding matters. Shortage of steel and pressing demands for bottoms has assured the well-built wooden vessel its place in the requirements of the world's water transportation, he says. Mr. Cook, in expressing this opinion, stated that it is not his alone, but is generally held among shipping men.

With so many of the largest yards turning to steel construction, there is naturally much speculation regarding the outlook for wooden shipbuilding; especially in the Pacific Province. It is recognized that there will always be a demand for wooden construction in places where there is plenty of shipbuilding timber of the right quality, if only because of the cheaper production thus made possible. Ships are now being built of wood reinforced with steel and iron-banded wooden schooners are also proving satisfactory. For various reasons the steel ship has an undoubted advantage over its wooden brother, but it is always possible that just as iron replaced wood to a certain extent and steel replaced iron, some other material will replace steel. In the meantime, the builders of wooden ships appear to be finding plenty of work at highly profitable prices.

News was recently received in St. John, N.B., that Robert Robertson had passed away in London, England. He was a former resident of St. John, and in the palmy days of wooden shipbuilding his father did an extensive ship chandlery business. His two sons, Robert and George, were connected with the establishment before and after the fire in 1877.

One of the largest transactions ever made in ocean-going wooden ships on the Pacific coast has just been completed by the shipping firm of Thorndyke & Trenholm, of Seattle. It was announced that the firm has purchased for French interests six wooden motorships being built by the Lyall Shipbuilding Company, of Vancouver. The consideration was given as about \$3,000,000. The ships are of 3,000 tons dead weight capacity each.

Wholesale Lumbermen Discuss the Outlook

Every Phase of Productive Domestic and Foreign Situation Reviewed—Prospects Are Encouraging for Export Trade in Forest Products

The November meeting of the Wholesale Lumber Dealers' Association, Inc., which was held at the Albany Club, Toronto, on November 15th, was one of the most interesting yet conducted. A. E. Clark occupied the chair and there was a very representative attendance.

In opening the business meeting, after the conclusion of the dinner, Mr. Clark said that they were meeting for the first time under conditions of a peace which they hoped would be permanent. The arrival of peace brought to the front many problems which they would have to consider thoroughly, and he thought it would be a good plan to call upon each of the members present to express their views regarding the trade situation and the outlook, so as to furnish a guide for the formulation of plans for future business. Various opinions were being expressed, some optimistic and some otherwise, in regard to the outlook. Personally, he felt that life in the lumber business, or in any other line of business, was a good deal what we made it for ourselves. There were a great many things that might be said both pro and con regarding the outlook. They were not met together to put forward one side to the exclusion of the other, but to consider all the phases of the question and to find out how they could best prepare to deal with the developments of the future. Mr. Clark then called upon the members one by one to express their views, commencing with A. C. Manbert, of the Canadian General Lumber Company, Toronto.

The Fundamentals of the Situation

A. C. Manbert, after his introductory remarks, treated the members to an analytical discussion of the problems which may be expected to develop out of the return of peace, dealing chiefly with those features which are related to the problem of exchange. Everybody would seek to find out some sort of an analogy in past events to serve as a guide to what might be expected to develop out of present conditions. No two men would absolutely agree in their views on the subject and no two would be likely to draw the same parallels from the events of the past.

The most recent case of striking similarity to the present situation was that which arose out of the Civil War in the United States, and that, of course, in no degree approximated the present case. Vast as were the events growing out of the Civil War, they were limited to this continent and affected a situation entirely different from that which existed to-day in Europe. It was difficult also to find an answer to the present problems in any specific or peculiar illustrations because each illustration was generally allied to some other controlling condition which qualified it to a greater or less degree.

The speaker said that we might think, for instance, that out of the present situation of restricted supply there should develop a tremendous demand, but common sense would tell us that that point of view must be qualified by more or less remote conditions which came into effect and upset our calculations. So, we had to view the thing in the large and try to get at the fundamentals of the situation.

The fundamentals were, in his view, these: That for a period of four years, generally speaking, the world had been developing abnormally, and under extreme urge, in an arbitrary direction, and that out of that process there had developed a familiarity with new conditions, which had become more or less accepted. To-day we had reached a point where all of these familiarities had to be changed because of new events coming into the field. Instead of the whole world being engaged in intense activity to make things to be thrown into one vast bon-fire, we were now content to put out the bon-fire and turn our energies into channels of a purely constructive nature.

Foreign Lumber Stocks are Low

It seemed reasonable to expect that all this destructive work would result in depleted supplies, declared Mr. Manbert. The reservoirs of products were more or less generally empty. In England, for instance, stocks of lumber in the yards were practically nil. The same conditions, more or less, prevailed in other countries. Fundamentally, the conditions of prosperity were on the following basis; given a scant supply and an unsatisfied demand and we would have expansion; while with an excessive supply and a scant demand we would have depression. The thing we were all seeking for was to know what were the peculiarities, what the special conditions of the situation, because it did not start from such a simple process as this,

but from a governmental and controlled situation wherein individual initiative was not free, but hampered by various restrictions imposed against our wills, which determined the freedom with which we could govern our various actions. This made the situation intricate because we did not know how fast or how far this other situation would conform to our energies which stood ready to supply these respective needs.

It was not alone a question of producing these things, but also of paying for them. Many people were saying that we could not have good times because Europe was bankrupt and could not pay. Ordinarily we thought that the man who could supply the things that were required must become prosperous, but in the affairs of nations exchange entered, and when exchange reached a prohibitive rate one nation could not buy until the situation was cleared up. These things were determined by more or less arbitrary conditions outside of the control of governments. They had to be arranged by means of governmental interference or governmental assistance. In other words, Great Britain to facilitate the purchase of supplies in the United States, had made a loan from the United States, and the money so borrowed was spent in the United States. We in Canada would undoubtedly have to have something of the same sort brought about here in the near future. Canada would have to supply credit for the purchase of her materials. Individually, we could not give the necessary credit, but through our government we could. It was not a simple matter of our selling the things over there, or of their wanting our products. All the mechanics of the transaction had to be arranged for.

Continuing, Mr. Manbert said that the interests and the necessities of the situation were such that perhaps never before had so great a measure of intelligence, consecration and intensiveness been manifested in politics and affairs. It seemed to him that the degree of progress which we could make in the settlement of the situation would be determined entirely by our capacities for dealing with it. In other words, we could not turn at once and develop a new manner of doing things, but it must be built up in a halting and restricted fashion the same as the process which had worked us on into the war until the nation was finally entirely interested and determined and engrossed in that enterprise.

Passing Through Probable Periods

So, if we were to make an attempt to imagine what was going to follow the present situation, we must expect a period of some degree of heistation, then a gradually increasing impetus in a new order which would progress until that time should arrive when the new order would show an increased supply and a satisfied demand. We knew this much, that men generally lived more or less to satisfy their desires for comfort, housing, clothes, etc. As soon as these desires were satisfied we fell back and rested. So it seemed probable that we must have a period of hesitation, a period of development, a period of accomplishment and then a period of rest. How short or how long would be these various periods, it would take a wiser man than he to say and he would like to have this information now, because with it he would be the next Baron Rothschild.

H. G. McDermid, of the Union Lumber Company, Toronto, put his ideas in brief and vigorous form, saying that if the lumbermen all preached optimism, showed that they felt optimistic and gave evidence of it freely, it would not be long before prosperous times arrived. "Keep at it," he said; "spend some of your money in advertising how you feel, and you will get the retailers throughout the country feeling pretty much as you do."

The chairman, being reminded by Mr. McDermid's remarks, of the work of the Ontario Retail Lumber Dealers Association, reported that at a meeting of lumbermen which he had attended recently, at Montreal, it had been brought to his attention that the Ontario Retail Lumber Dealers' Association was working upon a list of standard finished sizes for millwork, and that the Toronto members of the Retailers' Association had already adopted a list of standard sizes for millwork in white pine, spruce and hemlock, which was being considered by the rest of the Association with a view to their being adopted as standard for the whole of the province. Mr. Clark suggested that the Wholesale Lumber Dealers' Association might co-operate with the Ontario Retail Lumber Dealers' Association in this

matter so that the standards adopted would promote the use of Canadian stocks.

W. J. Lovering, Toronto, treated the members to a review of an interesting trip which he had recently taken across Canada to the Pacific Coast. He referred to the situation created in the Mountain district of British Columbia by the failure of the Prairie markets. All through the Mountain section the mills were stocked up with lumber which was cut for the Prairies, but for which they were now seeking markets elsewhere. In the Coast district the whole lumber trade was being held up by the demand for shipbuilding timbers and for aeroplane stock. The mills on the coast were being piled up with the offal from the stock which they had been getting out at high prices for ships and aeroplanes and for this accumulation of clears, and number one and two common it was almost a case of "make us an offer."

The chairman pointed out that what Mr. Lovering had said was an indication of the lack of association between the lumber interests of eastern and western Canada. He suggested that the Wholesale Lumber Dealers Association should consider trying to persuade the B. C. lumbermen to work in conjunction with the lumbermen in the east. If the east and the west could get together it would do a lot toward stabilizing the lumber market.

P. J. McCormack, Toronto, Eastern Sales representative of the Canadian Western Lumber Company, Fraser Mills, B.C., made an announcement or two which pleased all the members present. The British Admiralty, he said, were asking for quotations in British Columbia on no less than 700,000,000 feet of material for house construction, mostly small timbers, boards and dimension which they wanted as soon as it could be shipped. The British Government also had recently sent out an enquiry for 4,000,000 feet of clear fir. When the quotation was cabled to them the order was placed within 48 hours.

Necessity of Holding Stocks Firmly.

W. E. Bigwood of the Canadian General Lumber Company, Toronto, and Graves Bigwood and Company, Byng Inlet, Ont., discussed the situation from the manufacturers' point of view. During the past week or two he had met several manufacturers in other lines such as wool, cotton and boots and shoes, and he found among them all the same feeling as among the lumber manufacturers, that in order to assist in sound business conditions it was necessary for the manufacturer to hold his stocks firmly. The chief fact in connection with the situation was that stocks in all lines were depleted and had cost a great deal to produce. Yet they had to recognize that a change was taking place and that normal conditions could not be brought about in a week or a month. Indeed, if they wanted to create a panic or to slaughter their stocks it would be necessarily only to force them on the present market. Next year, he believed, the stock on the market would not equal 60 per cent. of this year's stock. He thought that the situation in the Georgian Bay district was similar to that in the Ottawa Valley and in the East.

The allied countries were to-day in great need of lumber and, therefore, it would be unnecessary to sacrifice stocks on the Canadian market. The allied countries simply had to turn to the countries which would be able to supply the stocks. He had heard to-day that the Dominion Government was negotiating a loan of \$500,000,000 to Belgium and France with a view to having all the money spent in Canada. The lumber industry would undoubtedly obtain its share of the business thus created.

Mr. Bigwood had had an interview that afternoon with the Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines for Ontario, and had been assured that the Government of Ontario was alive to the necessity for demonstrating Ontario's natural resources to the world, so that when normal times returned Canada would be in a position to take her proper place in the trade world. He understood that the lumbermen of British Columbia had a man in the field in Great Britain to promote the use of British Columbia forest products. The southern pine manufacturers had taken a similar step and some of the western lumbermen in the States had representatives on the ground who were studying the problems of the markets. There was no question that the allied governments were going to deal direct in every way they could. Canadian lumbermen therefore, were in line to get their portion of the immense trade that would come, if they stood by their guns and were ready to serve them.

Optimism Should Prevail on All Sides

F. T. Verrall, of McBean and Verrall, wholesale hardwood dealers, Toronto, said that the hardwood trade had been good during the war. The volume had been somewhat light, but the prices good. As to the future, they saw nothing to worry about. They were simply waiting quietly to see how the situation would develop.

H. J. Terry, of Terry and Gordon, Toronto, considered that the present was no time for pessimism. England was practically cleared out of lumber. There would be an abnormal demand for the rebuild-

ing of Belgium and Northern France, as well as for the delayed work in Great Britain. If the lumbermen just stood ready, and displayed their optimism heartily, there would be no question about the outcome.

The chairman reported that a few weeks ago the representative of one of the largest lumber importing houses in Great Britain had told him that there was less lumber in Great Britain to-day than ever before within his memory, and had added "if, and so far as, Canada can supply us, we will not buy anything from Norway and Sweden."

C. W. Wilkinson, of the Union Lumber Company, reported that he understood the largest operators in the Ottawa Valley had decided that it would be necessary next year to obtain \$10.00 a thousand more for their lumber than they had been receiving this year. Moreover, when the Ottawa Valley manufacturers announced the prices they wanted they usually were closely enough in touch with conditions to know that they would be able to get them.

Some Evidences of the Revival

He had received a notice that morning from the National Wholesale Lumber Dealers Association of the United States to the effect that the \$2,500 restriction on building had been removed, and that it was now permissible to build anything up to a value of \$10,000. This ought to stir up the building business across the line. In Great Britain the shortage of houses was almost beyond relief. He had seen it stated recently in some journal that in pre-war days the largest number of houses ever put up in one year was 150,000, and that during the first year after the war there would be 300,000 houses put up. Moreover, Lloyd George had recently made the statement that there would be enough building work in Great Britain and Europe to keep all the mills in North America going for ten years.

H. J. Terry secured the floor at this stage to say that he had heard the statement made that the first cargo of deals was at that moment being loaded for Great Britain in the lower Provinces.

A. Read of Read Brothers, Limited, Toronto, said that they did not have to go to Great Britain to find evidence of business revival. He had seen it stated in the papers that morning that the T. Eaton Company were going on with the erection of their large mail order building in Toronto; also that there would soon be definite developments in Toronto's mystery block. He had also been told by a manufacturer that he had sent out enquiries for a large quantity of lumber for portable houses for Great Britain. Then there was the big power canal that was to be constructed at Niagara Falls and no doubt also the new Welland Canal would be completed.

N. L. Smith of the Wm. Laking Lumber Company, Toronto, said: "Optimism is the word. This is the time for optimism. I believe that hardwoods, in a few months, will be at an even greater premium than they have been during the last few months."

Alex. Gordon, of Mickle, Dymont & Son, Barrie, Ontario, gave an excellent review of the trade situation. He did not see any reason why lumber should be any lower in price than it was at present. In fact, he thought that some lines were sure to advance. Bearing in mind that manufactured stocks had been consumed, leaving a clean sheet for the manufacturers to start upon, firm prices and even some advances seemed inevitable. There was no doubt that there would be a heavy demand for lumber across the seas, as soon as we could get into shape to produce the stock. Possibly there would be a lull in trade for a short time, while manufacturers were readjusting their affairs and arranging new ways of doing business. It was not likely that any of the manufacturers would return to their old methods of doing business. They had all learned a great deal during the war, and he believed that one of the important results would be that manufacturers would adopt more modern methods in the future. If the Victory Loan was utilized for the purposes suggested, it would stimulate all lines of business to a remarkable extent, and he could not see any reason for entertaining doubt about the future. The output for the coming season would unquestionably be light. The expenses of operating would be abnormally heavy and, consequently, prices could not go down.

Good Business in Canada From Now On

D. C. Johnston of the Union Lumber Co., Toronto, gave a breezy talk upon the value of being optimistic. He advised the members to preach good times to the very best of their ability. We were going to have some mighty good business right here in Canada from now on. A lot of construction work was going to be carried out, as well as a great deal of improvement work. He saw no excuse for anything except optimism regarding the situation and outlook.

The chairman drew attention to the fact that during the next few years America would have the task of filling up the storehouses of Europe. We would have to grow the grain for this purpose, put the men on the farms, house them and clothe them. All this meant that trade was going to be splendid.

A. C. Manbert again arose in order to discuss a feature of the

situation which had not yet been touched upon. In November and December of every year, he said, the trade always had to face a period of dullness. Ordinarily, they would not think much about this, but it now happened to come concurrently with the peculiar situations arising out of the conclusion of peace, and as all of us were, more or less, keyed up, any little cessation of business naturally struck us as needing perhaps something more than the ordinary explanation. Lumbermen should remember this fact, as it was certainly most important. The end of the year was a period in which they all took stock, and settled up for their last year's purchases. The manufacturers were figuring up what they had done during the year, and the buyers were getting ready to take their January 1st inventories. Therefore, in the very nature of things there must be some hesitation.

The question of costs had been touched upon. Lumbermen who had any intimacy with production, Mr. Manbert said, and who were paying the operating bills, at the present time, knew what this meant. He reminded his hearers that, so far as they were concerned, it would be next July before new lumber would be in condition to be shipped on the market. They had a long time to wait therefore, and inevitably a considerable volume of stock would be consumed during that time under a normal demand.

Canada's Portion of Export Trade

The chairman, in summing up the results of the discussion, said that there were, no doubt, many things that the Wholesale Lumber Dealers Association could do to promote trade. He suggested that during the next two or three weeks the members individually should devote a good deal of thought to the subject and be prepared to make suggestions at the next meeting, for the promotion of the general interests of the lumber trade. During the third week in November the Canadian Lumbermen's Association would be holding a meeting of directors, with the idea of formulating plans to meet, not so much the local as the export situation, and to try, either through themselves or in co-operation with the Government, to work out a scheme for securing for Canada its portion of the export lumber trade. The

lumbermen of British Columbia had organized for this purpose, the southern lumbermen were promoting their interests in the export trade with vigour. They already had lists and details of everything they manufactured and their literature was going to Great Britain and Europe in large quantities. Canadian lumbermen had to do something more than throw up their hands and think that the trade would come to them of its own accord. They would have to go after it, and it was up to the Wholesale Lumber Dealers Association to take their part towards this end. They would, at least, be able to stand behind the Canadian Lumbermen's Association, and co-operate with it in the promotion of their export trade.

D. C. Johnston spoke again, briefly, in order to draw attention to the importance of considering the cost of replacing stock that was now being sold. The wholesaler or retailer had a certain class of trade which he had to take care of and could not afford to dispose of stock without giving full consideration to the cost of replacing it. It was not going to cost any less to get out lumber this year, just because the war was over. It was too late now for this. The end of the war would not have any effect upon the cost of supplies, which had been contracted for the camps for the present winter.

In view of the fact that the third Friday in December will be very close to Christmas, the members decided to hold their December meeting on the second Friday, namely, December 13th.

C. W. Wilkinson, chairman of the Membership Committee, reported that since the last meeting, one new member had joined the Association, namely, the Allen-Stoltze Lumber Co., Ltd., of Vancouver, B.C., represented by R. G. Chesbro.

A resolution of condolence was carried in connection with the death of Hugh Brennen, to be sent to Mrs. Hugh Brennen, and also one to the Wm. Laking Lumber Co., Toronto.

H. G. McDermid, on behalf of the wholesale lumbermen of Toronto, who subscribed to the cost of a full-page advertisement in the Toronto daily newspapers in connection with the Victory Loan, reported upon the matter and expressed the appreciation of the Victory Loan Committee.

Ba Gosh! Dere's Good Tam Comin' on da Lumber Beezness

Lumbermans 'Canayen:

Dats not verree offen I'm come on Toronto an, ba gosh, I'm not soree, for dats one dang dry place. No wiskee blanc, no gin, only Victree Bon, an one dose feller wat sell dese Bon, he catch me too an tak mos all ma monee.

But dats not wat I'm try for tel you, Mon Vieux, I'm gon tel you bout de Lumbermans Supper las wik.

You see, ma boss have her office on Toronto, but he have beeg mill near ma place on Quebec, an he sen me lettre for come on hees place an tel hows de beezness go below.

I'm come up las Friday an me an de boss we talk mos all de day on her office. Bout tree clock we have leetle bite for eat, but not nuff for Chantier mans an Im hongry like bears wen he say bout 7 clock. How you like come on de Lumberman Supper?

Supper, dats de word, an its catch me bout de top ma overall for Im hempty like Severe Leveilleurs jug on New Year night. I say pretty queek Im tak chance wit dose Lumbermans for Im one mesef an can eat de pork an bean four, five time a day an get fat.

We go on a place wat de Boss say are Club an deres lots de wel dress feller dere too, but Im see nottin for eat.

We hang aroun beeg room for bout a hour an smoke an look de picture on de wall an jus bout de tam Im gone tel de Boss we better go on restaurant for get a bite, a officer come on de room an say someting. Im not hear wat he say but dose feller get up an go down stair, an Im go wit dem for Im not tak a chance for lose my supper.

We go on nudder beeg room an dere I be glad for I see a beeg table all fix for de grub. De Boss he give me place near herself an wen we all ready a couple dose officer come on wit de—no, we didn get de pork an bean, but we get lots de udder stuff, soup, feesh, bif steak, an poudine.

Some time we have to wait leetle wile for more grub an dose feller sing den. Dats mak me lonesome for Im tink on de tam wen we sing wen we wait for de drink, but dis tam deres no drink only de black coffee on leetle cup. Jus bout de tam Im commence feel well dose feller quit de eat an one dose officer bring box de cigar. He give me one bout a foot long wats keep me smoke for mos a hour.

Deres tall young feller on de head de table an he turn on nudder beeg feller an say, "you read a minute," but he read for mos half de hour. Den de firs fellers say few word an de gang lif der hand. Den

he say agen, "we talk bout de lumber beezness," and spik on one dose feller.

Im not know dere name but Ba Gosh, dats good bunch de sport, for every one say deres good tam on de lumber beezness.

Dey talk bout de war an beeg price for de lumber now, an more beeger price nex year, an dey tel us deres no stock on de lumber yard en Angleterre, an dat deres lots de place en France an Belgique wat are broke down an have be build agen. Den dey say deres small cut on Canada dis year an Im know dat mesef for Im mak jus bout haf de log I mak las winter an dats small cut too.

De first young feller spik few word after each one tel her story an he spik well too.

One feller tel of her trip on de Wes, on Winnipeg, Calgaree an de Coas, an tel de price for shingle, siding an lots de ting.

Nudder feller talk bout boosting tings here, an dat word boosting mak me sad agen, for dats de word de feller use wen he boost my monee out ma pocket for Victree Bon.

One man wit leetle poleon on her chin mak verree good spich; anyhow it soun like good spich for all de gang clap dere han.

Nudder beeg mans talk bout de bush an no matter he have trub for get de logmaker an have seekness on de camp, he say deres be good tam on de Spring. He mak me feel good agen for I know deres more as me have trou on de camp.

All dat gang have someting for say wen de young feller ask her. Some not say much but wat dey say are "good courage, an don trow your stock over de side, for you haf get some more nex year."

Ba Gosh dats fine bunch de feller, an bout de tam we go on our bed on de chantier, de young feller say someting bout close de meeting an we all stan our feet an seeng God Save de Keeng.

De Boss he tak me out an come on de station wit me an buy me bed on de sleeper but dose sleeper bed not made for chantier mans an after Im leave de town Im go on de smoker room an smoke, an count ma monee, an tink of de good tam Im gone have nex year. An Im gone sleep an dream deres beeg feller wit tree teet on hees mout, an beeg black face, catch me an mak me buy nudder Victree Bon an jus bout wen Im gone tel her "go to de dev" Im wake up and de officer on de car say we come on Coteau.

Bien a vous, Casper Lamarche.

Lac au Loup, Quebec.

Personal Paragraphs of Interest

Wm. Leak, of Toronto, left a few days ago for California, where he is spending the winter.

W. D. Lummis, of Toronto, is on an extended business trip to British Columbia and will be absent several weeks.

P. C. Walker, of Shepard & Morse Lumber Company, Ottawa, recently spent a few days in Toronto calling upon the trade.

Walter C. Laidlaw, of the R. Laidlaw Lumber Company, Toronto, returned recently from a two weeks' successful deer hunting expedition at Nairn Centre, Ont.

H. S. Perkins, of Calgary, representing the Mountain Lumber Manufacturers' Association of B. C., who spent some weeks in Toronto, has returned to the west.

Hugh A. Rose, of Toronto, representing Mason, Gordon & Company, has returned from a business visit of several weeks throughout Quebec, New Brunswick and Nova Scotia.

T. M. Lewis, of Toronto, representing Knox Bros., who are eastern representatives of the Victoria Lumber & Mfg. Company, Chemainus, B.C., left recently on a business jaunt to the coast.

L. D. Barclay, of Toronto, eastern representative of the Canadian Western Lumber Company, has been on an extended business trip to the principal towns and cities in the Maritime Provinces.

E. R. Sutherland, after spending several weeks in Toronto and other points in Ontario has returned to Winnipeg. Mr. Sutherland is salesman for the Otis-Staples Lumber Company, Wycliffe, B.C.

Hon. William Currie, managing director of the Continental Lumber Company, Limited, River Charlo, N.B., and Speaker of the New Brunswick Legislative Assembly, spent a few days in Toronto recently.

H. A. Hamilton, accountant for Hart & McDonagh, Toronto, who was seriously ill for several weeks, is able to resume his duties, which were looked after in his absence by C. C. Jackson of the travelling staff of the firm.

J. P. Johnson, of J. P. Johnson and Son, and P. J. McCormack, of the Canadian Western Lumber Company, Toronto, recently returned after enjoying a deer hunting expedition in the vicinity of Kinmount, Haliburton county.

Henry Sorgius, of Three Rivers, Que., manager of the St. Maurice Forest Protective Association, and Ellwood Wilson, of Grand'Mere, Chief Forester for the Laurentide Company, were in Toronto recently on important forestry matters.

H. A. Leak, of Leak & Company, Toronto, recently returned from an extended business trip to the Pacific Coast. He visited a number of Mountain and Coast mills and reports that they regard the outlook for business in the spring as very good.

Sir Henry Egan, managing director of the Hawkesbury Lumber Co., Ltd., and J. B. Fraser, president of the Fraser-Bryson Lumber Co., Ltd., have been elected members of an advisory board of the Ottawa branch of the Royal Trust Company.

R. B. Miller, formerly of the University of Toronto, is now with the Yale University School of Forestry at New Haven, Conn., and is at present lecturing on forest management and state forest law. In a few weeks he will spend some time on special work in forestry. Mr. Miller has many friends in the lumber industry who will be pleased to hear of his progress.

Geo. Oakley, of Toronto, has been elected chairman of the Association of Canadian Building Industries, which was recently organized and will have its headquarters in Ottawa. The new organization is composed of general contractors, sub-contractors, supply men and others, and all builders' exchanges have been asked to affiliate and co-operate with the new national body.

Word comes from San Francisco that A. L. Williams, of C. Leary & Company, one of the largest lumber-dealers in the British Isles, who is studying the timber situation in the west, stated that Great Britain must have 500,000 new houses and that many hundreds of thousands of new houses must also be built in France and Belgium. He says that the bulk of the lumber required for this purpose will come from the Pacific Coast. Mr. Leary recently paid a visit to Toronto and called upon a number of leading members of the trade.

A. L. Naylor, a member and director of the Naylor-Osborne Co., Ltd., of Essex and Sandwich, Ont., passed away recently from typhopneumonia, following a short attack of influenza. He was the youngest son of Mr. and Mrs. C. E. Naylor, of Essex, and was in his 30th year. He was married in 1914 to Miss Gladys E. Van Every, who survives him along with an infant daughter. The late Mr. Naylor was a prominent member of the Methodist Church, and was actively connected with its different organizations. His passing is deeply deplored by a wide circle of friends.

Capt. Douglas Weir, late of Montreal, who was in charge of the Forestry Department, with headquarters in London, England, died

recently. He leaves a wife and infant son, and was a victim of influenza. Capt. Weir enlisted at the outbreak of the war, and in view of his special qualifications was first attached to the Permanent School at Quebec as an instructor of officers in training in Forestry and Veterinary Science. Later he was in charge of the detachment of the Army Service Corps at Halifax which went overseas in June, 1916, and upon its disbandment in England he was placed in charge of the Forestry Department, with headquarters at London.

Watson Griffin, superintendent of the commercial branch of the Department of Trade and Commerce, Ottawa, addressed a large gathering at the Board of Trade, Montreal, on November 22, on the subject of export trade. He referred to the great opportunities now presented, and warned merchants that they must rely largely on individual effort in competing for world trade. He was of opinion that there was more to expect from vigorous selling campaigns by manufacturers than by depending upon government assistance. A large number of moving pictures of Canadian natural resources and industries were shown. These included logging operations and the manufacture of lumber in British Columbia, together with scenes of the building of wooden vessels.

The many friends of Geo. B. Nicholson, M.P., of East Algoma, who is a member of the firm of Austin and Nicholson, lumbermen and general contractors, Chapleau, Ont., will sympathize with him in the loss of his only son, Lieut. Lorne Weller Nicholson, who was recently killed in action. He was only 23 years of age, and went overseas with the 227th Battalion of Sault Ste. Marie, being later transferred to the 4th C. M. R.'s. and went to France in 1917. He was wounded with shrapnel in January, but recovered quickly. He was again wounded in April and was in a Canadian hospital in France when it was bombed and more than 300 lives lost. Lieut. Nicholson was then transferred to the Prince of Wales Hospital in London, where, after some months, he fully recovered. He rejoined his battalion on September 29th last, being in the lines continually from that until his death.

Eastern Provinces Look for Good Business

Chas. J. Brooks, of Toronto, eastern representative of the Vancouver Lumber Company, has returned from a business trip throughout Quebec and the Maritime Provinces. Mr. Brooks reports business quiet with most of the firms in the east, but the prospects are bright. He was in Halifax the day that peace was declared and states that the garrison city, which is being rapidly rebuilt, held a most enthusiastic demonstration.

Eastern firms which have spruce deals and were resawing them in order to dispose of the stock, have ceased doing so as it is felt with the early resumption of trade with Europe, there will be an excellent market for deals which were in active demand before the outbreak of the war. Holders of spruce lumber are most optimistic over the requisitions for their product.

Mr. Brooks, who was born in Prince Edward Island, and also worked for a time in the mills at St. John, met many old friends and they all expect an active building season next year. Construction of military hospitals and convalescent homes is engaging the attention of the trade at Halifax and other points.

Canada Will Get Big Lumber Orders

Speaking at the Association of Building Industries in Ottawa recently Hon. A. K. Maclean, acting Minister of Trade and Commerce, and Chairman of the Cabinet, informed the members that arrangements were nearly completed by which very large orders for lumber would come to this country from the devastated parts of Europe. He estimated the building materials necessary to reconstruct France alone at ten billion dollars, but pointed out that it would have to be Canada's part to finance both France and Belgium to the full measure of the materials which will be supplied them. In addition to this, the building program in England called for the construction of between three and four hundred thousand houses, and Canadians, as producers of certain kinds of building material, must participate very largely in this business.

Lumber Employees Lead in Victory Bonds

The annual business meeting and luncheon of the Seaman-Kent Company was held recently in Toronto. Mr. Frank Kent and Mr. J. A. Sinclair, of Meaford, the latter secretary-treasurer of the corporation, being chairman and vice-chairman. At their home town last week the employees of the company, together with all local returned soldiers, who were their special guests of honor, banqueted at the Paul House in celebration of the company's lumberjacks who led victoriously in the local Victory Loan drive, eighty per cent. of the men being themselves shareholders in their country, as bond buyers.

What Canadians Did in Timber Line

They Proved their Mastery Over the Forests in France as Evidenced by the Large Quantities Cut

There are more than sixty companies in the Canadian Forestry Corps scattered throughout France and England. Each one of the corps is capable of performing any description of work which may consist of building huts, aerodromes, making railway ties, tent poles, axe handles, in fact, any wooden thing required by the army, says Frank Carrol, of Quebec, a widely known newspaper man, who visited France and England last summer.

Towards the end of March, 1917, a Directorate of Timber Operations, in France, was organized to take over the work of the Canadian Forestry Corps, presently operating for the British and French armies in French forests.

The demands of the armies for timber were ever increasing and the quantity of shipping tonnage available to handle that timber was decreasing rather than increasing to meet these new demands.

Since that date the production of the Canadian Forestry Corps in France has been steadily increasing, and, from a total of 11,500 tons in March, 1917, made up of 5,500 tons of sawn material, 3,500 tons of

Energetic Members of 80th Company, Canadian Forestry Corps.

Sitting (left to right) Lieut. A. O. T. Beardmore, Toronto (now with 1st Canadian Tank Battalion in England); Capt. G. W. Stoddart, contractor, Bradford, Ont.; Standing—Lieut. E. B. G. Reid, Sudbury, Ont. (formerly of the lumber department of Foley, Welch & Stewart); Lieut. L. R. Avery, Ottawa (son of the late F. W. Avery, Ottawa, lumberman of that city, and for fourteen years in the lumber business in California); and Lieut. R. R. Sparks, Ottawa, Adjutant of the Company, and a former widely known newspaper man of the Capital.

round, and 2,500 tons of fuel, it has steadily grown until in May of this year it had reached a total of almost 150,000 tons, made up of 90,000 tons of sawn lumber, 10,000 tons of round lumber, and 50,000 tons of fuel. During this same period the strength of the corps increased; rising from a total of slightly over 2,000 in March, 1917, to a total of just under 13,500 at the end of May, 1918.

When the work was taken over by the present Directorate there was approximately seven mills being operated by ten Canadian companies, whereas, at the present time, there are fifty-one saw mills, and two re-saw plants, being operated by fifty-eight companies, in addition to which two other companies are specially employed on aerodrome construction work with the Independent Force R. A. F. Another interesting fact illustrating the growth of the corps is that the production for the first six months of the present year was practically 50 per cent. in excess of the production for the whole twelve months of 1917.

During the first six months of this year over 183,000,000 feet of sawn product have been produced, and, if approximate comparative values are given to the quantities of sawn lumber, round timber and fuel produced, the value of the sawn timber is almost 85 per cent. of the total value of the products of the corps. At the present time, sawn lumber is being produced at the rate of over 1,400,000 feet per day, and in order to meet the heavy demands of the armies for standard gauge and other sleepers in connection with their railway construction programmes over 350,000 sleepers are being produced each week.

The main sources of supply of standing timber for this sleeper production are the oak forests of Normandy and Central France and

the immense pine areas of the "Landes," south of Bordeaux. This latter area comprises over 2,500,000 acres of almost flat sand lands, which have been planted with Maritime pine since the end of the 18th century. One of the main sources of supply of sawn lumber, in addition to the sources mentioned previously, is the large fir and spruce forests in the mountains of the east of France, in the Department of the Vosges, Doubs and Jura, which are being largely operated by the Canadian Forestry Corps for the French army. The forests in the former of these Departments are mainly located in mountainous country presenting many difficulties from a lumberman's point of view, and in one case the timber had to be lowered by cable to the mill from a slope of over forty-five degrees.

In most of the operations of the corps the logs are transported from the stump to the mill by railroad, since climatic and natural conditions do not permit of adopting the usual Eastern Canada methods of winter hauling over snow or ice roads, and floating by river or lake from the forest to the mill. About ninety miles of railroad are now in use, including short spurs of standard gauge, and long stretches of one metre, three-foot and two-foot gauge tracks. The cars which are operated by these narrow gauge railroads have been mainly built by the corps and various means of traction are employed, including steam locomotion, petrol tractors and horses.

Thinks Canada Has Big Advantage

A recent despatch from Bellingham, Wis., to an American trade paper, speaks of the influx of Canadian forest products and the need of the American tariff receiving attention. It is declared that British Columbia is reaping a rich harvest in American markets as the result of the favorable workings of the tariff. The despatch then goes on to say: With not a cent of tariff to pay on lumber imported into this country and with the American millman confronted by a Canadian tariff running from 7½ to 47½ per cent., the Canadian manufacturer is doing a thriving business in this country. The first is enabled by this protection to do a business in the United States valued at millions of dollars yearly and in the meantime American lumber producers, seeking in vain for an adequate market for their commercial lumber, are compelled to curtail their production or close their plants. This is the case in many communities of the Northwest, Bellingham among others. For example, because of its inability to relieve the congestion in its yards by the sale of its "side" cut the Bloedel Donovan Lumber Mills has been forced to discharge 300 men during the last six weeks.

Figures secured from the Great Northern by this week speak eloquently of the inroads of the British Columbia lumber manufacturer in the United States behind the high tariff wall which Canada has erected and through the gap which the United States created when it let down by granting outside manufacturers of lumber free entrance to this country. In the light of present events—the closing of mills and the curtailment of the production of others, largely the result of this favoring tariff, lumbermen believe—these figures are peculiarly significant.

The Great Northern's records for the first nine months of 1918 show that through Blaine, Wash., alone 876 carloads of lumber and 1,057 carloads of shingles passed into the United States during that period. This is equal to 22,000,000 feet of lumber and 237,825,000 shingles, on a conservative estimate. The lumber, also figured conservatively, is worth \$528,000 and the shingles, on the same basis, \$736,000, or a total of \$1,264,000. In the corresponding period of 1917 the lumber imports from British Columbia through Blaine were 380 carloads and the shingle imports 405 carloads, showing an increase of 250 per cent. in shingles and more than 200 per cent. in lumber. Thus, more than 200 carloads of lumber and shingles from Canada have passed monthly through Blaine, itself a big lumber and shingle manufacturer, and the influx is unabated. In addition a vast quantity of lumber and shingles pass through Sumas into this country every month.

To northwestern lumbermen the need of an American tariff wall, or at least of a reasonable reciprocity measure, was never more apparent than now. As proved by congested yards and growing imports, the situation in the Northwest is more serious than it has been for months and undoubtedly further curtailment of lumber production will be necessary, and although not all of this can be laid at the door of the Canadian tariff and the lack of an American tariff, a very considerable part of it can be, in the estimation of well informed lumbermen.

Edward Clark, of Edward Clark & Sons, Limited, Toronto, recently returned from spending three weeks looking after affairs in connection with the firm's six camps in Vermont, where a large quantity of spruce, birch and maple will be taken out this season. He reports that labor is much more plentiful in that state since the termination of the war.

The Soldiers' Co-operative Lumber Company

Sir Douglas Cameron,
Winnipeg.

To complete arrangements for launching 1,500 returned soldiers in the lumber business in British Columbia, Sir Douglas Cameron and Thomas Meredith leave Vancouver soon for England, where they will make a personal selection from the men coming home from the war zones. A federal charter is being sought for the Returned Soldiers' Co-operative Lumber Co., Ltd., with an authorized capital of \$1,500,000.

The mills will be operated on a co-operative basis, the soldiers having full share in the management. It is explained that each of the 1,500 returned men should take \$100 in stock.

Returned men only will be employed in the mills and camps and in the agencies which the company proposes to establish

throughout Canada, the United States, Europe and elsewhere. The workers will live in community settlements, and will be paid current lumbermen's wages. The company has secured an option on eight large saw mills in British Columbia with a capacity of 150,000,000 feet yearly, and on timber limits aggregating 5,000,000,000 feet. The provisional officers of the company are Sir Douglas Cameron, president; R. W. Gibson, Victoria, vice-president; Thomas Meredith, general manager.

It was stated recently that many Canadians were interviewed in France on the proposal, and from brigadiers to privates they were enthusiastic.

Assembling the Hulls of Flying Boats

The accompanying illustration affords an interior view of the assembling department of Canadian Aeroplanes Ltd., Toronto, in which the hulls of F-5 flying boats are being assembled. The photograph was taken by the Exhibits and Publicity Bureau of the Commercial Intelligence Branch of the Department of Trade and Commerce and was published in a recent issue of the "Weekly Bulletin."

It is announced that the Commercial Intelligence Branch of the Department has established an Exhibits and Publicity Bureau, which has in charge the preparation of moving pictures for display abroad and the exhibition in Canada of samples of manufactured articles required in countries overseas where Canada has trade commissioners and commercial agents. B. E. Norrish has been appointed supervisor of the Exhibits and Publicity Bureau, and has been given direction over all Canadian Government moving picture work. He has associated with him Arthur E. Reeves, a widely-known moving picture photographer, and a capable staff of assistants. By means of moving pictures of all the important activities from the Atlantic to the Pacific, it is proposed to advertise Canada in every country, and Canadian Trade Commissioners have made arrangements for the exhibit of the films in Australasia, New Zealand, South Africa and the United Kingdom. As lantern slides, in some cases, can be more conveniently exhibited than moving pictures, a series of still photographs for lantern slides is being prepared. One of these still photographs, representing the assembling of hulls of F-5 flying boats at the works of the Canadian Aeroplanes Ltd., Toronto, is shown on this page as already stated. Moving pictures depicting the making of aeroplanes and all the processes from the cutting down of aeroplane spruce in B. C., to the completion of the machine itself in Toronto, have been secured. Similar moving pictures will be taken of other Canadian industries, and it is proposed, in connection with the Canadian Trade Commissioners Service, to enter upon a most extensive propaganda which will make Canadian enterprises known throughout the world.

Pulp Companies Will Employ Many

The Canadian Pulp and Paper Association recently received a request from Hon. G. D. Robertson, Minister of Labor, for information as to the number of additional men for whom the industry can find employment this winter, in view of the discontinuance of war industries and the certain dislocation of labor conditions as a

result thereof. Normally the industry gives regular employment to about 25,000 mill operatives and office employees, and, at certain seasons of the year, to about as many more woodsmen. For the past two years labor, especially of woodsmen, has been scarce and difficult to get. Work can probably be found for several thousand men at the present time, provided they are of the right kind. The industry has contributed about 2,500 men to military service. Most of these men were assured by their employers that their jobs would be restored to them when they returned to civilian life. They constitute a first claim upon the manufacturers.

The Rock Bay Camps Win Honor Flag

Ever to the fore on occasions of national importance the B. C. Mills Timber & Trading Company, the pioneer lumbering concern in the province, and its employees responded finely in the Victory Bond campaign, the total amount subscribed being no less than \$170,000.

The employees in the several logging camps at Rock Bay and Cardero Channel made a splendid response, applications totalling \$64,000 (most of them paid in full) being received from that source, which response was very gratifying to the officials of the company.

The camps are naturally proud of their achievement, for it gives them a larger per capita amount than any other camp situated between Vancouver and the north; and thereby entitles them to the honor flag for the district.

The subscriptions received from the employees of the Hastings mill, Vancouver, together with that from the company, totalled \$106,000, an excellent showing, especially when one considers the fact that a good many of the employees were affected with the "flu," and could not be reached. Thus, with the \$64,000 from the camps, the total amount subscribed by the company and its employees was \$170,000.

The company gave to all its employees who wished to take advantage of it, the benefit of an extended payment plan; and it gladly undertakes all the clerical work in connection with the payments, and the safe-keeping of the bonds. The foregoing facts are evidence of

Assembling department assembling hulls of F-5 Flying Boats Canadian Aeroplanes, Limited, Toronto.

the good feeling and the hearty spirit of co-operation which exists between the company and its employees.

A member of the staff of the company canvassed the Hastings mill employees, and the company facilitated the work of the canvassers of the Victory Loan Committee at the camps in every possible way. Arrangements were previously made for their convenience. They were personally assisted on their rounds by Mr. P. Des-Brasay, the logging superintendent; and the company placed at their disposal the yacht "Davy Jones" for their trip to the company's and other logging camps.

The new tern schooner the Marah, built by the Yarmouth Shipbuilding Company, has been launched at Yarmouth, N.S. The vessel is 158 feet over all, 128 feet keel, 33 feet beam and 13 feet depth of hold. Her net tonnage is 421, the gross tonnage being 472. She is classed in Bureau Veritas twelve years classification.

Spruce Manufacturers of Busy East

Live Organization Formed to Deal with Trade Questions
in This Branch of Lumber Industry

At a meeting of the spruce manufacturers of Eastern Canada, held at the Windsor Hotel, Montreal, on November 26, under the presidency of Sir William Price, of Price Bros., Ltd., Quebec, and the Wayagamack Pulp & Paper Company, it was decided to form the Association of Spruce Manufacturers of Eastern Canada. The objects are to promote the interests of manufacturers and to deal with various trade questions affecting this branch of the lumber industry.

The following were present: Messrs. J. F. Gregory, Murray and Gregory, Ltd., St. John, N.B.; F. C. Beattey, Stetson, Cutler & Co., St. John, N.B.; Richards Manufacturing Co. and Shives Lumber Co., Campbellton, N.B.; Thomas McCarron, River Ouelle Pulp & Lumber Co., St. Pacome, P.Q.; Archibald Fraser, Fraser Co., Ltd., Edmundston, N.B.; W. E. Golding, Geo. McKean & Co., New Brunswick Ry. Co. and River Valley Lumber Co., St. John, N.B.; Hugh Mackay, Malcolm Mackay, Ltd., St. John, N.B.; W. M. Smith, Smith Lumber Co., Woodsock, N.B.; J. E. Merritt, Chaleur Bay Mills, Restigouche, N.B.; Angus McLean, Bathurst Lumber Co., Bathurst, N.B.; R. A. Snowball, J. B. Snowball, Ltd., Chatham, N.B.; J. B. Chouinard, Murray and Gregory, Ltd., St. John, N.B.; J. A. Rousseau, St. Anne, P.Q., and Matapedia Lumber Co., Rimouski, P.Q.; H. R. Vann, Louise Lumber Co., Quebec; A. MacLaurin, St. Maurice Paper Co., Three Rivers, P.Q.; J. L. Christy, Iberville Lumber Co., Sault au Mouton, P.Q.; Walter J. Ray, M. A. Grandbois, Casimir, P.Q.; B. H. Dunfield, Dunfield & Co., Halifax, and Hill and Dunfield, Windsor, N.S.; R. F. Grant, St. Maurice Lumber Co., Three Rivers, P.Q.; I. J. Soy, Christopher Lake Lumber Co., and Maple Leaf Lumber Co., Londonderry, N.S.; W. H. Miller, W. H. Miller & Co., Campbellton, N.B.; F. McEvoy, Sydney Lumber Co., Campbellton, N.B.; Hon. C. W. Robinson, Robert Wright & Co., Moncton, N.B.

The chairman pointed out the benefits of co-operation and the value of getting together for the discussion and defence of their common interests. This was the keynote of the discussions.

It was decided to form the association, Sir W. Price being elected president, Mr. Angus McLean vice-president, with Mr. A. C. Morrison, of Price Bros., Quebec, acting secretary.

The following were also elected as executive committee: New Brunswick, Messrs. A. Fraser, W. E. Golding, J. F. Gregory, A. McLean, W. B. Snowball, W. H. Miller, and F. C. Beattey; Nova Scotia, Hon. C. W. Robinson, I. J. Soy, and B. H. Dunfield; Quebec, Sir W. Price, A. MacLaurin, W. Gerard Power, R. Montgomery, and Ed. Ouellette. Sub-committees were appointed as under: By-laws, Mr. A. MacLaurin, chairman; classification, sawing, specifications, and practical work, Mr. Golding, chairman; contracts, terms, and payments, Mr. Angus McLean.

The head office will be in Montreal.

General McRae Now on His Way Back to Canada

Brigadier-General A. D. McRae, who is a former vice-president of the Canadian Western Lumber Company, at Fraser Mills, B. C., in which organization he is still financially interested, is returning to Canada after some years in England and will spend some time in Toronto. Gen. McRae was Canadian Quarter-Master General and later was appointed director of organization in the new Ministry of Information. Now that the war is over it is likely that the General will remain in the Dominion. He intimates that the armistice which was signed early in November, is no great surprise to the Ministry of National Information, as that body had considerable to do with the bringing about of present conditions and well justified its existence.

Speaking of Gen. McRae, "Canada," which is published in London, England, recently said in part:

General McRae has brought the Quartermaster's department of the O.M.F.C. to a state of very high efficiency, where it can now be safely left in the able hands of Colonel Hogarth, who is promoted to be Brigadier-General.

The General is only 43 years of age, being born at Glencoe, Ontario. His wide and varied business experiences have equipped him with a knowledge of men and affairs which he should turn to good account in his new appointment, as director of organization in the Ministry of Information. Successful in many forms of business enterprise—insurance, banking, lumbering and afterwards land settlement on a great scale—for some years prior to the war he had resided in Vancouver, where he was the controlling brain of many important undertakings. Immediately on the outbreak of war he resigned all his directorships and offered his services to the Government, who appointed him Lieut.-Colonel in charge of all remounts west of the Great Lakes. He is a noted horseman, and he turned his experience and knowledge to such good advantage that his work was highly commended by the Canadian Royal Commission which was appointed for the investigation of all war purchases.

Review of Current Trade Conditions

Ontario and the East

There are so many perplexing problems confronting the lumber trade at the present time and so many currents and cross-currents in the channels that it is difficult to present any very clear view of the situation. The feeling of the wholesale trade with respect to the future conditions and the need of fostering wider markets with the Mother Country and Europe in order that Canada may get her fair share of the material that will be required in rebuilding the shattered war zones, are pretty well set forth in the report which appears in another column of the "Canada Lumberman." It will be seen that the keynote is optimism. Good business is bound to follow, and builders everywhere are talking of a revival of conditions such as has not been witnessed since 1913. Various industrial plants will make extensions, more conveniences of life for the farm, the house and the factory will be turned out, into all of which more or less wood enters and has to be purchased.

Scanning the horizon there is everything favorable in the way of what is known as good times in the lumber business, now that the shipping restrictions which went into effect about the middle of September and cut off United States business to a very large extent have been removed. There is now perfect freedom of transportation and owing to the greater supply of labor there is not likely to be any car congestion this winter. The traffic situation last spring was at its very worst, but there will be no repetition of this undesirable state of affairs if the railway war boards are able to gauge accurately the outlook.

Stocks all over the country are low and there is a disposition on the part of every prescient member of the trade to hold fast. They see no reason why lumber should come down unless certain persons are seized with cold feet and do not stop to consider replacement values. There is no immediate possibility of the cost of production going down to any great extent. Woods operations and wages are heavier than last year and the only probable reduction in the productive end is that there may be a drop in the sawmill labor, say six months from now. This, however, is a long way off and the part played by the labor at the sawing end as compared with the cutting, skidding, driving and towing is only about 40 per cent., the latter constituting 60 per cent. of the outlay. Help is more plentiful, but the release of men suitable for the woods comes at too late a date to be of any particular benefit, except in the way of efficiency, for this season. Wages are well maintained and the cost of all camp supplies goes up the while.

What is tending to make some members of the trade take a rather sombre view of affairs is that the end of the war happened to synchronize with the usually quiet months of November and December, when there is generally not much stock moving. Under ordinary circumstances the transient tranquility would be accepted as a matter of course, but when attention is forcibly directed to it by the sudden cessation of European hostilities there have been a few timid ones prepared to throw up their hands and declare that there is nothing immediately ahead but stagnation or depression. It is inevitable that there will be a period of transition from the old order of things to the new order engendered by peace. The dislocation and realignment cannot be effected without the disturbances of certain branches of the trade. It is stated that from 70 to 80 per cent. of the products of the forest have been going into munition boxes, aeroplanes, escort wagons, trucks, military camps, etc. This is just the proportion which formerly went into building operations and the change from a war basis to ordinary normal requirements cannot be affected without some visible jolts.

There is no doubt that domestic consumption will take up any slack left by the reduction of government requirements, but it will not do so at once. A little patience and courage are required to bridge the chasm. There is every assurance that the future is one that is bright in all respects for the needs in European countries for lumber will be very great. Shipbuilding activities will go on uninterruptedly and if Canada grants credits to devastated Belgium and France to the extent of \$500,000,000 each, it will mean that the call upon the Dominion to supply building and other material will usher in an export business such as has not been witnessed during the past decade.

Careful observers of the situation declare that as soon as the readjustment now beginning is finished, there will be greater activity than there has been for many moons and it is predicted that the greatest period of prosperity that the lumber industry has ever experienced will be forthcoming, if only patience is exercised. Confidence begets confidence and if clear vision is maintained and a hopeful spirit holds sway there is no doubt that everything is bound to come out en-

couragingly. Naturally there is some hesitation at present and a disposition to mark time, but the after-the-war effects will be such that before this month next year those, now giving away to pessimism and despair, will regret that they did not wear the smile that wins its way in everyday affairs of a life as well as in the struggle for business supremacy.

Great Britain

There is not much that can be said at this juncture regarding the timber trade until it is definitely known what the shipping facilities will be in the way of ocean tonnage and whether the present government control will continue for any lengthy period. Speaking of the present rationing system the Timber Trades Journal says that it will probably be several months before there will be any release and it is well that such supervision should prevail. But there is a fly in the ointment, and here it is: At present nearly all trades are in much the same predicament, some better controlled than others, but all hampered by the centralization of commercial operations in too few hands. This centralizing policy is the root of the trouble. Its consequences are that intricate and elaborate systems have to be invented for organizing and checking the work; little or no discretion can be allowed to individuals, and we are afraid that it makes very little difference whether the administration is in the hands of business men or of government officials. This last unfortunate fact is borne out by the timber control itself. The great majority of the employees both at the Control offices at Newman Street and at the Government buyer's office at Salisbury House are men of experience in the timber trade; but they are now mere cogs in the wheels, and although their individual excellence may help to give the machine a better appearance and make it run more smoothly, yet they can only perform their allotted tasks, and have no power to alter the real nature of the machine's work; they may do their tasks well, but whether these tasks are of utility or not is not theirs to decide. Many members of the trade have lately been giving thought to this question, and as they have all come to the conclusion that free competition will for a time be out of the question, the necessity of devising some better scheme than the present is very strongly felt. There are several vital points about which the trade should be given some information. In the first place, as regards importing; will the British importers be, as of old, in competition with the Continental firms, or will there be co-operation between them? If the latter, as is probable, then there must almost necessarily be central buying. But the British trade wishes to take a larger and more responsible share in the purchasing than it is permitted to do at present, and to bring this about its members will have to co-operate with the timber importers in France, Belgium, and Italy. This will make it necessary for the merchants in these countries to organize and to appoint representatives. In short, if for a while international buying of timber is essential, the trade itself should be prepared to undertake the work. We believe ourselves that this inter-allied buying may be almost taken for granted; and, as far as Great Britain is concerned, if trade representatives were appointed to look after the needs of the different ports, the first step, that of importing suitable wood to the various districts, would be solved.

The price question will be tremendously difficult, but as purchasing prices will almost certainly be fixed, in conjunction with our Allies, the selling prices in this country must obviously be limited; for the great bulk of the wood at first imported will be for national purposes, such as housing schemes, &c., in which the Government will be financially interested. This brings up the vexed question of rationing. Free competition being relegated to more normal times, and the available supplies of wood being far below the demands and not capable of satisfying them all, rationing of some description seems to be inevitable. For if no rationing were attempted, to whom is the wood to be sold when there may be half a dozen claimants for it, and all offering the maximum price? Liverpool advises are that the general situation of the market is unchanged. The tone is quiet, and there is only a small amount of business passing through. The chief items of trade consist in supplying Government orders, and private business is almost infinitesimal. The majority of importers are experiencing a hand-to-mouth existence, and so far as the future is concerned there appears to be no relief from the present situation for some time after the war is over. It may be said that the timber trade is in no worse position than that of any other trade, and that business will develop again in the course of time; but meanwhile it is extremely disappointing to look back to the exceedingly prosperous days prior to the war, and to consider

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

how long it will take before these good old times will come back again. In the first place, there will not be any great increase in the volume of trade until prices come down to a reasonable level. To attain this object the imports of foreign-grown woods will have to be considerably multiplied, and importers must be allowed to trade freely without having to obtain licenses ere they can bring forward their shipments.

United States

The restrictions which have curtailed the general commercial lumber business since the beginning of the war have been lifted. One of the first to go was the embargo placed on all shipments of forest products east of the Mississippi river and north of the Ohio and Potomac rivers. It will not be long before the industry is as free as ever. One of the latest announcements is that the restrictions on the manufacture of furniture which were to have become effective on December 1st have been withdrawn by the War Industries Board. All building regulations have also been lifted. The market has naturally been quiet and buying has been rather limited, but there is a general feeling of confidence that there will be no abrupt changes in the volume of business and that as government orders taper off commercial orders will increase. Spruce and airplane operations have been suspended. The steady gait of national life is now being resumed and the labor situation is improving rapidly. Stocks at the mills were probably never so low as at the present time, and this year's cut will be less than that of last season, which should tend to stabilize prices.

A hopeful view of both domestic and export trade is taken by the various lumber bodies, and in a recent market letter sent out by the Hardwood Manufacturers' Association, it is pointed out a lull of perhaps sixty days is inevitable. Industries have pursued the policy of carrying a much smaller stock than was generally true in pre-war

times and there should not be the slightest doubt that cessation of hostilities will prove ultimately a tremendous stimulus to the demand for hardwood lumber.

It may take a little time to bring about the readjustment, but it is sure to come, and as soon as the readjustment now beginning is finished there will be greater activity than there has been for many months, and the greatest period of prosperity the hardwood lumber industry has ever experienced is predicted; for that reason lumbermen should be patient.

A Reconstruction Conference of the Industrial War Service Committee will be held this month at Atlantic City to consider various problems that confront the nation, and in this connection an exchange says: The readjustment of prices and wages also presents a serious problem. War prices and war wages cannot be continued. This is particularly true of industries which produce for export. If we are to build up our foreign trade in the markets of the world, we must produce so that we can sell on a competitive basis with other countries. We cannot do this and pay the wages which have ruled in industry during the war. But wages cannot come down unless the cost of living also comes down. Otherwise, the purchasing power of millions of citizens will be impaired.

An interesting despatch from Washington is the announcement of the removal of all remaining restrictions on non-war construction by the War Industries Board. All building operations of whatever character may now proceed without permits either from the Board or the State Councils of Defense. This action was taken on recommendation of the building industry and the state councils of defense. No estimate has been made as to the value of building projects held up during the war, but officials expect that resumption of work will afford employment for thousands of workmen now being released from war industries.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Conditions Are Quiet in St. John Market

The war is over, but it has set the manufacturers to thinking more seriously than ever. What is going to happen to his business? This applies particularly to the lumber merchant who at the present moment has large crews in the woods getting out a cut of logs to be manufactured during the coming year. Always has the lumber manufacturer been forced to gamble a year ahead, but not always has it been so uncertain as during the past two years. To-day the lumber manufacturer is marking time in so far as sales and shipments at St. John are concerned, as no arrangements have been made at the present writing for shipments to Great Britain or France by steamer.

The Government's claim to day is that the war is not entirely a settled question, and boats cannot be relieved which are fitted up for the work and may yet be needed; therefore all that can be done is to await developments. No prices are being offered; neither are the deal merchants keen to buy at any price.

Local building is at a standstill and any Government work is being held up. All military work is also being held in abeyance and will, no doubt, be cancelled as soon as definite peace is proclaimed. So just at present we must wait both for a demand and a price. Very little can be said of the American market. It is dead, and practically no Canadian goods are moving to lumber centers and no inducements are being held out by the purchasers for the large lumber yards that any orders will be placed before spring. Prices remain unchanged, but as no business is offered the price cuts no figure. Laths, shingles and short stock are in no great demand. Locally shingles are good and prices are fair.

Ottawa Expects Prices to Hold Firm

Very little change has taken place in market conditions and much speculation is going on with respect to demand and prices, present and future. The embargo on shipments to the United States has been lifted and the Imperial Munitions Board has notified woodworking plants to cease shell-box manufacture.

Taking conditions as they stood the indication, based on reports from well-informed sources were that the spruce market was going to soften and that most of the trading to be done for the next few months will be in pine stocks. The demand for pine remained firm and prices kept up. Spruce did not have the same demand as a month ago.

A new era of building in the United States and Canada, dealers believed, would follow the war, and would begin to assert itself in the spring months. If such a revival comes about sash, doors,

frames, and interior fittings will be in strong demand, and consequently stock for building purposes should, at least, hold their present price.

All international conditions were most difficult to gauge or brightened with the lifting of the embargo, but the prospect of European or Continental business did not brighten in the same measure.

The consensus of opinion of shippers to the English market was that little relief could be expected before the end of February or the spring months. For the next month or so they look upon the season as being usually a bad one for the transportation of stocks. Then again they have no assurance that the embargo to England is to be immediately lifted or the British Government go out of the lumber business.

Even if such a circumstance came about at once the lumbermen have no guarantee when they will receive bottoms if they cared to ship in the winter months. Lumbermen believed food and other necessities to the warring countries would continue to get priority for many months to come.

Outside of spruce for domestic purposes, such as shell box manufacture there was nothing whatever to warrant any decline in price. In fact the whole outlook was, outside of the spruce market, that lumber prices would remain absolutely firm for the next six or twelve months to come.

With the Ottawa and most of the Ottawa Valley mills the log production season, though it has been under way for only a short time, is already three weeks or one month behind, due to the influenza epidemic. When the camps were established, supplies put in, and the workmen were employed, it was all done on the prin-

Give Them all the Milk They Want

There is no milk problem in camps where Klim is known. There the men have as much milk as they could have in their own homes. Plenty of the best pasteurized separated milk at every meal—as pure and fresh as the hour it left the farm. They drink it, they use it in tea and coffee, and in cooking and baking, and enjoy the natural, genuine flavor that proves its unaltered purity.

You should have Klim in your camps. Your men need the body-building food value of this milk. There is no other form in which you can supply it so pure or ship it so cheaply. Klim costs less than any other form of milk, it bulks smaller, costs less to transport and means absolutely no waste. It is easily the most economical.

Klim is genuine—the flavor proves it—Drink it.

Sale of Saw Mill Timber and Farm Lands

Tenders will be received at the Head Office, Henry Wise Estate, St. Catharines, Ont., until Dec. 30th, 1918, for the sale of the following Timber and Farm Lands, also Saw Mill, lying at and in the near vicinity of the Village of Craighurst, County of Simcoe, at the convergence of the Townships of Medonte, Flos, Oro and Vespra.

TOWNSHIP OF FLOS (approximate)

- Lot 42, Con. 2, 100 acres, 95 of timber.
- Lot 42, Con. 1, 100 acres, 70 acres cleared and under cultivation, new barn, silo and house.
- Lot 43, Con. 2, 100 acres, 30 of timber.
- Lot 44, Con. 2, 100 acres, 25 of timber.
- Lot 46, Con. 1, 100 acres, 30 of timber, 70 of wood.
- Lot 47, Con. 1, 100 acres, 30 of timber, 70 of wood.
- Lot 41, Con. 1, Village Lot with Boarding House.

TOWNSHIP OF ORO

- Part of Lot 37
- Part of Lot 38 300 acres, 200 of timber.
- Part of Lot 39
- Lot 5, Con. 4, 60 acres, 30 of wood.

TOWNSHIP OF VESPRA

- Lot 35, Con. 2, 100 acres, 10 of timber.

TOWNSHIP OF MEDONTE

- Part of Lot 11, Con. 6, 125 acres.
- Lot 51, Con. 1, 100 acres, 20 of timber.

MILL, CIRCULAR (Capacity)

- Hardwood, 25 M.
- Hemlock or Pine, 50 M.
- Two 85 H.P. Boilers.
- Steam fed, automatic saw sharpener, completely outfitted with all necessary equipment to begin operations.
- Highest nor any tender not necessarily accepted.

Henry Wise Estate
St Catharines, Ont.

ciple that the war was "going on." Consequently high cost conditions in the logging camps will at least prevail for this season's cut. It will take upwards of a year, at least, to convert the logs into lumber. Stocks are already low and this season's cutting programme mapped out months ago, has been seriously hindered. Consequently if a heavy European or continental demand springs up suddenly there is little or no prospect of the market being flooded with "cheap" lumber. Any such supply is not now in sight and is not likely to be seen or heard of within the next year.

This year, beyond a doubt, unless there is a large migration of released munition workers to the woods, there will be one of the lowest log outputs that Ottawa Valley companies has witnessed for many years. Though some of them may attempt it, it seems a futile effort for them to try and catch up with the woods programme they carried on in pre-war years, and their chances of getting the stock down to the sawmills and having it ready for sale are not now seemingly any better, if as good, as one or two years ago.

The whole sum and substance of the situation is that the stocks required, if the European demand suddenly asserts itself, is that the stocks are not going to be here to meet it. Not only for the spring months but for the fall months of 1919 as well.

The general outlook, so far as representative lumbermen cared to forecast, it may be summed up as follows: Little chance of shipment to the English market before the middle or end of February. Very small improvement looked for in Canadian domestic trade before the spring months. Outlook for factory conditions after Christmas not very bright and prospect of late winter months rather discouraging.

So far as the shipment of stocks went, they moved a little faster to the United States than during the previous two weeks. Nevertheless there was perhaps on hand a greater quantity of lumber awaiting shipment than during a corresponding period a year ago. This could hardly be looked to as an exceptional or substantial increase in sales during the fall months. Rather the operations of the American embargo ended to keep the shipments back. Briefly, the lumber was sold this year the same as last, but it could not go forward as fast.

Hence its accumulation at the shipping point. Rail transportation remained good. Shingle and lath were slow. Inquiries and orders from the United States were about the same as during the previous month, or if anything, picked up a little.

W. C. Edwards Company reported bush operations being about one month behind, due to influenza epidemic. The closing of the mill at Rockland afforded additional labor, which was sent to the woods. Log making for this season's operations, it was intimated, would represent an increase of twenty-five per cent. over other year's operating expenses.

The John R. Booth sawmill closed during the second week of November. Jackson Booth believed that as soon as European transit opened up there would be a heavy demand, considerable of which would be for 3 in. pine, and grades normally going to the English market.

D. G. Gilmour and Co., lumber brokers, reported that the outlook for export business appeared bright. For the last two weeks orders and inquiries were rather quiet. The demand from the United States was mainly for a little spruce and some pine.

John A. Belford, lumber broker, reported that the tendency was that the price of spruce would fall, but that the pine market was going to stay firm and be the market to buy in. Three in. stock, he believed, would be in good demand when the European market opened up.

Will Widen Export Business in Paper

As first steps in the plans of Canadian pulp and paper producers to enlarge their foreign markets, now that the ending of the war gives promise of better shipping facilities, the Canadian Export Paper Company, Limited, the foreign selling agency of some of the big mills, announces the conclusion of arrangements for the further development of trade with South America and Australasia.

George F. Steele, General Manager of the company, in discussing the outlook for continued expansion in Canadian exports of paper, stated that he believed a promising market was opening up in South America, and with that in view, the Export Company had recently concluded arrangements with one of the largest trading organizations in South America, whereby it would become the exclusive representative of the export companies for the products it had to sell.

As to Australasia, the company has been represented by its own agencies right along, and before the war a company like Laurentide had been a large exporter to Australia and New Zealand. The shortage of ocean tonnage had reduced the volume of the business during the war, but the Export Company believes that a new period of expansion is now opening up. Because of this, the Export Com-

Montreal Awaiting After-War Developments

For the moment, trade in Montreal is slow. The feeling of uncertainty as to what the immediate future will bring forth is having a very marked effect on business. Firms just now are not in a mood for buying, except for absolutely immediate needs. Hitherto the demands for making shell boxes for ammunition factories and for other war purposes have made up, to a large extent, for the paucity of orders for construction, but these are now cut off, with the result that practically in every direction there is an absence of business.

There is a general belief that the lumber trade is faced with a period of dullness until conditions readjust themselves—until we get more light on what the Government will do in the way of meeting the situation. Reliable firms, manufacturers and wholesalers are not willing to take a leap in the dark; their policy will be one of watchful waiting. At the same time there is no expectation that prices will fall. As one manufacturer put it, "they cannot fall; the expense of manufacturing is such that there is no margin for any drop in prices. The cut, too, will be small, and I believe that the market will be a strong one."

While conditions may be adverse for a short period there is a feeling of optimism as to the market in the spring—a feeling of confidence that we shall witness a revival of buying, prompted by increased commercial activity. Practically every wholesaler spoken to took a very hopeful view of the outlook, although admitting that there will likely be a period of readjustment.

This also holds true of the export branch. The season is now closed, and from the point of exporting for commercial purposes it has been the worst experienced. A considerable amount has been shipped on Government orders, and a very large quantity of B. C. fir and spruce has also passed through the port for Government account. While it is impossible to say what amount of space will be available next season, there are anticipations that the Government will not overlook Canada when the question comes up of placing orders and furnishing ships to replenish the stocks required in the United Kingdom and France and Belgium. Through the Imperial Munitions Board the British Government recently asked prices from exporters of large blocks of 2 to 4 in.

spruce deals, 6 ft. and up. The British Government have also been making inquiries as to the placing of very extensive orders for B. C. fir. At present it is pretty much in the nature of a guessing competition as to how makers will shape, but those who are interested in this branch of the lumber business are pretty sanguine that we shall soon witness a resumption of the old time activity in shipping stocks to the United Kingdom.

Exports of pulpwood, pulp and paper continue to expand. The figures for the first six months of the fiscal year exhibit remarkable gains in pulp wood and chemical pulp, as under:

Paper	\$11,298,689	\$18,074,595	\$22,221,644
Pulp chem:	5,957,305	9,492,734	15,903,189
Pulp mech.	2,784,751	4,140,819	2,512,086
Total	\$20,040,745	\$31,708,168	\$40,636,919
Pulp wood	4,100,360	4,566,786	9,327,901
Total	\$24,141,105	\$36,274,954	\$49,964,820

During September the total was \$7,689,134, compared with \$7,456,552 in 1917. Pulp wood increased from \$1,115,884 to \$1,217,635; paper from \$3,323,910 to \$3,549,837; and chemical pulp from \$1,742,228 to \$2,584,097; while mechanical pulp decreased \$1,274,470 to \$337,565.

Help Scarce and the Cut Limited

The Bathurst Lumber Company, Bathurst, N. B., state that they have sufficient pulpwood on hand to carry them through the winter season. They add that the supply of labor for camps in the woods is limited, and that conditions are far from being satisfactory. Men were scarce when logging was started a few weeks ago, but since the epidemic of influenza struck the province, camps in many cases, have been practically depleted. It is a question whether the companies are going to be able to get men to go back into the woods for making logs. The company state that there is no doubt at all but what most of the mills in the portion of the province around Bathurst will have but little to do next year. In regard to the pulp division of their business, the Bathurst Lumber Company declare that they are not making any additions at the present time and so far as the demand is concerned it is very good.

European Trade Should Be Heavy

Lumber Exporters However Declare the Chief Difficulty is That of Ocean Tonnage Which is Uncertain

There is a general feeling among Montreal lumbermen that Great Britain, France and Belgium will look to Canada for heavy supplies for reconstruction purposes. Stocks are very low in Great Britain; one of the largest exporters stated that the firm's yards have been bare of stocks for fifteen months, and that the space has been used for raising potatoes. Instead of a normal stock of from 14 to 15 millions, there has not been a stick in the yards.

Of course enormous quantities of lumber have been used in Belgium and France for war purposes, and it is possible that these can be turned to account, to a certain extent, for reconstruction purposes.

The question of tonnage is a difficult one, depending upon the action of the British Government in releasing vessels for commercial purposes; and as to neutral bottoms, as to whether they will not be engaged in European trade. How much stock has Norway and Sweden? Will Russia be able to release any lumber? Norway and Sweden are nearer to the European markets, freights are cheaper, and lumber should also be cheaper. But against these may be set the fact that the demand is almost certain to be very heavy, and that Canada will, as heretofore, obtain a good share of the business.

One explorer stated that in his opinion, little dependence can be placed, in the immediate future, on space in liners which, in normal times, took the bulk of the lumber from Montreal. There would be a comparative small amount required to cover grain, and that exporters would have to look to tramps to carry the largest tonnage of lumber. His firm were already on the market for tramps. Freight, it is assumed, will come down to an appreciable extent.

The shipping season for Montreal is now over. Those spoken to confessed that their views are largely guesswork—were all unknown factors, such as the extent of the demand, the action of the British Government re shipping, etc., which has to be reckoned with. There is also the question as to whether foodstuffs will be given priority over lumber.

There is little optimism in shipping circles as to the immediate prospects of readjusting and regularizing their old-time passenger and

freight services until demobilization is over. Already there have been promises made by the Imperial Government of ships to be returned to their owners, which have been rescinded within a day or two.

"It is quite impossible to get out any schedule of our sailings," was the announcement at the Canadian Pacific Ocean Services, "for we ourselves do not know from day to day what ships will be at our disposal."

The same story is heard in several quarters, and although various steamship companies are "hoping" to get vessels back into regular service, they confess that they may be baulked of their hopes at the last moment. It is not only the task of transporting troops that now makes a demand on tonnage, but the shipping of food to Europe, and for this reason it is not expected that passenger traffic will develop much until the spring.

Very Expensive Season in the Bush

Writing to the "Canada Lumberman," from the district around Thessalon, Ont., a leading woods operator says that the present season is a very expensive one for lumbering operations and is regarded by many as the most expensive of any in the history of the industry. Men's wages are high and labor is very hard to get. Supplies of all kinds keep increasing in price, but this is not all. It has rained in the Thessalon district almost continuously for the last ten weeks with a result that the woods are flooded. Last, but not least, the influenza broke out in the camps and almost crippled operations in some places. There will be a falling off this year in production of about 50 per cent. Some of the largest operators are doing very little while others have cut down the winter programme to the minimum.

Good Work of St. Maurice Association

During the past season there were 93 fires on the territory under the jurisdiction of the St. Maurice Forest Protective Association, Ltd., Three Rivers. These were divided as follows: Lightning, 3; river drivers, 10; sectionmen, 5; railroad, 31; jobbers, 3; settlers, 7; trappers, 1; cache keeper, 1; portager, 1; old fire, 1; improvement gang, 1; and unknown, 29. The fires burnt an area of 346 acres of merchantable timber. The cost of extinguishing these fires will amount to less than \$1,000. The cost of patrolling for the past season will be about 1-3 of a cent per acre.

YOUR opportunity in Wood Pulp

Every Canadian Saw Mill or Plant could profitably take advantage of this opportunity. By installing an inexpensive Kraft Soda Mill, all the slabs, tops, bottoms and waste wood may be utilized to produce Wood Pulp. We can place long term contracts for all that Canadian concerns are able to supply. The Swedish supply is practically cut off and Canada has a free field for this business. We will be pleased to send you details of this opportunity.

EDGINGS

Ontario

Fire recently destroyed the planing mill and carpenter shop of the Peterboro Planing Mill, Dublin St., Peterboro, Ont.

A meeting of the Georgian Bay Log Picking Association was held in Toronto recently, at which there was a large attendance of members. Only routine business was transacted.

The Armstrong Lumber Co., Port Arthur, Ont., have purchased property on the Lakefield Shore, near the Government Wharf, on which they contemplate starting work at once on the erection of a large lumber mill.

John Drake, Clairngorm, via Strathroy, Ont., will rebuild his sawmill which was completely destroyed by fire recently. The loss is estimated at \$4,500. The owner will be in the market for machinery and equipment.

Sir Clifford Sifton of Ottawa, who for several years past has been chairman of the Commission of Conservation, has resigned. As chairman of this important body since its inception, he has been personally responsible for its policies.

The Board of Trade of Cochrane, Ont., has passed a resolution urging upon the Ontario Government to extend the Temiskaming and Northern Ontario railway from Cochrane to James Bay. It is pointed out that the continuation of the line would tap a country rich in pulpwood and other timber.

Judgment has been obtained in Ottawa by John Lumsden, president of the Lumsden Lumber Company, Limited, against the Dominion Explosives, Limited, for \$136,000, one of the largest judgments ever obtained in the Ottawa courts. It was for lumber and moneys loaned to the defendants by Mr. Lumsden.

The entire plant of J. R. Booth, Ottawa, with the exception of what is known as the Board Mill, was forced to close down recently owing to a strike of the pulp workers and boilermen, who to the number of about 400 quit work, owing to the refusal of the company to grant an increase of wages which had been demanded.

A charter has been granted to Manson's, Limited, with headquarters in Hawkesbury, Ont., and a capital stock of \$300,000 to own, operate and manage mills and factories for the manufacture of ground wood pulp, sulphate pulp, paper and paper materials and to buy, sell and deal in timber, lumber, pulp wood and products of the forest generally.

Thomas Adams of Ottawa, town planning adviser of the Commission on Conservation, has been engaged for some time on a comprehensive report on housing and reconstruction. The co-operation of the public is invited in making known any cases of bad housing conditions, or hardships due to high prices and rents, and information on these matters should be sent to the Commission of Conservation.

A. E. McMaster, who for the past two years has been secretary-treasurer of the Port Arthur Shipbuilding Company, has accepted the position of secretary-treasurer of the Whalen Pulp and Paper Mills, Vancouver, B.C., and will take up his residence in that city. Previous to his departure Mr. McMaster was presented by the management and heads of the departments of the shipbuilding company with diamond studded gold cuff links and a diamond stick pin.

The Canadian Bond, Hanger & Coupling Company Ltd., manufacturers of the bond "double sure" transmission lines have moved from Alexandria, Ont., to their new plant at the corner of Villiers and Munitions street, Toronto, Ont., where, in addition to an increased production capacity of over one hundred per cent., the company possess the most modern facilities. The company have also purchased ample ground adjoining their new site so that their plant may be extended at any time.

Laforest & Clemow, Limited, have been incorporated with head office at Sudbury, Ont., and a capital stock of \$250,000, to carry on in all its branches a lumber, timber, pulpwood and sawmill business and to manufacture, produce, buy, sell, import, export and deal in timber, logs, lumber, and wood of all kinds and articles in the manufacture of which timber or wood is used. The provisional directors of the new company are L. Laforest, T. Clemow and W. J. Laforest, all of Sudbury, Ont.

P. W. Gardiner & Son of Galt, Ont., recently purchased the retail lumber yard of the Galt Lumber Company, of which the late Thos. Gardiner was proprietor. For the past seven years the firm of P. W. Gardiner & Son have been exclusively engaged in the manufacture of doors and sash, etc., for the wholesale trade. The retail yard will be conducted entirely independent of the sash and door factory. For many years they conducted a retail business in Galt, and are fully conversant with the requirements of the building trade.

The Board of Trade of Port Arthur, Ont., is acting in conjunction with the Industrial Committee of the Municipal Council in the matter of securing new industries for the city. On instructions of the Board a committee will interview J. J. Carrick, ex-M.P., who was in 1916 granted the right to cut pulpwood and other timber on the Pic river concession, to see what progress, if any, he has made towards the erection of his pulp and paper mill. At the same time Mr. Carrick will be tendered the active assistance of both the city council and the Board of Trade of Port Arthur in order to get his enterprise under way.

Eastern Canada

The Caledonia Lumber Company, Bridgewater, N. S., has dissolved.

R. D. Messier, lumber merchant, Montreal, P. Q., has been registered.

A company, one of whose members is S. E. Elkin, M.P., of St. John, is preparing to start airplane manufacturing there and to operate an air transport service between the Maritime Provinces and Upper Canada and the United States.

H. E. Trudeau, Limitee, has been incorporated with head office at Montreal, P.Q., and capital stock of \$20,000, to carry on business as manufactur-

ers of and dealers in lumber and timber of all kinds. Among those interested are H. E. Trudeau, of St. Laurent, and H. G. Lajoie, Montreal.

The Lumber mill belonging to the Cumberland Syndicate, River Hebert, N. S., was completely destroyed by fire recently. The loss is estimated at \$25,000 with insurance of \$4,000. Those interested in the company are J. C. Purdy, R. S. Carter, M. P. P.; Wm. Beatty and R. B. Atkinson.

Thadee Brisson Limitee has been incorporated to carry on business, among other things as general lumber merchants. The chief place of business is at Chicoutimi, P. Q., and the capital stock of the company is \$20,000. The incorporators include T. Brisson, C. Brisson and H. Tremblay, all of Chicoutimi, P. Q.

The statement is made that plans are under way in order to increase the output of the North American Pulp and Paper Company. It is proposed to increase the output of pulp to 300,000 tons annually and to increase newsprint paper to 120,000 tons per annum. This compares with the present output of pulp of 115,000 tons.

To relieve the print paper situation in the United States Director-General McAdoo, in co-operation with Chairman Hurley, of the United States Shipping Board, has arranged for furnishing the necessary ships for the transportation of wood pulp from Gaspe, New Brunswick, to Portland, Me., for the International Paper Co.

The Canada Cabinet Works Ltd., has been incorporated with head office at Montreal, P.Q., and capital stock of \$48,500, to conduct business as woodworkers and carpenters and to produce, manufacture, buy and sell at wholesale and retail all articles made of wood and leather. Among those interested are H. S. Ross, Westmount and E. R. Angers of Montreal.

The Stearns Lumber Company has been incorporated with head office at Montreal, P.Q., and capital stock of \$20,000 to carry on in all its branches a lumber, timber and pulpwood business and to manufacture and deal in timber, logs, lumber and wood of all kinds. Among those interested are M. E. Languedoc, C. Sinclair, J. P. Charbonneau and Wm. Taylor, all of Montreal, P. Q.

Owing to the estimates exceeding the amount allocated to the construction of the storage dam at the outlet of Lake Jacques Cartier, sixty miles north of Quebec, for the Québec Streams Commission, the bids recently sent in have been returned. The dam would be of considerable benefit to some lumber mills on the Jacques Cartier River. It was to have been provided with a stop log sluice.

The Matane Lumber and Development Company has been incorporated with head office at Montreal, P. Q., and capital stock of \$2,000,000, to manufacture, purchase, sell and deal in any and all kinds of mechanically ground wood pulp, chemical pulp, paper, lumber and to operate lumber mills, timber lands, etc. Among those interested are L. A. Cannon and L. Casgrain, of Quebec, P. Q.

The new sulphite pulp plant of the Fraser Companies Ltd., which is now in operation at Edmundston, N. B., will turn out about 150 tons a day. J. D. Jensen, a Swedish pulp expert, who completed the installations for the Fraser Companies, recently paid a visit to Newfoundland, and states that the pulp mills there have been hard hit by the war. In regard to pulpwood the Fraser Companies state that there will be a considerable shortage in this year's cut, but they do not expect that it will run as high as the shortage in saw logs.

Plans were being revived in Montreal recently for building a \$3,000,000 pulp mill in the province, one of the direct developments of the coming of peace. A representative of Belgian capital is working on a plan that was first developed just before the war for the erection of a mill that would produce sulphite pulp exclusively, on the theory that this could be done advantageously without adding newsprint as a co-product. Belgian capital is already represented in the Belgo-Canadian Pulp and Paper Co., and also in the Laurentide Company.

Referring to the outlook of the lumber industry W. Molson Macpherson, President of the Molson's Bank, at the annual meeting said that as a result of a scarcity of labor in the woods this winter the output of lumber next year would show a considerable decline and would be largely increased in cost. While the pulp and paper trade was expanding very rapidly and Canada was taking a leading position in these industries, largely because of her extensive natural advantages in water powers and forests, the wood was being used in such quantities that the replenishing of the forests by re-planting should engage the attention of the Provincial Governments.

Western Canada

Robert Clark, of Hoppington, B. C., passed away recently in Vancouver, from an attack of pneumonia. At one time he operated a shingle mill at Langley Prairie and for the past eleven years had resided in Hoppington.

Work is in progress on the erection of a box factory for the Timms Market Garden Company, Langley Prairie, B. C. The factory will be equipped with up-to-date machinery and will have a complete outfit of planers, resaws, etc., all of which will be run by electric power.

The Pacific Coast Islands Improvement Company, Ltd., has been incorporated with head office at Vancouver, B. C., and capital stock of \$10,000, to carry on business among other things as exporters, importers and dealers in lumber, logs, piles and poles and timber of all kinds.

Sealed tenders are being received by the Minister of Lands for B. C., until December 18, 1918, for the purchase of License X858, to cut 1,019,000 feet of cedar, balsam and hemlock on two separate areas known as Blocks A and B, situated on Rosemary Lake, Range 1, Coast District. Two years will be allowed for the removal of the timber.

H. W. Taber, manager of the Monarch Lumber Company, Regina, Sask., thinks that the end of the war will have little or no effect on lumber prices for some time to come. The recent outbreak of influenza worked hardships with the lumber business in many places in the west for the reason that a large number of contractors' gangs were ill while the farmers were too busy fighting the "flu" to make purchases of building material.

P. G. Bradley, Wm. Bradley, John Renwick and D. R. MacPhee, of Olive Milestone, Sask., have become owners of a timber limit in B. C. The timber consists of over 11,000 acres and is located at Castlegar Junction, about 25 miles west of Nelson. The sawmill is on the property and it is estimated that there is over 15,000,000 feet of timber on the limits, which includes ties, telephone poles and saw logs. D. R. MacPhee has been appointed general manager.

When the Forestry Battalions Went to England

THEY
HELPED
WIN
THE
WAR

THEY
WILL
HELP
YOU
WIN
OUT

Of course they took with them some of our make of Hoisting Engines for Loading and Skidding purposes, and returned men and officers tell us that these Engines have done splendid service in England to help win the war.

The Forestry Battalions appreciate the necessity of using Loading and Skidding machinery in order to economise on manual labor and handle the logs speedily and at the lowest cost.

It is equally important for the Lumbermen in Canada to make use of Loading and Skidding Machinery for the same reasons.

Our Booklet "Suggestions for the Lumbermen," tells many methods of using this loading and skidding machinery, so that any camp, large or small, can find suggestions therein that will be the means of saving money for the lumberman if put into effect.

This Booklet is distributed free of charge. If you have no copy, drop us a card. It will pay you.

Marsh Engineering Works, Limited Established 1846

Belleville, Ont.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent. than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.

According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

Don't Blame the FIRE BRICK

if it fails to give satisfaction. More likely than not you have been using the wrong kind for your particular purpose. A firebrick intended for use in a small hand-fired boiler may not give the same result if used under high pressure boiler with mechanical stoker.

So when sending us your enquiries be sure to specify for what purpose these brick are to be used.

You are sure then of a high quality brick, that is absolutely the best for your purpose.

We Manufacture the Following Well Known Brands

"Elkco Special," "Elk Steel,"
"St. Marys," "Keystone" and "Rotex"

Catalogue is yours for the asking.

PROCTOR QUESTIONNAIRE

If you will answer these questions we will study your conditions and attend to your needs promptly:

- (1) How are you now drying your veneer or other material?
- (2) How many square feet are you drying per hour?
- (3) How many square feet would you like to dry per hour?
- (4) What is the thickness?
- (5) What kind of wood?
- (6) Rotary cut, sliced or sawed?
- (7) What troubles do you have, if any?
- (8) What is the present drying temperature?
- (9) Are you crowded for space?
- (10) How is the material handled to and from the dryer?
- (11) How many men are you employing in drying?
- (12) What kind of steam are you using, and how much?
- (13) Does material run in large lots of one kind or in small lots?
- (14) How much power are you using for drying?

Should you in turn wish to ask questions about Proctor's Dryers, we will gladly answer them. Make a questionnaire for us and we will fill in the answers and mail the blank back to you by return mail if possible.

These refining grinders reduce ordinary ground pulp to an even finer texture for the better grades of wood pulp paper.

Making One Belt Do the Work of Three

IN a big Ontario paper mill this refining grinder drive has been a glutton for belts.

Ten months from 8-ply belts was considered exceptional service.

The Superintendent was finally induced to try Goodyear "Extra Power." We prescribed 7-ply to replace the former 8-ply belt, giving a low initial cost.

Now, after two and a half years, the superintendent writes of continuous, twenty-four hour a day service for all that time.

Just three times the service previously known. Less than one-third the cost.

Further saving—"Extra Power" gave **continuous** service. Only **one** stop to apply **one** belt in two and a half years.

This problem of belting costs is too vital to be decided off-hand. Belt life and belt performance must be balanced against belt price.

Thousands of executives who buy belts on facts, who keep belt costs, are turning to "Extra Power." It is the dominant factor in the belt field to day.

It will be worth **your** while to talk with a man trained with belt problems by Goodyear. It places you under no obligation. Just 'phone, wire, or write any branch

Oldest and Best

HOE

Chisel Tooth Saws

Choice of Lumbermen Everywhere

The even temper of these saws and the fine quality of steel from which they are made have proved Hoe saws reliable for nearly one hundred years.

More than one hundred thousand "Hoes" are to-day successfully sawing lumber in all parts of the globe. The Hoe Chisel Tooth Saw, invented 40 years ago, is still the best for cutting hardwood.

75,000 Feet

A Specialty—Not a Side Line

BAND RESAWS

South Bellingham, Wash.,

Oct. 6, 1917.

Gentlemen:

The Seven Foot Resaw which we purchased of you about a year ago is giving us entire satisfaction. We are getting through this resaw on an average of 75,000 feet of well-manufactured Fir lumber each day. It does its work with such ease that we believe it to be the best Band Resaw on the market.

Yours very truly,

Puget Sound Sawmills
& Shingle Co.

Wm. B. Mershon & Company
Saginaw, Michigan

Saginaw Seven-Foot Band Resaw

WHY

Bond Hangers

Eliminate
Hot Bearings

Ring Oiling

Are you considering the purchase of Hangers for your new factory?

Perhaps you do not realize the necessity of buying hangers that will eliminate hot bearings, or the trouble they will cause in a hanger? If a bearing happens to become hot in a hanger holding six or more machines, and they all stand idle while the shop mechanic fools around trying to fix it, you'd soon realize what inefficiency and expense this is.

The Ring-oiling device on Bond Hangers supplies a constant flow of lubricant on the full surface of the shaft and bearings, which keeps them cool when running at high speed.

Get our catalog containing full details before you buy.

Canadian Bond Hanger & Coupling Co.
LIMITED

Villiers and Munitions Sts., TORONTO, ONT.

BURNOIL ENGINES

Operate Perfectly on Cheap Fuel Oils

No carburetor, batteries or magneto.

No preheating, blow torch or hot surface.

Simple, economical, sturdy. This engine can be run indefinitely at slow speed and then immediately speeded up to maximum power. Just the type needed for continuous towing, rafting and general manouvering. Starts instantly.

Representatives in Eastern Canada:

PYKE MOTOR & YACHT CO., 371 St. James Street

The
Giant

Worm Drive Truck Delivers the Goods

This is particularly true of its service to lumbermen. Its sound construction, and holding capacity render it the most suitable truck for heavy lumber work.

Another important feature of the GIANT Truck is that the cost of upkeep is down to a minimum, because it can be run on cheap fuel.

You will do well to consider the GIANT for your deliveries.

Let us demonstrate its value to you.

USE KEROSENE

The DUNTLEY Hydro-Pneumatic Gas Generator is an exclusive feature of GIANT

MOTOR TRUCKS. With this device the Giant TRUCK may be operated on kerosene or gasoline, at a saving in fuel cost of over 50 per cent.

GRATON & KNIGHT

Standardized Series LEATHER BELTING

Tanned by us for belting use

**GRATON
AND
KNIGHT**

When the Belt Works Right

One ounce of performance is worth a ton of speculation as to horse-power delivery. The best answer in belt performance is when the belt works right—with the utmost of uninterrupted driving energy; with economy written into fuel bill.

Each Graton & Knight Standardized Leather Belt is tanned and built for some specific power purpose. This is where the Graton & Knight standardization idea comes in—belting standardized for every drive.

It may be that you are using an unnecessarily good belt on a certain drive and one not good enough on another. Select a drive in your plant and let us recommend the proper Standardized Belt to use—then

watch the results. When the belt shows you that it is working right, that it is giving all service possible, you will be ready to discuss the matter of applying Graton & Knight Standardization further.

If you have kept suitable records, you know just where the belt losses are in your plant. If not, you are only guessing. Start a belt record. Write us for the necessary cards. Tell us the number of drives in your plant and we will mail record cards without charge. Write also for a copy of our booklet, "Standardized Leather Belting" explaining scientifically the application of standardization to belting.

Grooves cut with Huther Bros. Dado Heads.

**Fits Any
Saw Mandrel**

A Huther Bros. Dado Head
consists of two outside cut-
ters and enough inside cutters
to make the required cut. This
Head will cut perfect grooves,
with or across grain, any width.
It is an easy Head to keep in
perfect condition, has a simple
quick adjustment, and may be
enlarged any time after pur-
chase. Sent on approval and
if not satisfactory return at
our expense.

"Hamilton" Steam Tension Band Mill

(Single or Double Cutting)

SPECIAL FEATURES OF THIS BAND MILL

- 1—Tension on saws maintained by steam—quickest and most sensitive form of tension yet devised.
- 2—Top wheel supported both above and below mandrel.
- 3—Extra large mandrel bearings top and bottom.
- 4—Top wheel has 12-inch range of adjustment.
- 5—Unbreakable upper saw guide raised and lowered by steam—first used on our machine.
- 6—Both top and bottom wheels instantly aligned by screw adjustment.
- 7—Operating mechanism is rapid and power driven.
- 8—Takes saws 12 inches to 14 inches wide.
- 9—Extra heavy, rigid, strong and accurately built throughout.
- 10—Built by expert workmen in a plant that has been manufacturing high grade saw-mill machinery for over sixty years.

A Practical Truck for Lumbermen and Loggers

Because it is dependable and rugged—

Because it is sturdy and strong—

Because it is powerful and economical, the Duplex 4-Wheel drive truck is being adopted universally to transport logs, lumber and building materials.

Throughout the country—in southern and western logging camps—in mountainous timber districts in the east—the Duplex is transporting logs to mills and terminals.

It is opening up many new timber districts to operators because the Duplex offers the only practical means of transportation.

If your haulage conditions are unusual—

If you are now forced to use six horse or mule teams on each wagon—

If your logs must be hauled over steep hills, through mud or sand, let us tell you how the Duplex is operating under similar conditions.

Let us refer you to logging operators and lumber dealers who are using their Duplex trucks 365 days in the year—under the severest weather and road conditions.

We'll gladly send you our booklet, "The Modern and Efficient Way to Haul Lumber," and "Duplex Doings," the heavy hauler's magazine.

DUPLEX TRUCK COMPANY
2062 Washington Ave. Lansing, Mich.

*With tire mileage greater—
And fuel consumption less—
Duplex cost per ton-mile is always lower.*

DUPLEX

**FOUR
WHEEL
DRIVE
TRUCK**

STEAM FEEDS

Our Direct Acting Feeds are built in any desired size

This mark on your saw-mill machinery is an indication that your lumber manufacturing equipment is the best and most economical money can buy.

**We have a 10" x 42 ft. Feed in stock for
IMMEDIATE SHIPMENT**

The above illustration gives a good general idea of our direct acting, or shot gun, steam feed, which we build in the following sizes: 8 in., 10 in., 11 in., 12 in. and 14 in. bore, or in any desired size.

The cylinders are made in 6 ft. sections, and are bored to exact diameter. The flanges on cylinders are faced perfectly true, and finished to templates, so that each section is interchangeable. The flanges are also turned on the outside, which is a great convenience for levelling or lining the feed when placing same in mill.

The front-cylinder head is our improved pattern.

The piston rod is made from double thickness, seamless steel tubing, of extra large diameter.

Our Illustrated Catalogue contains full details. A copy will be sent you on request.

And Here is Why:

Built in 7, 8, 9 and 10 ft. sizes, there's a Waterous Bandmill for every kind of work.

The spring-cushioned, all knife edged tension device is the most sensitive in use.

Upper and lower guides swing about the exact centre of the saw blade.

The Upper Guide is raised and lowered by steam, and easy, accurate and swift adjustment unequalled by any other.

Wheel raising device and tilting device are roller bearing.

Operating mechanism is entirely enclosed in columns. Sawdust and slivers cannot reach it.

Massive design of the bed and columns precludes vibration during cutting. This mill is absolutely steady doing the heaviest work.

Every part of the mill is designed to make millwrighting easy. Adjustments and inspections can be made without difficulty.

Waterous Bandmills are designed and built in a plant that has specialized in the manufacture of Canadian sawmill machinery for more than fifty years. It counts.

The
Waterous Engine Works
Co., Limited

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 85c per lb.; West of Fort William, 88c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

Not altogether what we say, but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

Mr. LUMBER MANUFACTURER

The War is Over

Are You Prepared for Peace ?

I S your equipment capable of taking care of your share of the coming exceptional demand for lumber, both rough and manufactured? If not, **get ready**. Don't be caught unprepared. Take heed of the lessons taught us by the war.

We can help you bring your plant to 100 per cent. efficiency.

Here are a few machines which will fill in some of your weak spots—necessary tools; good buys—all up to the minute.

- 54" American Ball Bearing Resaw, 7" blades.
- 26 x 6 American No. 146 Six Roll, Heavy Duty Double Surfer.
- 30 x 6 Woods No. 58 Six Roll, Heavy Duty Double Surfer.
- Woods No. 107, 12 x 6 Four Side Inside Moulder.
- American No. 77, 15 x 6 Fast Feed Matcher.
- American No. 65, 15 x 6 Fast Feed Matcher.
- American No. 2 Heavy Duty Self Feed Circular Rip Saw.
- Yates 49" Endless Bed Sander.
- Whitney 36" x 7" Single Surfer, with sectional Roll and Chipbreaker.
- Preston Double Spindle Ball Bearing Shaper with Guide Stand Countershaft.
- American 12" Solid Roll Scraping Machine.
- Whitney 15" Solid Roll Scraping Machine.
- C.M.C. (Sherman Type) Single End Matchers.

These are just a few machines selected from our present stock. We have a great many others.

Look them over, pick out those you require and **Buy Now**—You will need them soon.

BRITISH COLUMBIA RED CEDAR SHINGLES

Mr. Retailer

For six months the Shingle Agency of B. C. has been carrying on an energetic advertising campaign, calling the attention of the public in both Eastern and Western Canada to the superiority of British Columbia Red Cedar Shingles.

Our campaign has been even more successful than we hoped. Today our office is being overwhelmed with requests for literature—enquiries as to where the writer could get our trademarked shingles, etc.

We've found that the people want to know about the famous British Columbia Red Cedar Shingles—want to use them—want to know where to get them.

We don't deal direct. We reach the consumer through you. We want your co-operation in turning the demand resulting from our campaign into actual sales.

We're planning a greatly extended campaign for 1919. We want you to co-operate with us.

GET ON OUR BAND WAGON—SHARE IN THE BENEFITS OF OUR CAMPAIGN

If you're handling our trademarked shingles, list your name with our office so we can refer enquiries from your section to you.

If you're not carrying them, write for particulars of our campaign. We'll prove to you that we not only turn out the best roofing product on the market, but also that we're putting our cards right on the table before the public and are winning out.

Ask us for our attractive office display cards—dealers' booklets, etc.—literature that will help your business.

We've broken the ice. Give us your hearty co-operation and we can together put British Columbia Red Cedar Shingles where they ought to be on the Canadian market.

Issued by the Publicity Section.

SAW MILL MACHINERY

Firstbrook Bros.
Limited

Having decided to discontinue saw mill operations at Penetang have the following machinery for sale. This machinery is all in operating condition and is open for inspection at Penetang, Ont.

Mill Machinery

- Extra heavy log haul-up works with inch round and flat chain, 128 ft. centres.
2—Waterous log unloaders or kickers, 3 arms, 10 in. cylinders.
1—Waterous log loader, 8 arms, 10-in. cylinders.
1—Waterous right-hand double cutting band mill, 11 in. saws, 8 ft. wheel, with 3-block carriage; 24 in. opening; Payette set works and dogs; 8 in. x 36 ft. steam feed.
1—Waterous double edger for 20-inch saws, lever shifter.
1—Payette double edger for 18-in. saws, lever shifter.
48—live rolls about 8 ft. long by 10 in. dia.; extra heavy, sprocket drive.
20—High cars with roller tops, 24 in. heavy wheels on 3 in. axles, standard gauge.
1—Mershon 4 saw gang resaw, takes squared cants or just one face, ideal machine to cut small logs and centres of large after good has been taken off.
1—Payette picket machine, made specially for shade roller stock, will feed pieces 18 in. long, also sorting table with chain top.
1—Rogers Iron Works circular resaw for making box lumber from slabs; fool-proof machine.
1—Payette edger for box and short stock.
1—Rogers twin circular or tie maker.
1—Payette lath bolter and lath machine.
1—Pair lath trimmers.
1—Picket trimmer (bunch trim).
Conveyor drives and chains.
Pulleys, gears, heavy line shafting and countershafting with bearings.
Send us your requirements.
We have a large stock of double and triple leather belting in widths from 10 in. to 48 in.

Power House Equipment

- 3—Return Tubular Boilers, Goldie McCulloch make, 66 x 16, Dutch oven settings, 85 lbs. steam allowance Ontario Government.
Breeching and smoke stack for above boilers, 50 in. dia., newly painted, 600 ft. new 1/4-in. guy and plate for brick pier.
1—Northey boiler feed pump, outside packed, 8 in. x 5 in. x 12 in., for 3 in. suction pipe.
1—Pair Polson "Brown" type engines, coupled on quarters, 22 in. x 50 in., with 16 ft. x 48 in. belt, balance wheel. Excellent engines.
1—Pair American feed water heaters for above engines; 10 in., copper coils.

Filing Equipment

- 1—Waterous band saw grinder for 6 in. saws.
1—Baldwin retootheer for band saws.
1—Wm. Hamilton band saw shear, 12".
2—Reversible saw levelling blocks.
2—Chilled band saw anvils.
Hanchet band saw swages; Crescent circular saw swages; shapers and dressers.

Yard Equipment

- Booms and boom chains, 1/2, 3/4 & 1. Winches and other mill supplies.

Prompt shipments and bargains for quick sale. Will send all particulars and prices on application.

Get This Straight

There's a "Rite-Grade" grade of Red Cedar Shingles for every purpose where shingles can be used.

Study the summary of grades listed below. Study your customers' requirements then order accordingly.

Here are the grades:

"Rite-Grade Inspected" Perfects 18"-5/2 1/4

No sap, no defects, 100 per cent. edge grain, a perfect shingle in every respect.

"Rite-Grade Inspected" Perfects 16"-5/2

No sap, no defects, 100 per cent. edge grain; a perfect shingle in every respect.

"Rite-Grade Inspected" Perfects 16"-6/2

No sap, no defects, 100 per cent. edge grain; a perfect shingle in every respect. (For siding purposes).

"Rite-Grade Inspected" Extra Clears 16"-5/2

A wholly serviceable shingle but permitting a very limited amount of defects and flat grain.

"Rite-Grade Inspected" Eureka 18"-5/2

An 18 inch shingle made under Extra Clear specifications.

"Rite-Grade Inspected" Extra Star-A-Stars 16"-6/2

A shingle for semi-permanent construction, permitting of certain defects in a limited quantity.

"Rite-Grade Inspected" Extra Star-A-Stars 16"-5/2

A shingle made under Extra Star-A-Star specifications but under Extra Clear thickness.

"Rite-Grade Inspected" Dimensions

A 100 per cent. clear shingle made in both 5/2 and 6/2 thicknesses and in 4 in. and 5 in. widths.

What this trade mark means.

The Association's "Rite-Grade Inspected" trade mark appears on shingles only when they have been found by Association inspectors to fully comply with specifications of grade under which manufactured. It is a symbol of integrity of manufacture and certification of grade appearing on shingles in addition to mills' private brand.

Write for complete grading and packing rules for "Rite-Grade Inspected" Red Cedar Shingles, and for a list of mills entitled to use the trade mark.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster-General for Canada, for transmission as second-class matter.

Entered as second-class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 38

Toronto, December 15, 1918

No 24

The Outlook for Lumber Industry is Most Encouraging

With the passing of each week the prospects in regard to both the domestic and foreign demand for lumber grow brighter, while the tone of market conditions is becoming firmer. The expression of confidence is heard on all sides and to use a colloquial term, "things look good."

In order to gain first-hand information relating to producing possibilities, the perspective for the coming season and the general trade outlook, the "Canada Lumberman" has secured interviews with a number of representative firms in various parts of the Dominion which are published on another page in this issue. It will be noticed that there is remarkable unanimity on several points, among them being that lumber cannot come down in price, that woods operations are considerably higher than last year and that any release in labor has come too late to alter materially the situation in regard to next year's output. Some firms intimate that there is more evidence of an advance than there is any probability of a decrease. There may not be any sudden boom or over-night change of conditions to abnormal prosperity, but judging from the way various contributing factors are shaping up, there is every indication that 1919 will be a banner year in the lumber manufacturing business. The industry, as a whole, is unanimous that the Government should take every step possible to encourage building and other works of reconstruction and facilitate exports. The necessary labor will be available by reason of the demobilization of troops and while it is not desirable that the Federal authorities should inaugurate indiscriminate expenditure in order to use materials and provide employment, there is much in the way of public works and uncompleted contracts that can be carried out to the advantage of the different communities and the strengthening and establishing of industrial conditions.

There is a general feeling in the trade that Canadian lumbermen should be represented overseas at the present moment the same

as other industries are. The difficulty, however, is to obtain men of weight and influence who will be appointed by reason of their knowledge, skill and wide experience, and not on the basis of political pull or party service. Foreign representatives should be paid liberal salaries in fact, the highest figure that they could command in any sphere of activity. Their special business would be to get in touch with purchasing commissions, government bureaus and large importers who are responsible for reconstruction work, and be able to interpret in Canadian terms trade requirements so far as sizes, grades and stocks are concerned, in order that the Dominion may reap the full benefit of her lumber resources.

So far as manufacturers generally can discern there is nothing to warrant prices falling in the near future. Possibly one of the strongest statements uttered is that of the Ontario concern which succinctly sums up the situation by stating that the immediate domestic demand for lumber coupled with the great possibilities overseas will keep Canadian manufacturers busy taking care of their requirements, as the prospects in the woods this winter are not encouraging in the way of getting out fair sized quantities of logs. Labor is still scarce in many sections, wages high, and supplies more costly than ever, so that from the viewpoint of the producer, he would not be justified in logging at all if quotations for the finished product are not going to hold where they are, or advance on some lines. The opinion is expressed that demand and supply have already demonstrated that the present figures for all kinds of lumber will prevail, and that the most satisfactory year in forest products which the Canadian timber trade has experienced during the past decade is approaching.

Meeting the Housing and Industrial Situation Effectively

Housing and industrial problems are coming to the front more than ever now that the process of restoring things to a normal order is well under way. All serious efforts should be regarded with a certain amount of respect, but in the multitude of schemes brought forward, there is some doubt as to whether any real progress can be made in respect to the erection of dwellings on a general basic plan. The peculiar conditions and special needs of each community must be considered locally as the class of dwellings that may suit one town will possibly not meet the requirements of another. Just as municipalities differ in educational, social and religious facilities, there always be a wide divergence of what constitutes the ideal home for the working man, how many rooms it should contain, the material that should be used in its construction, the cost, the method of payment, the probable return on the money, how far the municipality or employers should go in satisfying the crying need for more dwellings, etc.

It is said that at the next session of the Ontario Legislature some progressive measures will be introduced, as money will be loaned town and cities on more favorable conditions than was at first proposed. The Ontario Legislature some time ago decided to advance \$2,000,000 to the municipalities to encourage home building, but since then the Dominion Government has agreed to loan the provinces of Canada \$25,000,000 with the object of assisting in the work of providing better housing conditions for the industrial population in the large centres. It is anticipated that Ontario's proportion will be sufficient to meet the requirements of all municipalities in connection with the housing proposition. \$8,600,000 will probably be Ontario's share and of this possibly one-third will be spent on lumber or about \$2,500,000. It is probable that the average cost of a house will be \$2,500 and that the rate of interest charged will be 5 per cent. A leading official has pointed out that it may be very well to erect arches and platforms and strew bunting and flags in honor of the returned soldiers, but the greatest service that can be rendered the war veterans is to see that they are provided with comfortable homes, that can be rented at a reasonable figure or bought on easy terms of payment, and given steady congenial employment. The municipality that first solves and solves satisfactorily the housing problem so that its industrial army of workers live in surroundings that are restful and pleasant, instead of gnawing and irritating will be the one that will thrive during the days of peace and go on to greater and better things by

reason of the happiness, contentment and public spirit engendered in the community.

Some instructive features on Canada's obligations and responsibilities were recently given before the Canadian Men's Credit Association, by Sir John Willison.

He said that between 1,200,000 and 1,500,000 people out of a population of eight millions will be vitally affected by the cessation of hostilities. Instead of \$336,000,000, the public debt of the country is now between \$1,200,000,000 and \$1,500,000,000. The greatest yearly revenue before the war was \$173,000,000, whereas for the future there will have to be raised between \$300,000,000 and \$350,000,000. If the railways are taken over within the next eight or ten years, between \$300,000,000 and \$400,000,000 will have to be raised, instead of the former \$173,000,000. In 1914 the total value of exports of Canadian manufactures was \$57,000,000, whereas the increase during the war was over 1,000 per cent. "If the country can be carried through the next six months it is my conviction that we will enter on a long period of prosperity," declared the speaker. "Precedents may have to be discarded for the moment. The time demands initiative, courage and energy and the co-operation of all interests to insure satisfactory peace conditions."

While a great responsibility rested on the Federal Government, Sir John believed it would prove equal to it. If the exports of Canada can be maintained at between \$400,000,000 and \$500,000,000 a natural development can be established between the industries and agriculture. There have been satisfactory conditions in Canada during the war because the industries have been active and prosperous. If that had not been the condition there would have been industrial stagnation and unsatisfactory agricultural conditions.

Protecting Lumber Stocks to the Limit of Their Value

While "Fire Observance Day" was from every standpoint well observed in the province of Ontario, it should point to higher things and wider efforts than the mere elimination of the causes of the conflagrations that come so frequently to sawmills, woodworking plants, and retail lumber yards. Considering the exalted values of lumber to-day how many retail lumbermen carry insurance at all commensurate with the money invested in their stocks? The great trouble in this life is most of us are apt to imagine that we are immune from any disaster, plague or accident if we take reasonable and proper physical precautions. True, these all help, but no one person is entirely free from the afflictions and dangers which visit those around us. The minute an individual gets the idea that, while this and that may come to others, he will, by some miracle or his usual good luck or foresight, escape, he is wandering in a fool's paradise. Such a human being is on a par with the conceited, egotistical chap who imagines that he is indispensable to an institution, that the boss cannot get along without the aid of his ability and knowledge, and that if he suddenly departed from his particular sphere of activity, the business structure with which he is identified, would soon go on the financial rocks.

It is a menace to a man's progress when thoughts surge through his brain that he is very unlike other individuals or immeasurably cleverer than they are; that he can discern danger afar off and round the corner in time of peril or seek shelter before the oncoming storm. When many in every community are contracting disease and suffering losses through fires, burglaries, over-buying, loose credits, inefficient management or other things which wreck physical and material structures, it is idle for certain bipeds, sometimes masquerading as men, to walk across the stage of action and, by their bearing and attitude proclaim, "Oh well, what can you expect from such a man," "He might know that it was coming," "I could see it heading his way long ago, but with me it is different," etc.

All of which leads up again to the subject of fire insurance. Like lightning, fires strike often where least expected. It is generally recognized that the small retail lumber yards are not carrying sufficient insurance on their stocks of lumber. Co-operation can be applied to

insurance as well as to every other well-directed line of business. By co-operation wasteful competition and a feeling of distrust are eliminated. But it has always been difficult to convince the average insurer that, in order to reduce the cost of insurance, there should be greater co-operation between the companies and the insured. The figures which have been presented from time to time of the amount of loss in Canada from fires are literally staggering, and need not be repeated here. The conditions which contribute to this unhappy state of affairs must be improved and there can be no reduction in the cost of insurance until matters are radically remedied. It must be remembered that the insurance companies do not pay the loss but collect a tax from the insured in the way of premiums and distribute it among those who have suffered losses. If the insured would or could prevent their losses automatically, the cost they are paying for protection would be proportionately much less.

Just as credit is the basis of business; so insurance is the backbone of credit, and this involves an obligation on everyone who makes use of credit. Speaking along this line before a recent gathering of lumbermen, a leading authority on insurance stated that if the manufacturer neglected his credit insurance the bank might suffer. If he was supposed to be carrying insurance to protect the wholesaler, the latter, in the event of a fire, might suffer owing to there not being sufficient insurance to go around. If the wholesaler suffered the bank might also be a loser, as the result of the former not being able to fulfil his financial obligations. Coming down again to the case of the retailer it was pointed out that there was a special obligation that retail lumber dealers should carry sufficient insurance to protect the wholesaler from whom their lumber was purchased. In some cases it might happen that their insurance was hypothecated to the bank as collateral security for certain advances which the bank had made to the retailer, but, in any event, there should be sufficient insurance protection to meet all the retailer's obligations.

There is a feature about most of the policies upon lumber which should be borne in mind. It requires the insurer to carry insurance up to the full value of the stock or to become a co-insurer. This, it was emphasized, is especially essential for the protection of the wholesaler. Of late years mercantile agencies have incorporated in their reports the amount of insurance carried and the number of fires a man has sustained, when it is possible for them to obtain this information. It is only by united, aggressive and co-operative effort that insurance rates, high as they are to-day, will ever be decreased. By education, care, study and proper safeguards the amazing losses may be reduced, but not until then will the tariffs come down. As to the various forms of insurance, they all have their respective merits, but probably the most satisfactory so far as lumbering activities are concerned are the mutual concerns, where all the profits of operation revert to the subscribers.

Forest Products Commanding Widest Attention Ever Known

The future of lumber is receiving wider attention to-day than ever before. In the reconstruction of Europe there will probably be more frame houses built within the next two years than there would be in a decade under normal conditions. It is too early yet to make any definite prediction, but as the days pass and new evidence accumulates on all sides, those who give close study to the situation believe that the lumber industry is on the eve of one of the greatest eras of expansion that has ever been experienced. The period of unusual commercial demand is likely to extend over a number of years rather than be of short duration. Every European nation will be calling for structural material to rebuild France and Belgium. This is not taking into consideration the consumption of lumber in the United Kingdom. One journal says, in referring to these countries and others, that billions of additional feet will be required to take care of European reconstruction—more than all the sawmills in all the world will be able to produce for years to come. While this is doubtless a trade hyperbole, it sounds well at any rate and is probably uttered in an after-the-war enthusiasm. As an index, however, of the revival of the

times there has been arranged for in New York City more than \$200,000,000 worth of building construction. Other places are following suit, Toronto among them. Woodworking plants in allied industries will be kept on the move and everything betokens a return to prosperity that will be substantial and universal, while it is believed that present prices on all lines of lumber will be maintained for, at least, another year. In fact, some lumbermen are predicting that on those woods used principally in house building—white pine and hemlock—there will be an increase of ten per cent. before spring. Even should this not take place there is apparently nothing to warrant values decreasing, not until there is some readjustment of wages, or the cost of living and other supplies has descended a great deal in the scale.

More Regulations Necessary to Prevent Fire Waste

There are three engrossing problems which business associations manufacturers organizations and contractors and others are dealing with particularly at the present time. The readjustment and reconstruction issues, housing plans and the loss by fire waste. In spite of the agitation for better regulations and the broad campaign of education that has been carried on there does not seem to be any perceptible decrease in the number of conflagrations. The Canadian Commission of Conservation recently issued a highly significant statement pointing out that the annual fire loss in Canada is a staggering one and that from 70 to 80 per cent. is due to fires in manufacturing plants and business establishments. During the first ten months of the present year there was an increase over the corresponding period of 1917 in spite of propaganda conducted under various auspices.

Pure downright carelessness thoughtlessness, selfishness negligence, the take-a-chance attitude and the don't-care spirit, seem to be largely contributory to a state of affairs which, in the last fifty years, has destroyed property in Canada to the value of \$450,000,000, while the cost of insurance has been approximately \$780,000,000. The waste is not decreasing as in 1914 the total fire loss in Canada was \$22,000,000; in 1915, \$25,000,000; 1916, \$24,000,000 and for the first ten months of the present year, \$28,750,000. Another outstanding feature is that 65 per cent. of the total fire waste occurred in five per cent. of the fires.

There must be greater co-ordination and co-operation on the part of Dominion, Provincial and Municipal authorities to bring about a better state of affairs and less of the spirit of shifting responsibilities from one Government to another.

Concerted action is imperative. It has been urged that building codes be standardized and various other progressive means taken to combat the greatest destructive agency on earth next to war itself. A stinging rebuke is handed out by the Commission of Conservation which should arouse some of the selfish and indifferent to action. It charges that through the negligence of owners and occupants of houses, the eight million people of Canada are being burdened with a loss of over \$28,000,000 in ten months and stand indicted before the rest of the world as a nation of careless spendthrifts. While seventy to eighty per cent. of Canada's annual fire loss is due to fires in manufacturing plants and business establishments as already pointed out, the time, thought and energy spent upon teaching fire prevention in public schools comes dangerously near being misdirected. Any education to be effective must be directed towards the real offenders

—the owners and occupants of property whose revenues are augmented by neglect of the principle of fire protection, and who, through the insurance channel silently capitalize their evasion.

A Business Courtesy That is Too Frequently Neglected

"Why don't you answer your letters?" asks an Eastern exchange of several of its readers to whom certain enquiries were sent recently; and only about fifteen per cent. of replies received. This induces the publication to come out straight from the shoulder and remark rather vigorously. "If someone asked you a perfectly proper and polite question and your hearing was good, yet you wilfully ignored or disdained the query, such an act would be interpreted as highly discourteous and inconsiderate, not to say rude or boorish." The editor points out that this is what happens in his ordinary business correspondence, and many general managers, vice-presidents, superintendents and others who would not think for one minute of ignoring any timely question, will, unless communications savour directly in the nature of an order, neglect attending to the same. To answer all letters promptly and politely does not require a great deal of time, and

particularly with the modern facilities which a manufacturer or merchant has at his disposal in the way of stenographers; dictaphones, typewriters, etc., yet such communications are overlooked, cast aside or completely forgotten through lack of prompt and systematic attention.

The subject of letter writing has been treated from every angle, and one can scarcely pick up a magazine wherein there is not offered special correspondence courses on how to get results from business enquiries the development of selling propositions by mail, the methods of securing new customers, etc. If some particular school will evolve a syllabus that will result in the ordinary business from answering trade and general information enquiries within a reasonable time and in an open and fair minded spirit where such mail matter does not partake of the nature of a new customer or of an order, yet is, at the same time, a perfectly

legitimate request for instructive purposes, such an institution will have conferred upon the industrial and mercantile community a blessing and a boon which should almost entitle it to state endowment, concludes the writer. He adds, "we want your ideas on doing business, cost accounting, deliveries, the help problem, modern methods, stock keeping system, service, turnover, time and labor-saving devices, expansion and changes in your firm, etc., yet in answer to perfectly proper enquiries along this line in order to make our medium more useful, helpful and practical to the trade, we receive only a small measure of encouragement and co-operation."

The journal in question caters to another line of trade than that of lumbering, but the foregoing remarks regarding the neglect or indifference in the matter of answering queries applies with more or less pointedness to every line of industry.

The wooden steamship War Selkirk has arrived in London, being the first of the wooden ships built on the Pacific Coast for the Imperial Munitions Board to complete her transatlantic voyage. The War Selkirk carried a cargo of lumber and other supplies for the British Government.

How Canadian Lumbermen View Conditions

Many Practical Suggestions Presented on Stabilizing the Industry and Developing Domestic and Foreign Trade—Outlook on Production and Prices

Attention is now being directed as never before to the foreign and domestic business in the Canadian lumber industry. While the future cannot be foretold still the views of leading firms are always interesting, in that, so far as is humanly possible, they have gauged the situation and there is not on the horizon a menacing cloud. Lumber associations and executives of representative companies are doing more thinking at the present juncture along the lines of standardizing, stabilizing and expanding the industry than they have at any period during the past few years.

In order to present first hand information the "Canada Lumberman" has secured interviews with influential lumber organizations in many parts of the Dominion on a number of important points such as:

What steps, if any, should be taken by the Government to encourage building and other works of construction?

Should our lumber be manufactured into the more finished product to a greater extent than in the past? If so, how can this be brought about?

What would be the best methods of developing the export trade, having particularly in mind the vast quantity of timber that will be required for reconstruction in Europe?

What conditions prevail in the woods this season in respect to size of output as compared with last year, wages, labor, cost of supplies, etc?

Do you anticipate any material change in the price of lumber in the near future? If so what influence will bring it about?

The answers to the foregoing are in many cases condensed owing to the amount of ground the subject covers, but it will be noticed that a hopeful view and confident spirit prevails and the outlook for the Canadian lumber industry extending its operations abroad and building up a strong and increasing European trade are very bright. It is also felt that with the building boom which is about to set in early in the year, there will be a decided movement of stocks which are, on the whole, below normal.

Opinion prevails that values will be well maintained, owing to the high cost of getting out the timber. The release of labor for the woods did not come in time to affect materially wages this season, while all camp supplies and equipment were purchased on the basis of the war going on until spring at any rate. These and other factors, along with the limited supply on hand, the curtailed number of camps, the decreased cut of last season, etc., will, in the mind of most firms, prove a vital factor in strengthening values and keeping up the tone of the market.

How Producing Costs Have Ascended

The Davison Lumber and Manufacturing Co., Bridgewater, N. S., say that in their opinion "the federal government should foster building and other works of construction and encourage expansion, so that the raw materials of Canada can be manufactured into a finished state. This can best be done by the government assisting and encouraging capital to invest when the building time starts." Continuing, the firm add: "Lumber should be manufactured into a more finished product by all means, and modern, efficient plants built so that all raw material can be converted into a finished state. The best methods of catering to the expert trade are to meet the buyers' requirements and this can be done by a close study of the situation. With respect to woods conditions men are scarcer and labor conditions worse than in 1917-1918, while provisions are higher, and consequently the crop of logs cut this winter will be lighter and at a higher cost. Our opinion is that the cut will fall thirty per cent. under that of a year ago. The price of lumber must be advanced as the demand for it will be greater, production will be considerably under requirements, and labor costs and provisions at least thirty per cent. over last year. For instance, oats are advanced thirty per cent., hay about fifty per cent., while nearly every line of provisions that the lumbermen use in quantities are up anywhere from ten to twenty per cent."

Lumber Values Must Be Maintained

The Northern Ontario Colonization Co., whose lumber mills are at Jacksonboro, Ont., remark with reference to the domestic and export trade "that Hon. G. Howard Ferguson, Minister of Lands, Forests and Mines, recognizes the necessity of getting in touch with

the export trade, as he recently sent out a letter to the lumbermen, suggesting that they lose no time in getting in touch with the requirements of the European trade on reconstruction and giving the lumber industry to understand that his department would be more than glad to co-operate in every possible way.

"Both the government and the industry are mightily interested in developing domestic demand and getting in touch with the requirements of the export trade. So little has been during the past three or four years throughout Canada in the way of ordinary building that surely during the next two or three years the activity along the building line should be very extensive.

"As to the demand of the foreign trade, don't see how the Government or the industry can get very much of a line on it until they have gotten onto the ground and investigated. This part of the programme should be launched soon. It is fair to assume that the export trade will require considerable finished product; that is, finished lumber rather than lumber in the rough.

It strikes us that the immediate domestic demand for lumber, coupled with the possibilities overseas, will keep the Canadian manufacturers busy taking care of the requirements, as the prospects in the woods for this winter are not very encouraging in the way of getting out good, fair sized stocks of logs, labor being very scarce and wages high, so that from the viewpoint of the manufacturer he would not be justified in logging at all if prices of lumber were not going to hold where they are; in fact, we consider the supply and demand has already demonstrated that present prices will hold and there are certain forest products gotten out of the bush that will advance. We refer to ties, poles, posts and pulpwood. We find the situation in the States very similar to that throughout Canada."

United Action and Co-operation Needed

The Bathurst Lumber Co., of Bathurst, N.B., observe: "We agree with you that the present is a serious time, and a time that requires the united action and co-operation of the entire lumber trade, if we are going to solve successfully the many problems that will be brought before us. Our opinion is that the lumber trade requires the co-operation of the entire lumber industry from the Atlantic to the Pacific. We are glad to be able to say that we think a movement has been started in this direction that will result in great good for the trade. At the meeting of the Canadian Lumbermen's Association in Montreal a very large addition was made to the membership. There is certainly a feeling now that the different manufacturing lumber industries should be grouped in local associations, all of which would affiliate with the Canadian Lumbermen's Association, and that there would be, as far as possible, co-operation in the lumber trade over the whole of Canada. If this can be brought about, we look for great results and believe that the lumber trade of Canada can be stabilized and strengthened by co-operation in this way that will redound to the benefit of all concerned.

"As to the question of what encouragement the Government should give to building and other construction works, we think that this is a very difficult subject to handle by the Government, and it is one that they will have to work out themselves.

"There is no doubt at all but what the lumber of our country should be worked up here into as nearly as possible the finished article required to go in at the point of delivery, and in order to do this, it will be necessary for a greater number of the lumber manufacturing industries of the country to have dressing and resaw mills in connection with their regular saw mill operation.

"Regarding the best methods of developing export trade, would say that what we think is required to-day to stimulate the export trade is the providing of tonnage to move the lumber to the different markets of the world, and to remove all restrictions as to trade, particularly the restrictions that prevail in Great Britain at the present time preventing free trade as existed before the war.

"With respect to the conditions in the woods this year, they could not be worse. Wages and all supplies are higher, and in addition, the terrible ravages caused by the influenza have completely demoralized and upset the woods works to such an extent that there is not over 25 per cent. of the logs usually cut at this time of year, and we do not see how we can recover no matter how favorable the conditions may be from this time out. Eastern Quebec and Northern

New Brunswick certainly will not have over 50 per cent. lumber cut next year if they can attain that.

"With reference to the question of any material change in the price of lumber, would say that if the restrictions regarding the export trade are removed, we think that lumber will hold its own or still further advance. The cost of logging is materially higher than a year ago, and also all supplies up to the present are much higher, so that we figure the logs going into the lumber product next year are going to average several dollars higher than last year."

Heavy Percentages of Increased Cost

The Keewatin Lumber Co. of Keewatin, Ont., in reviewing matters generally, remark: "Woods work with us will be about 50 per cent. of normal this year, labor costing 20 per cent. more than last year, supplies for men about 20 per cent. more, supplies for horses about 30 per cent. more. So far this year we have only been able to secure about half as many men as we did last year. Reports from the camp would indicate that the efficiency of the men is from 20 per cent. to 30 per cent. less than last year. It looks now as though we would not get over 50 per cent. of a normal crop of logs, and that they will cost us from 20 to 30 per cent. more than last year, which will mean about 100 to 115 per cent. more than the season of 1913-14, which we figure was our last normal year. So far as we can learn the operations of our neighbors is being conducted on about the same basis as our own. This being the case, we cannot see how any reduction in lumber prices can be expected. It would almost seem that lumber prices should be advanced."

The Lumber Supply Will be Limited

The Little Current Lumber Co. of Bay City, Mich., who operate mills at Little Current, Ont., say that: "What lumber we will manufacture during the season of 1919 will undoubtedly be shipped to the United States. On account of so much unfavorable weather from the time the logging season started up to the present time, and also sickness and scarcity of labor, it does not look to us that there will be over half as many logs put in in the northern end of Georgian Bay as there was during the logging season of 1917-18, and while building will not be resumed on anything approaching normal lines, the supply of lumber will be so short that the chances are the prices will not be any lower on lumber than they are at present. It looks to us that during the season of 1919 the present prices will probably be maintained."

The Cut Will Be Materially Reduced

"The Shepard & Morse Lumber Co. (Canada) Ottawa, write: "From information gathered we believe that the production of lumber next season will be very much curtailed, owing to the great scarcity of labor in the woods this winter. In talking with the various manufacturers, there appears to be no one taking out a normal cut; in fact, most of them would be from 25 per cent. to 50 per cent. short of the usual production."

"With reference to the manufacture of lumber, will say that the manufacturers, we think, should sell the product in the rough. There is not the slightest doubt but that large quantities will be required in both France and Belgium for reconstruction, and we believe that Canada and the United States will furnish large quantities. As you know, Russia is so disorganized now, nothing can be expected to come from there in the way of lumber for some time to come. Our only other competitors would be Norway and Sweden."

"Regarding the price of lumber for next season, it is our belief that owing to the high cost of production, we may look for an advance of \$7.00 to \$10.00 per M. ft., otherwise it would be folly for the manufacturers to start sawing next Spring."

How Western Trade Can Be Encouraged

The Small & Bucklin Lumber Co. of New Westminster, B.C., declare: "One thing it seems that the Government should do to assist British Columbia and it would be to establish and maintain a line of steamships to carry the export trade both to Australia and to the Old Country. As we understand it, at the present time the San Francisco shipping interests have practically all the tonnage corralled, and for this reason the Washington and Oregon mills are able to handle practically all of the Australian trade, which as we all know, is quite a volume and quite an attractive item if we could only get tonnage to take it."

"As for local conditions in the building line—this is a matter which local conditions only can adjust, and we do not see how the Government could assist permanently along this line."

"If the Government railways could place their orders for lumber during times of depression they would be able to purchase much cheaper, and it would be far better for the mills, but railway companies in the past, like all others, have held off just when the mills needed orders, so if they could anticipate their wants and place their orders when the lumber business is slow it would help considerably."

"Regarding material change in the price of lumber in the near

future, the present prices are inflated, caused by the high wages prevailing at the present time, owing to the scarcity of labor. We expect as soon as the soldiers are returned to peace work there will be a considerable amount of labor available and the wages will consequently be lower. This will reduce log cost to the mills and also labor of operating the mill, hence we anticipate lower prices for our product."

"If wages stay as they are at present both for logger and sawmill, there can be no drop in price of lumber, but at the present time there will be no demand for lumber at the present prices, which most people have the idea is above normal, hence building is practically at a standstill, especially locally."

"The best way to aid the lumber mills that we can think of at the present time is for the Government to obtain tonnage or space, and assist the British Columbia mills in all ways possible to reach the Australian market, which is at present being supplied by Washington and Oregon mills. We presume that the European market will be supplied by the Baltic, as in the past, owing to low freight cost and cheap labor."

Market Will Absorb All Available Stocks

The Colonial Lumber Co. of Pembroke, Ont. observe: "We are of the opinion that the Canadian lumber industry will be governed during the next year, or during the period of readjustment, largely by supply and demand, the same as in the past. Of course, under present conditions and the prevailing high prices, the question of financing must have a very considerable effect and it is a question as to how financial arrangements will be made to carry out the work of rebuilding the devastated countries of Europe. If satisfactory financial relations are effected for this purpose, we believe the demand is great enough to maintain prices on approximately the present level. We must recognize the fact that the present high prices of lumber are due to war conditions, and that the governments concerned have had to buy lumber and other materials regardless of price. If values are going to remain at the present level, a demand must be substituted, the buying power of which will be equal to the buying power of the last few years under war conditions. We believe the demand for lumber is as great to-day as at any time during the war, possibly greater, but whether arrangements will be made by governments and the big financial institution of the world to rehabilitate the devastated areas, as well as take care of necessary repairs and renewals on this Continent, under present price conditions, we do not know. If Scandinavian lumber is excluded, it will doubtless have considerable effect on prices."

"From all available information, it would seem that world stocks of lumber on hand at the present time are not abnormal, and far from it, even under the conditions of trade and commerce that existed prior to the war. This being the case, we think it may be assumed that the market could easily absorb all the lumber now held in stock, provided, as before stated, financial arrangements are made to carry on. The question is certainly a complex one, but we believe supply and demand will be the governing factors, and that financial institutions should have no greater difficulties to face in the future, than in the past. We think that the ability and ingenuity which has been the guiding power in matters of finance in the past will rise superior to any obstacles that may be confronted in the future. It must not be forgotten that financial objectives have been reached and surpassed, that, previous to the war were believed to be far and beyond the reach of government, municipality or individual. The war has opened the door to financial programmes hitherto undreamed of and entirely beyond the imagination of financiers of the highest reputation."

"Conditions in the woods point to about one-half a crop of logs this winter in this part of the country, so that the production of lumber next season will be seriously curtailed. This should, at least, have a stabilizing influence on the market, and help to hold up prices."

Individual Initiative Should be Released

Clarke Bros. of Bear River, N.S., write that "as to conditions that may prevail in the adjustment period which Canadian lumbermen are facing, we think one man's guess as good as another's. We are in entire accord with you as to the necessity of having united action, but this has never heretofore been possible in Canada."

"You ask what steps, if any, should be taken by the Government to encourage building and other works of construction? Our view is, that if the Government would strike the trammels off trade releasing individual initiative, they would have taken a long step towards bringing the business of this country back to normal. The attitude of the Government for the past four years, has resulted whether intended or otherwise, in bringing about in Canada much the same conditions as those for which our soldiers have been fighting against in Germany."

"All authorities of constitutional government have been violated and we have been governed by order-in-council, promulgated in a

large measure by those having little, or any, except theoretical knowledge, with the result that more than half the Orders-in-Council have been invalid, simply because, they were opposed to reason or common sense. You cannot make water run up hill.

"Regarding whether we should add more finish to our products before shipment, this can be readily answered in the affirmative, if the demand for the finished product was sufficient to justify the installation of a finishing plant, but the real answer to this question is in the lap of the future.

"As to the best method for development of export trade, our view is, that a live business man in those centres where the demand is likely to be the greatest would be of advantage, but the class of men usually pitchforked into these positions, on account of some political service they may render to the party appointing them, leaves much to be desired in the character of the men who now fill such positions.

"Conditions in the wood: Under this heading we may say the output in Nova Scotia will likely be less than fifty per cent. of normal, due to the almost impossibility of securing any kind of labor, beside the fact that the labor secured is not more than fifty per cent. efficient.

"Wages have advanced about one hundred per cent., and this is also true with the cost of supplies, with the result the greater part of lumber products in Nova Scotia this year will cost at least \$20.00 per thousand delivered at the shipping point, to which must be added stumpage value.

"There are immense quantities of manufactured lumber in New Brunswick and in certain parts of Nova Scotia, which will seek the first opportunity to be moved. This fact alone would restrict the output this year, even, if supplies and labor were normal. We anticipate possibly during the next six and a half months more or less hesitation on the part of buyers, until more certainty exists as to what the future may develop in the way of demand.

"Our suggestion would be to strike the legislation shackles off trade, release individual initiative, appoint a live business man in those centres where reconstruction is a necessity and acquaint our people with what will be required, giving particular attention to providing transportation facilities. Let these be prompt and adequate and the lumber trade will take care of itself."

Comprehensive Summary of Situation

The Canadian General Lumber Co., Toronto, in regard to government encouragement of domestic and foreign trade in forest products, offer this opinion:

"In view of the enforced restrictions of civilian effort on account of past war conditions, it is most desirable for the Government to take an active part in stabilizing conditions during the period of readjustment from war to peace conditions.

(a) By the cancellation of war contracts and release of soldiers and workers in an orderly fashion, spread over a reasonable period.

(b) By inaugurating comprehensive schemes of soldier re-establishment.

(c) By co-operating with civilian effort in necessary house building, particularly in large cities, to meet the necessitous demand.

(d) By the revival of all public works, development and extensions, such as Toronto Harbor improvement, Welland Canal, good roads, etc. All of these to be on a basis of sound constructive purposes and not as simply a measure of paternalistic employment.

"With respect to re-manufacturing and finishing of lumber. It is, of course, most desirable to extend and increase all our manufacturing that is possible, but the activity can not be arbitrarily invoked and can not be inspired except through the gradual extension of civilian effort and business expansion.

Regarding developing export trade: This is too large a subject to discuss conclusively in a short outline. Credit and tonnage are the two essentials. Outside of this the customary trade channels are laid in pre-war experience for meeting a well-voiced statement of what is wanted in Europe. All that we require is the opportunity to trade free of restrictions and if the Government will join in efforts to arrange tonnage capacity and credits, civilian commercial instinct and ability will do the rest.

"In reference to general lumbering conditions: The output will undoubtedly be smaller than last year, and very much smaller than normal. Costs will be fully equal and probably in excess of last year.

"Regarding price changes we anticipate no immediate changes of a decided nature. For the next year or two at least we will probably have a tendency towards advancing prices until the supply will have caught up with the demand and future costs of production will have lowered."

Every Firm Should Play Its Part

Austin & Nicholson of Chapleau, Ont., state: "There can be

no question but that the future of Canada, apart altogether from the question of the lumber trade, demands, that every man apply himself as best he may to the development of plans that will assist in stabilizing the country's industry.

"With particular reference to your suggestions: First, what steps should be taken by the Government to encourage building and other works of construction? All legitimate public work actually required in the development of the country should be undertaken by the Governments—Municipal, Provincial and Dominion, just as rapidly as plans can be properly developed, and the necessary labor secured from the demobilization of the troops and the class of industry specially built up around our war effort. This does not mean that any governing body should develop any indiscriminate system of government works solely to provide employment and use material. Very great care must be taken to avoid a repetition of many of the things that almost brought us to the verge of ruin in what might be called the "boom" days prior to the outbreak of war.

"Second: Should our lumber be manufactured into the more finished product, etc. In so far as it is possible. There can be no question as to its desirability. Every additional hour's work that is put on to any product means that much increase in its value, and if we can, by the further manufacture of our lumber products, increase the value of the whole by 50 or 75 per cent. we have increased the wealth of the country by just that amount. As to the means of bringing about that end: Co-operation between the manufacturers of lumber and the manufacturers of all classes of goods into which wood products enter is what is required, together with reasonable encouragement from the Government.

Third: What would be the best method of developing our export trade, etc. Our opinion is that the lumbermen of Canada should be represented overseas at the present moment just the same as the grain growers of Western Canada are represented on what is termed the preliminary Peace Conference, but which in reality is a trade commission seeking to develop sources into which the volume of Canada's agricultural products may be turned. A similar commission of experts representing the lumber trade who would get into touch with those who would be responsible for the reconstruction work in France and Belgium should have a most advantageous effect on the whole lumber industry.

"Finally, in regard to the conditions prevailing in the woods this season. Up to the present we would say that they have been the most difficult that have ever confronted the lumbermen in this country. The cost of everything that goes into the lumber woods is greater than even the high prices of 1917 and the labor situation has been more acute, wages higher and the class of labor less reliable. There has been some ease up in the labor situation since the end of the war, but not what the general public might anticipate. The class of men that is being released by the end of the war is not the class suitable for woods operations. They, of course, are assisting to some degree, but from our viewpoint the 1918-19 woods operations will, on the whole, be the most expensive of any that have yet been incurred in the lumber trade in Canada."

Prompt Action Needed Regarding Export

James Davidson's Sons, of Ottawa, observe: "We understand it is not the intention of the Canadian Government to present any claim for a cash recompense for any part of war expenditures nor ask for any territorial compensation.

"In view of the fact that a large part of the materials necessary for the reconstruction of Belgium and France must necessarily be provided from outside of those countries, we think Canada should receive a good share of the orders for such materials. We believe the Government should seek to have a reasonable proportion of the war indemnity expended in Canada. We now have the Webb law which permits compensations for export trade and that is very important, but a law merely permits; it makes no sales and to do this, will require strenuous effort of our manufacturers. We should be keenly interested in this and be moving vigorously to form Associations and connections that our goods may get adequate representation with foreign buyers. This business necessarily will have to be done on a large scale and we feel that prompt action is necessary on the part of the Canadian Government or our cousins to the South of us, the United States manufacturers, will be given an opportunity through their Government to secure a proportion of our share of this business as well as their own. If the Government would form a Board similar to the Munitions Board to look after this business, and the manufacturers would form their associations for supplying, we believe that better results would be accomplished than to have the different manufacturers undertaking to secure the trade individually. We all know that in unity there is strength."

The Redistribution of Crown Timber Lands?

What the Lumbermen's Protective Association of New Brunswick Desires—The Proposed Basis of Division—Live Issue in Provincial Affairs

By "A New Brunswick Lumberman"

There is no question of greater moment in the Province of New Brunswick to-day than that of the administration of the Crown Timber Lands of the Province. The question is not alone important to lumbermen, but it is of paramount interest to every citizen of the Province inasmuch as the provincial treasury receives its greatest source of revenue from the stumpage collections paid annually by the lessees of the Crown Lands. In fact the territorial revenue with the Dominion subsidy affords the chief sources of revenue which the Province of New Brunswick enjoys.

There are two rival lumbermen's associations in the Province. The aims and achievements of the New Brunswick Lumbermen's Association have already been outlined in these columns. Its contemporary is The Lumbermen's Protective Association, which had its inception prior to the formation of its rival. On the question of the necessity or non necessity of a redistribution of the Crown Timber Lands of New Brunswick, which is the chief issue between the two associations, widely divergent views are held. That the issue will become a big factor on the floor of the Legislative Assembly at Fredericton during the approaching session is assured, while if not definitely settled there, it is not improbable that the people of New Brunswick will be called upon at a general election to determine the policy which would be the more equitable and the more feasible as between the opposing parties and, simultaneously, in the best interests of the Province.

Chief Tangible Asset of Province

To fully appreciate the question it is necessary to review in brief measure the history of the matter so far as Governments of the Province are concerned, for it is an open secret that the matter of the administration of the Crown Timber Lands, the chief tangible asset of the Province, has for a long time occupied an important part in the political history of the Province. In 1893 the Government of New Brunswick granted leases of the Province's timber lands to several influential operators for no less a period than twenty-five years. It is the contention at the outset on the part of The Lumbermen's Protective Association that this legislation operated to create a monopoly of the Crown Timber Lands in favor of the lessees who secured such lengthy leases. New concerns promoted subsequently to 1893, were confronted at once with the difficulty of securing adequate holdings

to afford them the lumber that their business naturally demanded. These new concerns were also in a delicate position relative to the securing of privately owned lands, inasmuch as these, too, were largely held by the operators favored under the legislation of 1893.

Despite these appreciable handicaps the new concerns continued to exist and, in many cases, to expand, although the difficulties were almost insurmountable. They looked forward with hope to the dawning of 1918, when the leases of 1893 would automatically expire. But in 1913, through what The Lumbermen's Protective Association contend was political bribery and manipulation, (and the report of a Royal Commission properly appointed substantiates that contention,) the old leases were renewed to the then holders for a period of twenty years. That renewal took place five years before the original leases would expire and was made despite the vigorous protestations of the present members of The Lumbermen's Protective Association.

The Lumbermen's Protective Association has no quarrel with the large crown land lessees. The Association asks only a fair and equitable proportion of the crown timber lands. They advance the argument that from the standpoint of vested interests, in dollars and cents, and the further viewpoints of the number of men afforded employment and the total capacities of the plants that the members of the Association are of more practical benefit to the country than the large lessees, and that these grounds alone entitle them to consideration.

What the Association is Seeking

Briefly speaking, the Association seeks a division of the crown timber lands of New Brunswick on the basis of the practical value of each lumbering plant to the Province. The outstanding points in their request to the Provincial Government at Fredericton in connection with the proposed redistribution, are as follows:

(1). That the matter of the redistribution be referred at once to the Advisory Forestry Commission with the following instructions:

(a). That the Commission undertake at once a systematic survey, examination and classification of the Crown Timber Lands on the Miramichi and the Pockmouche Rivers, by employing an adequate force of trained foresters to ascertain the quantity and quality of the timber on the various crown land areas.

(b). That in the event of there not being available a sufficient number of trained foresters, the Commission secure the services of competent practical men in the examination of lumber lands, such practical men to be appointed on the recommendation of the Government examiners, Messrs. Prince, Vanderbeck and McFadden.

(c). That on the completion of the survey, examination and

David J. Buckley, Newcastle, N.B.
Former President, who is now member of
Crown Lands Advisory Board

F. D. Swim, Doaktown, N.B.,
who is presiding officer of Lumbermen's
Protective Association

J. W. Maloney, Chatham, N.B.
Prominent young lumberman who is Vice-
president of L. P. A.

THE LUMBERMEN LEGISLATORS OF THE MARITIME PROVINCES

Hon. E. A. Smith, (Westmoreland, N.B.)
Minister of Lands & Mines

Hon. Wm. Currie, (Restigouche, N.B.)
Speaker of the Legislative Assembly

Hon. J. P. Burchill, (Northumberland, N.B.)
Former Speaker of Legislative Assembly

John L. Peck, M.L.A.
(Albert, N.B.)

Jas. K. Pinder, M.L.A.
(York, N.B.)

Benj. F. Smith, M.L.A.
(Carleton, N.B.)

Wm. S. Sutton, M.L.A.
(Carleton, N.B.)

John A. Young, M.L.A.
(York, N.B.)

Hon. Fulton J. Logan, (Halifax County, N.S.)
Member of Legislative Council

Hon. R. M. MacGregor, (Pictou, N.S.)
Member of Executive Council

Rufus S. Carter, M.L.A.
(Cumberland, N.S.)

classification of the crown timber land areas on the Miramichi and Pockmouche Rivers, the Commission undertake a similar investigation of the crown land areas in the various other portions of the province.

(d). That the Commission take steps to secure a statement of the average cut for the past three years of all mill-owners at their plants in the province.

(e). That taking the said average cut as a basis the Commission undertake to apportion the lands proportionately as the average cut of each mill-owner bears to the total quantity of timber available, after first reserving an amount to be determined by the Commission to be distributed among operators with logging equipment to a value to be determined by the Commission, such operators not owning saw mills.

(f). That the Commission undertake to apportion the lands under the proposed re-distribution in as close proximity to the established mills as is possible.

(g). That the Commission reserve special licenses for hemlock bark for operators requiring the same, and that a special license be issued for all hardwood in cases where the saw mill licenses have not the facilities for manufacturing hardwood.

(h). That the present applicants for additional holdings be not required in the re-distribution to accept areas which have been cut over by operators contrary to the existing Crown Land regulations.

(i). That the Commission proceed to the actual re-distribution of the lands on the Miramichi and Pockmouche Rivers as soon as the information required is made available, and that the re-distribution of the lands in other portions of the province be carried out as soon afterwards as is practicable.

(j). That paper licenses and pulp licenses be issued on the same basis as saw mill licenses with the exception that the average cut for the last three operating years form the basis for the distribution.

(k). That in the case of transfers of leases since 1913 between operators any holdings taken out of the said leases be paid for in an amount paid for the transfer after deducting an amount equal to the value of the timber cut on the transferred areas since the date of the transfers; this amount to be paid to the leasee and to be raised by a special assessment per mile on all license holders, and to be added to the amount of the bonus payable for the leases for the first year only.

(2). That on receiving the recommendation of the Advisory Forestry Commission in the matter, the Lieutenant Governor in Council take steps at the next session of the Legislative Assembly (1919) to repeal the Act of 1914, respecting Crown Timber Lands, being 3 George V., Cap. 11, and introduce legislation enabling it to carry out the recommendation of the said Commission.

The Officers of the Association.

Many outstanding figures in the lumbering industry in New Brunswick are members of The Lumbermen's Protective Association. The present board of officers are as follows: Frank D. Swim, ex M.P.P., Doaktown, president; J. W. Maloney, Newcastle, vice-president; George M. McDade, Chatham, secretary; Charles Reinsborrow, Chatham, treasurer; Robert Loggie, A. & R. Loggie Co., Ltd., Loggieville, W. S. Loggie, M.P., Chatham, J. D. Volckman, (New Brunswick Sulphate Fibre Co., Ltd.) Millerton; W. G. Thurber (Miller Extracts, Limited) Millerton, William Anderson, Burnt Church, executive committee.

At the organization of the association in the early part of 1918, Mr. David J. Buckley, of Newcastle, was elected as the first president. No operator has taken a more active part in the campaign for a redistribution of the crown lands than Mr. Buckley, and to him is due in no small measure the formation of the association representing all the interests which it is contended had been discriminated against. Mr. Buckley retired from the presidency in the month of June last on his election to the Crown Lands Advisory Board of the Province as the representative of the lumbermen of New Brunswick. That election was not only an evidence of Mr. Buckley's ability and popularity, but it also served to indicate the feeling in favor of a redistribution as the matter was a big issue in the election to the board. Mr. Buckley brought a wealth of experience to the administration of the affairs of the board. Regarded as a man of keen business instincts and unquestionably one of the most successful operators in the province, Mr. Buckley has, moreover, a practical knowledge of the various ramifications of the manufacture of lumber. The representative of the license holders on the Advisory Board is a self-made man. He is fifty-five years of age, and has been for over thirty years engaged in the lumbering business in this province.

Mr. Buckley originally operated a large mill at Rogersville, N. B., and in 1911 erected a modernly equipped plant at Newcastle. This plant has a capacity of Nine Million sup. feet, and the main output is for the English and American markets. L. W. Buckley is associated

with his father in the business. Mr. Buckley is chairman of the Lumbermen's Association for Northumberland County.

Mr. Frank D. Swim, who succeeded Mr. Buckley in the presidency of the Association, is a leading lumber merchant of Doaktown, N. B. He is a prominent citizen of the northern section of New Brunswick, having represented Northumberland in the Provincial Legislature, at Fredericton, as an independent for one term. Mr. Swim has been connected with the lumbering business for the past twenty-five years. At present he is operating two large saw mills, and up to within two years, has been a large manufacturer of building materials, house finishings, etc. He handles from three to five millions of lumber each year. For a quarter of a century Mr. Swim represented his parish in the municipal council and acted as warden of the council for one term. While a member of the Provincial Legislature from 1912-1916, he was regarded as a forceful debater and an excellent representative of the people. Like Mr. Buckley, Mr. Swim has a thorough knowledge of the lumbering business, and is also particularly well versed in the details of the legislation affecting the industry. He is eminently qualified for the important position to which he has been called. Mr. Swim received his business education at the Ontario Business College, Belleville, Ont.

Association Entirely Free From Politics.

Mr. J. W. Maloney, of Newcastle, the Vice-President of the Association, is one of the more prominent of the younger lumbermen of the province. His father, John Maloney, of Rogersville, is well and favorably known in the industry, having spent his life time in the business. Mr. Maloney, Jr., has complete charge of the large mill at Chatham Head. He is a leading business man, and is regarded as one of the most successful operators on the North shore. The future, undoubtedly holds forth bright things for Mr. Maloney in the lumbering industry.

The other officers and members of the association are men, prominent in the lumbering industry in New Brunswick. While the issue involved is of a political character, it should be distinctly understood, that the association is entirely free from politics. In fact, politics is absolutely foreign to the aims of the association, which includes in its membership leading men from both political parties, who are actuated solely by a desire to secure a fair and reasonable adjustment of the Crown Timber Lands.

St. John Will Be Mecca of the Trade

The next annual gathering of the Canadian Lumbermen's Association will be held in St. John early in February. At the last convention, held in Montreal, Ottawa was named as the 1919 place of meeting, but owing to the changes that have occurred in the industry since then by reason of the cessation of the war, the forming of the Eastern Spruce Manufacturers' Association, the development of the export business, and the large additions to membership, a change has been deemed advisable. At a recent session of the executive of the Canadian Lumbermen's Association, in Montreal, representatives of New Brunswick lumber interests extended such a strong and hearty invitation to the Association to meet in St. John that it was decided to accept. Holding the annual assembly outside of Ottawa, Montreal and Toronto is a distinctly progressive step and indicates a widening character of the membership of the organization and its growing national aspect. President W. Gerard Power, St. Pacomé, P. Q., and Secretary Frank Hawkins, of Ottawa, will visit St. John in the near future being appointed a committee to make all final arrangements. On their return fuller details regarding the 1919 convention and the exact dates in February will be announced.

Mr. Rogers Now Operating in Parry Sound

Mr. Mark Rogers, who recently bought the business of Neiber-gall, Cook & Company, Parry Sound, Ont., has had an extensive experience in the lumber and woodworking lines, having spent most of his life in the activities of the forest. He worked at one time for T. Stinson at Minden. Some eight years ago, in company with E. A. Rogers, he rented the mills at that point, and operations were carried on under the name of Rogers Bros. In 1916 E. A. Rogers left the business and Mark Rogers carried it along for another year under the old name. About five years ago G. Holinshead and the subject of this reference bought some timber in Mukoka and operated at Huntsville as Holinshead and Rogers. The latter closed up his operations at Minden in 1917 and the firm sold their claims at Huntsville early during the present year. Mr. Rogers is now laying in a stock of logs at Parry Sound and intends running the sawmill as well as the planing mill. He hopes to develop the business in both the wholesale and retail lines, and will deal in rough and dressed lumber, interior trim as well as V joint siding, casing, base, doors, sash, etc. Mr. Rogers is also equipped to do planing in transit.

Canadian Forestry Leaders Highly Honored

Brig.-General McDougall,
Director-General of the C. F. Corps

The Director General of the Canadian Forestry Corps, Brig.-General Alex. McDougall, who has frequently been referred to as the "lord of the lumberjacks," and has made a name for himself throughout the British Empire by reason of his organizing ability and aggressive industry, was recently tendered a banquet in London, Eng., by the heads of the department under his command. Brig.-Gen. McDougall has known no reverse in anything that he has undertaken. He is regarded in many respects as a master man who knows how to conceive, plan and execute. The more difficult the proposition the greater the interest he takes in it, and with him, work is a passion. He always finishes what he starts.

At a recent banquet in London, England, when the Dominion

Government was represented by Sir Geo. Perley, Canadian High Commissioner, and Hon. C. J. Doherty, of Ottawa, there were present from the British Government, Sir Albert Stanley, president of the Board of Trade, Sir W. J. Bull, Timber Controller, and Arthur Howins, under secretary for colonial affairs. Appreciative references and warm tributes were paid to the Canadian Forestry Corps, and Brig. General McDougall in particular for the part played in winning the war.

General McDougall, in a grateful response, dwelt upon the history of the corps, its formation, the unity and harmony which prevailed and the general good fellowship throughout the ranks. He stated that in the production of timber the Canadian Forestry Corps had saved ocean tonnage equivalent to feeding 15,000,000 people. It was announced by Sir W. J. Bull, timber controller, that as soon as possible the place of Canadians in the Forestry Corps would be taken by British soldiers in order to allow the boys from the Dominion to return home after several years' faithful service. To direct operations a number of Canadian officers will be retained.

Col. J. B. White, D.S.O. of Montreal, who has been appointed Brig.-General, in view of his excellent work in directing the Canadian Forestry Corps in France, is returning to Canada. The Colonel's labors in France have been valued highly by the British and French governments, and his organization was effective and strong in every particular. It is said that Col. White's corps, in proportion to numbers, holds the record among all those engaged in forestry operations. Col. J. B. White, who will now be known as Gen. White, is well and worthily known. He was for very many years in the woods and sawmill department of the Riordon Pulp & Paper Company and Kipawa Fibre Company. As a technical expert he went overseas with the 224th battalion under Brig. General McDougall. Later he returned to the Dominion and organized the 242nd Forestry Battalion. When he and his men reached England he was made director of Canadian forestry and timber operations in France, where several thousand men had been under him, at one time the forestry force totalling 14,000 men. In December, 1917, the splendid work of General White was officially recognized when he was awarded the Distinguished Service Order. It is expected that he will return to Canada at an early date.

Shipbuilding News from the East

Work is to start at once by John F. Deveau, Meteghan, N. S., on the construction of a 3 masted ship.

Mr. Huntley, Parrsboro, N. S., will start work at once on two, three-masted schooners of about 400 tons at the Houlley Shipyard.

Capt. Thos. German, Meteghan, N. S., has started work on the erection of a 3 masted, 375 ton schooner, for J. E. Gaskill, of Grand Manan, N. S.

A tern schooner of 366 tons register was launched lately at Port Greville, N. S. She was built for Jas. G. Kirkpatrick, M.P.P., and is named the "Milverene."

The four masted auxiliary schooner, Huntley, built by Capt. David A. Huntley, for Halifax parties, was recently launched at Scott's Bay, N. S. She registers 480 tons and is very handsomely modeled.

The contract has been awarded to the Scotia Shipbuilding Company, Yarmouth, N. S., for the construction of a 250-ton schooner.

The company will start work on another vessel the same size or larger, in the spring.

The Gulf of St. Lawrence Shipping and Trading Company, Ltd., has been incorporated, with head office at Quebec, P. Q., and capital stock of \$3,000,000, to carry on business among other things as lumber merchants and manufacturers of and dealers in pulp and paper of all kinds, hewed lumber and timber, logs, ties, shingles, wood pulp, etc. Among those interested are Wm. K. McKeown and L. C. Herdman, of Montreal.

Mr. Booth Replies to Press Criticism

Never Received Foot of Timber Lands Directly or Indirectly for Which He Did Not Pay Highest Figure

J. R. Booth, of Ottawa, who is almost as widely known in connection with his pulp and paper enterprises as in his great sawmill and timber operations, had a strike on his hands in his newsprint plant for some time. The other day an Ottawa paper published an editorial in which it cast some reflections upon Mr. Booth. The latter does not often rush into print, but when he does his remarks are straight from the shoulder and there is no doubt of the whereabouts of his attitude. In the course of his letter, the "Lumber King" refers to certain charges of the Ottawa press that he is worth \$30,000,000, inferring by implication that he had amassed this great wealth out of the men's labor and should, consequently, pay them higher wages; and, secondly, that he had obtained from the people of Canada certain rights to cut timber, use water powers and rivers, build railroads, etc., and had, therefore, got something for nothing that belonged to the people.

Replying to these allegations, Mr. Booth says:

I think I ought to explain to the public my position with regard to any rights I have to cut timber and use water-powers, and any rights I may have acquired when I was building and operating the Canada Atlantic Railway. As to my being worth thirty million dollars, that is all bosh and is irrelevant anyway, but it may be surprising to some of your readers to know that I have neither now, nor at any time have I had, one foot of timber lands from any Government, directly or indirectly. All the timber lands that I hold I bought in the open market just in the same way as Mr. P. D. Ross, editor of the Ottawa Journal, might buy a printing press, and I paid for most of them a price that was considered exorbitant at the time. The solitary exception was the Montreal river concession that a party had agreed to purchase, but failed to comply with the conditions of sale. The Ontario Government then put it in the market again and called for tenders for the right to cut pulpwood for twenty years. I tendered for it, and my tender of \$300,000 was accepted, but before I cut anything on it, the Government opened it up for mining and the prospectors burnt up about a third of the timber. I have never got enough off this limit to pay the interest on my money, and I should be pleased to sell it to Mr. P. D. Ross, or anyone else, for much less money than I paid for it. As Mr. Ross has had his paper so cheap for so long, perhaps he could afford to buy it. As for the four hundred miles of railroad that I built, including the bridge (nearly a mile long) over the St. Lawrence River, the elevators, storehouses and town at Depot Harbor, I am proud of this work and think it was to the advantage of the people of Canada in bringing to the markets and to the seaboard millions of dollars worth of grain and lumber that could not have been brought out without it. But I bought and paid for the land on which this railroad was built, and did not even get the usual subsidy for a large part of it.

As to the water-power at the Chaudiere, I bought and paid for it, and have erected there a plant that employs hundreds of men and pays over \$60,000 a year in taxes to the City of Ottawa, while right beside me at the Chaudiere there are water lots which have never been developed, and are no good to anyone in their present state.

I have not written this letter to boast of what I have done, but I do not wish people to think that I have got something for nothing, and that I am unfair to my men, with whom I have had the best relations for so many years, and shall have again, if outsiders would not seek to stir up strife.

Alex. Greig, of Greig & Morris, Toronto, returned recently from an extended business trip to B. C., Washington and Oregon, during which he established several new connections for his firm. Mr. Greig reports that the feeling in the west is one of optimism regarding the lumber industry during the coming year.

The American Barking Drum Department of the Fibre Making Processes Inc., 440 South Dearborn Street, Chicago, which has been conducted under the name of the American Barking Drum Company, will from this out be operated under the name of Fibre Making Processes, Inc.

Retail Dealers Form Live District Branch

Enthusiastic Meeting of Lumbermen Considers Inequalities in Business Assessment, Unfair Competition in Trade and Using Plan Books

The benefits to be secured from co-operation among the members of the Retail Lumber trade have been so well demonstrated in Ontario during the past year that the outlook for greatly increased membership in the Ontario Retail Lumber Dealers Association during 1919 is very bright. An indication of this is afforded by events which have recently transpired in connection with the trade in one of the important sections of the province. As the result of discussion of the association and its work the dealers in a number of towns, which are conveniently situated for holding meetings at Orangeville, Ont., have formed a local group which will hold meetings about once a month, and the prospect is that this newest local association or group of members will set the pace for the older local associations.

J. B. Mackenzie of Georgetown, Ont., is perhaps the one who is most directly responsible for the forming of this local group. He attended the first special general meeting of the Association on September 3rd, at Toronto, and noted among other things, that a resolution was carried approving of the formation of local groups. One of the wholesale salesmen who call upon him regularly is Mr. A. Dick of the R. Laidlaw Lumber Company, Ltd., Toronto, who has done a great deal towards getting the local dealers interested in the Association. Mr. Mackenzie talked the matter over with him, and Mr. Dick followed it up by discussing it with a number of other dealers. It was found that there were a sufficient number of dealers interested in the suggestion and a meeting was called for December 4th, at Orangeville, to which dealers were invited from a number of towns, including Orangeville, Georgetown, Arthur, Elora, Mount Forest, Wingham, Harriston, Shelbourne.

At 1.30 p.m. on December 4th, when the meeting was opened in the Council Chamber of the town hall at Orangeville, the following dealers were present: J. A. Matthews, Orangeville; J. B. Mackenzie, Georgetown; Udney Richardson, M.P.P., Elora; W. G. Gorvett, Arthur; Major J. E. L. Streight, Islington; John Howes, Harriston; Eugene Murphy, Jr., Mount Forest; Geo. Ireland, Shelburne; A. Dick, wholesale representative of the R. Laidlaw Lumber Company, Ltd., Toronto, and H. Boulton, Secretary of the Ontario Retail Lumber Dealers Association.

Mr. J. A. Matthews was appointed chairman of the meeting and Mr. Boulton, secretary. The chairman then invited Mr. A. Dick to explain the reasons which had led to the calling of the meeting.

The Benefit of Social Groups

Mr. Dick stated that the meeting was the result of a resolution carried at the general meeting of the Ontario Retail Lumber Dealers Association, on September 3rd, providing for the organization of smaller local groups among the members of the association with the object of providing for more frequent meetings among members whose interests were mutual. He had talked this matter over with a number of the dealers and found a general desire for the formation of a branch, centred at Orangeville, which could deal with local problems and prepare resolutions in regard to them for presentation at the annual meeting of the Association next February. It was felt among the local dealers that, if they adopted such a plan, their local problems would be well discussed at the general convention. One of the most enthusiastic dealers he had met in discussing the matter was Mr. J. B. Mackenzie of Georgetown, who had asked him to arrange to have the dealers brought together for a meeting. Every dealer he had spoken to on the subject had been keenly interested. He had then submitted the matter to the Secretary of the general association and the meeting had been the result.

The chairman next called the Secretary of the Association to speak to the members about the work which the Association is carrying on and the objects of the local groups. The Secretary outlined the growth of the association since its inception in the minds of a few prominent retailers a little over a year ago, telling of the interest which the Association had evoked among the dealers and the success which had been secured up to date, both in securing members and attending to the interests of members in connection with many of the problems which formerly they had not been able to solve by individual effort.

The chairman then called upon the dealers present to discuss the proposal that a local branch of the Association should be formed.

Each member was interested in the project and there was no question from the first as to what the outcome would be.

Thinks Assessment Act Unjust

Mr. J. B. Mackenzie, Georgetown, introduced his remarks by a reference to the value of the social feature in connection with meetings of local branches of the Association. He believed that the social feature was worth more than any other. There were many matters, however, which would come up in connection with which they could do valuable work. He referred, for instance, to the competition which the retail lumber dealers had to meet from substitute material, such for instance as metal siding, patent roofing, etc. He was convinced that frequent discussions of these problems would enable them to meet the competition much more successfully than they had in the past.

Another matter which they ought to discuss was the Ontario Business Assessment Act. He was being assessed 60 per cent. of the value of his property, whereas a coal merchant paid only on 50 per cent., and a hardware merchant in the same town was only assessed 35 per cent. He could imagine no reason for this. It required much more space to carry a stock of lumber than a stock of hardware. Therefore the burden fell upon the lumber dealer very heavily.

Another instance of subjects for discussion among dealers at such meetings was the question whether a customer who wanted a single scantling or a small quantity of material should be charged at the same rate as a customer who ordered 1,000 ft. or more. He himself, quoted higher relative prices for 100 ft. than for 1,000 ft.

Mr. Udney Richardson, M.P.P. Elora, said that Mr. Mackenzie had opened up a number of subjects which indicated quite clearly that they ought to hold frequent meetings in order to discuss such matters. In connection with the Business Assessment Act they ought to do something right away. He would be glad, if they formed a branch association, to have them pass a resolution on this subject instructing the Secretary to send it in a letter to him, to be laid before the Ontario Legislature at its next session. There was a rather similar situation in connection with the Workmen's Compensation Act which the Association could also take up. He was being assessed at something like double the assessment of a furniture factory although there was no doubt there was a far greater risk in connection with a furniture factory than in his business. He also reminded the dealers present of the situation in connection with the Mechanics' Lien Act of Ontario, drawing their attention to the fact that through the work of the Association and of the Toronto dealers some important amendments had been secured at the last session of the Legislature, affording an indication of the benefits they might secure by co-operation. As a retail lumber dealer, he was much interested in doing all he could to benefit the retail trade in general and he believed thoroughly in the value of forming both the central Association and the local groups.

Some Kinds of Unfair Competition.

The retail lumber dealer was up against stiff competition to-day. There were so many other lines of business competing with the retail lumber dealers trade that the cream of the business was nearly all gone. In his district he also had a trouble which had frequently been referred to, namely, competition of men who are not recognized dealers, or who are not even dealers at all. Some wholesalers, especially one or two in Toronto, were selling to such parties, enabling them to upset the market. The competitor with small quantities of stock carried as a side line to his regular trade would dispose of some of it at a fair price and, when he wanted to unload, would cut the price and upset everything. In Elora this competition was very prevalent. There were a large number of important towns within a short distance of Elora on all sides, and these competitors, who were not bona fide lumber dealers, were making much trouble for him. The prospective customer would go to him for a price and then would use the quotation in securing prices from some of these competitors, mentioning that he could get it for a certain price, and then secure quotations to cut the price.

Mr. Richardson expressed much gratification at the report of the Secretary in regard to the negotiations with a number of wholesalers and manufacturers in connection with complaints on subjects of this nature and also complaints about delayed shipments, etc. There was

no question in his mind as to the benefit of such co-operation. He believed it to be in the interest of the dealers to give the Central Association their heartiest support.

Mr. W. G. Gorvett of Arthur, expressed interest in the matters which had already been discussed. He had had troubles similar to some of those referred to. There was a waggon merchant, for instance, in Arthur, who occasionally got a carload of shingles from a wholesaler and then proceeded to cut the heart out of the shingle business. He was convinced that it would be a good thing for the local dealers to come together once in a while and talk over such things. Undoubtedly they would be able to find a way out of such unsatisfactory situations.

The chairman referred to the matter of farmers' clubs and there was a little discussion upon this subject, but the general opinion seemed to be that trouble from this source would soon disappear as the farmers were beginning to realize in many cases that they were being stung.

The Benefits of Advertising Literature.

Mr. Mackenzie introduced a discussion on the subject of advertising literature and reported that the Shingle Agency of British Columbia had furnished him with 500 copies of an attractive booklet on B. C. shingles, on the cover of which they had written his own name and address. He was slipping one of these into each of his letters to customers. The Shingle Agency had rendered him this service free of charge, even paid for printing his name and for the express on the parcel. This was just a little instance of many similar publications which he believed were available and which the dealers would be wise to utilize.

Major J. E. L. Streight, Islington, Ont., thought that possibly he was a little too far away from Orangeville to belong to such a local group. He showed by his discussion of matters referred to by previous speakers, however, that his interests were identical to theirs and his problems the same as those he had to deal with. The matter of the Business Assessment Act was something in which he was much interested. He was paying a heavy assessment, while a merchant across the road was paying only on 35 per cent. He thought that the Ontario Government must imagine the retail lumber dealer was making a lot of money. He approved heartily of the idea of passing a resolution and having the Central Association forward it to the Ontario Legislature through Mr. Richardson, M.P.P. They were fortunate in having a member of the Legislature among the members of the Association. He also said that he could give the names of some Toronto wholesalers who were selling stock, such as shingles, to blacksmiths and others, who were not entitled to obtain such material. Major Streight had formerly purchased some of his stock from these wholesalers, but he had dropped them entirely when he found them selling to trade pirates. He was satisfied that the Ontario Retail Lumber Dealers Association was a wonderful benefit to the whole trade and he hoped that it would prosper greatly.

The Changing Spirit of the Times.

Since he returned to Canada after being a prisoner of war in Germany for three years, Major Streight had found a great change in the conditions surrounding the retail lumber trade. When he went away every man was looking after his own interests and neglecting the interests of others in the trade. His own business was located so close to Toronto that the dealers in the city had formerly given him a great deal of trouble. Whenever a customer of his went to hunt prices among Toronto dealers he had been able to get a lower quotation. The Toronto dealers would knock off a dollar or so on the price and get the business. During his absence the Retail Lumber dealers had changed their methods, and now he found that all the Toronto dealers were playing the game fairly with one another and with firms located in the neighborhood of Toronto. He had not found, since his return, a single instance of an order for lumber or shingles coming out of a Toronto yard to his district at anything but reasonable prices.

Major Streight was greatly impressed with the value of the "Monthly Bulletin," published by the Ontario Retail Lumber Dealers Association. The list of prices published in the Bulletin was in itself a great assistance to all the dealers. He could simply put the list in the hands of his yard foreman or anyone else of the staff and say there are the prices, go ahead and charge them. From his own experience he was satisfied that his business was making better progress to-day than it ever was before. And why should not this be so? There was only a certain amount of trade to be obtained and he could not see why they should not handle it at a profit, rather than at a loss. He was glad to report that in Toronto and in the surrounding district they were to-day selling stock at a sufficient margin of profit to make their business satisfactory. For these reasons he thought that the dealers in the district centered at Orangeville could not do better than get together in a similar way. Even the most

difficult of their problems could then be handled more successfully.

The difficulty experienced in connection with a wholesaler selling shingles, etc. to some waggon maker, blacksmith or hardware dealer could be attended to in the same way as he was dealing with the manufacturers of galvanized roofing, etc. If they came to him and wanted him to take the agency for their line, he insisted on receiving a signed contract from them giving him his exclusive area, so that any sales made in that area either went through him or gave him a profit. As retail lumber dealers they could persuade the wholesaler not to sell to the hardware man and other similar competitors, or else they could refuse to buy from him and thus show him that it was in his interests to act in accordance with their wishes.

In conclusion Major Streight said that he was convinced from the way in which the dealers around Toronto were progressing that the lumbermen could make a fair living out of their business, and he did not see why the dealers in the rural districts could not do the same.

Mr. John Howes, Harrison, told of a man who runs a chopping mill in his neighborhood and who buys a carload or two of shingles once a year. Whenever this carload arrived in town the price of shingles went down.

Mr. Eugene Murphy, Jr., Mount Forest, had a similar tale to tell, only in his case the shingles were handled by a hardware merchant.

Mr. J. B. Mackenzie, while not suggesting that he could offer a sure cure for this trouble, reported that he had made a point always of talking about the equality of his goods, and he believed that this helped him greatly whenever competition, such as the other members had complained of turned up.

The Status of Manufacturing Firms

Mr. George Ireland, Shelburne, spoke of the competition of some of the large manufacturing firms which were selling to consumers throughout the Province at the same price as they charged the dealer. If it was possible for the Association to improve this situation it would make itself very solid with the dealers.

An extensive discussion followed on this subject, showing that the members were agreed that the only way to deal with such a difficulty was to lay the situation before the manufacturer and urge him that it would be in his own interest to protect the retailers. Some manufacturers would undoubtedly see it in this light. If any of them failed to do so the members of the Association could buy their stocks from other manufacturers. The offending manufacturer, under such conditions, would realize that he was making a mistake, and would change his methods.

This concluded the general discussion and the chairman asked the dealers to consider the passing of a resolution to form a local branch. On motion of Mr. Richardson, seconded by Mr. MacKenzie, it was then carried unanimously that the branch of the O. R. L. D. A. made up of dealers from towns located at a convenient distance from Orangeville, should be formed.

There then followed some discussion in regard to the name of the branch Association. It was thought that any name they might adopt would be open to criticism, because it might prevent some eligible dealer from joining, and it was concluded that it would be wise to have the branch known by a number, and that, if the Central Association saw fit, other branches formed subsequently could be given succeeding numbers so as to remove the difficulty which might result from definite local names. Inasmuch as the Province is divided into five districts for the Association, each of which has its local Association, the new branch decided to call itself Branch Number 6.

The Election of Branch Officers

The chairman called for nominations for officers with the result that the following were elected unanimously:

District Chairman, J. A. Matthews, Orangeville; District Vice Chairman and Honorary Secretary, J. B. MacKenzie, Georgetown; District Committee, Udney Richardson, Elora; W. G. Gorvett, Arthur; John Howes, Harrison; Eugene Murphy, Jr., Mount Forest.

Mr. Matthews expressed his appreciation of his election as chairman and hoped that the Association would have a successful year.

The members then took up the discussion of some further matters. Mr. MacKenzie spoke of the benefit members would obtain from belonging to the Association. He referred particularly to the "Monthly Bulletin," published by the Association, saying that it was full of valuable information. For instance, he had never known that dealers were entitled to an extra 500 pounds allowance on flat cars during the winter months until he had seen it in The Monthly Bulletin. He intended to see that he obtained this allowance in all future cases, and he was going to save many times the cost of membership in the Association. He also brought up the matter of plan books and suggested that it would be a good thing to get into communication with a certain firm which published a barn plan, with a full bill of materials for

everything needed, including lumber. This firm was interested in the matter, as it manufactured the hardware to be used in the barn. The barn specified was a plank barn, specially suited to the requirements of their district, and he believed that this firm would gladly furnish them with copies of the plan and bill of material, on which they could print their own firm names. These plans would be of great assistance to them in obtaining business. They could show them to a farmer and tell him in a minute how much material was needed for the full barn and what it would cost.

Barn Plan and Bill of Materials

This suggestion appealed so strongly to the members that a motion was presented by Mr. MacKenzie, seconded by Mr. Murphy, that Mr. Udney Richardson should get in touch with the firm referred to and learn whether they would be agreeable to such a proposal, also suggesting that one of the representatives of the firm should

attend the next meeting of the district Association to complete arrangements, and that as soon as Mr. Richardson had a report on the subject to present, another meeting should be called without delay, if there was a likelihood of the arrangement being carried out.

It was moved by Mr. John Howes, seconded by Mr. MacKenzie, and carried, that the Ontario Retail Lumber Dealers Association be requested to lay before the Ontario Legislature the inequalities of the Ontario Business Assessment Act and to urge them to pass such amendments as will result in the retail lumber trade being assessed more in accordance with the assessments of other trades, and that a copy of this resolution should be sent to Mr. Udney Richardson, M.P.P., a member of the Association, with a request that he bring it to the attention of the Legislature.

This concluded the formal business of the meeting, and after a vote of thanks to the Orangeville Town Council for the use of the Council Chamber had been passed, the meeting adjourned.

Canadian Building Industries Conference

The Outlook for Construction Work Reviewed—Splendid Demand in Prospect for Lumber Both at Home and Abroad—Government will Co-operate

All lumbermen are vitally interested in construction work and that the outlook for the coming year is considered favorable was reflected in the stirring addresses and reports of committees presented at the Conference of Canadian Building Industries, held in Ottawa, on November 26, 27 and 28. There was a large and representative attendance and considerable enthusiasm manifested. It was decided to divide the conference into three sections, general contractors, sub or trade contractors and builders' supply men.

Several resolutions were passed which were presented to the Federal Government. Sir Thomas White pointed out to the deputation that one of the best methods of obtaining prosperity was to obtain a large block of business in connection with the reconstruction of France and Belgium. Another way of meeting the situation was by undertaking domestic works extensively. Railways were run down and factories suffering for lack of repair, and it was his belief that the business resulting from overseas and domestic reconstruction work would absorb a very considerable amount of labor, lumber and general building materials, and would be sufficient to maintain our prosperity. In regard to housing, Sir Thomas said that this was one of the most important questions brought up. It had been considered at the recent meeting of the provincial premiers. He had seen some difficulty, however, in the Dominion Government undertaking a housing programme throughout the country, but it was possible some project might be put forth. At the recent meeting of the provincial premiers they had been advised if they needed financial assistance to deal with the situation, the Dominion Government would supply it. The Minister said he was sure the Government would be sympathetic with the representations as to the use of Canadian materials.

Hon. F. B. Carvell, Minister of Public Works, declared that the department would not hesitate to make expenditures on works which were reasonable and useful. As to the use of Canadian materials, it had always been his policy to adhere as closely as possible to this in the past. He was very much gratified with the proposal that all public works be let by public tender. Only twice since he had assumed his present office had that principle been diverted from.

One of the features of the gathering was the admirable address delivered by Hon. A. K. McLean, who reviewed many points of interest and pointed out that arrangements were being completed whereby large orders for lumber and timber would come to Canada from the devastated parts of Europe. He said that in England they were proposing to erect between 300,000 and 400,000 buildings for housing—not all within a year or two, perhaps, but that was the programme laid out. In this project, as producers of certain forms of building materials, we must participate. So far as restoration work was concerned outside of Canada, we could count on a very large share of business, which would contribute to our prosperity in Canada, and help to solve one of the problems which confront us in the demobilization of our army and war workers. There were 200,000 engaged in munition work prior to the signing of the armistice, and there were probably 400,000 men overseas and in uniform, whose demobilization presented a possible problem. Mr. McLean said that his hearers were interested in certain problems connected with the building industry. Probably they had difficulty during the last three years. Most of them would never be charged with being war profiteers, but he imagined they were

looking forward to the day when they could pay a good-sized business profits tax and income tax.

How Building Operations Fell Off

However, the war had presented problems which were particularly applicable to industries represented there. In the first place, it had resulted in an increased demand for housing. Secondly, there had been a cessation in repair of buildings. Thirdly, it had increased the cost of building rates of interest, and fourthly, it had lessened the supply of building materials and, of course, costs had increased. These four matters were only some of the effects of the war on the industry. Mr. Anglin had given him figures in connection with building activities previous to the war. In the year 1912 in 35 of the leading cities of Canada, exclusive of railway work, dock work, etc., building construction amounted to \$185,000,000; in 1913, the same cities had a total of \$165,000,000. During the last three or four years there had only been \$40,000,000 worth of building. Evidently therefore, there had been building deferred during the last three or four years at least to the extent of \$100,000,000 per year, and he thought that taking Canada generally, deferred construction might be fairly estimated at at least \$500,000,000, and one might safely say one billion dollars. If that was the demand, it presumed more activity and it meant prosperous times for Canada.

Mr. McLean added he would not endeavor to present a solution of the problem of high prices. He understood they were going to organize some committee and he hoped that before they left members of the Government might have an opportunity of meeting the committee so that they might discuss the problem and have their viewpoint as to how the Government should assist. It was a movement in which everyone should assist. In the building programme, governments, provincial and local, which have deferred construction programmes, should resume them at once. There are no restrictions today as to the issue of securities, so that these bodies are at liberty to procure money for construction projects. It appeared to be the duty of all representative bodies to give a lead to the people of Canada.

Should Employ Canadian Materials.

Mr. Arthur Dinnis, chairman of the Committee on the Building Situation, presented the following recommendation of that committee:

That a committee wait on the Minister of Public Works and advocate the use of Canadian materials in the erection of all public buildings.

That the Department of Public Works be asked to commence operations on all delayed public works as soon as possible.

That the Government call for tenders in the usual way on stated plans and specifications for all works let under the Dry Dock Subsidy Act.

That the Government grant substantial Federal aid for the purpose of constructing permanent national roads and that such work be let by tender.

That any work for the Federal or Provincial Governments, municipalities, railways, corporations, etc., be let and executed under statutory form of contract.

That where commissioners are appointed to undertake housing

operations the Association of Canadian Building and Construction Industries shall have representation on the commission.

That the sub-committee be instructed to discuss with the Minister of Public Works the advisability of proceeding at once with the housing propositions now before the Government, with a view of providing proper accommodation for industrial workers, and eliminating slum districts in large centers.

That the development of the natural resources of Canada be subsidized wherever necessary to compete with foreign materials.

That this conference pledge itself never again to use German or Austrian made goods.

With regard to the last clause, that the conference pledge itself against the use of Austrian and German goods, Mr. Somer, commissioner for New Brunswick, expressed the opinion that this matter should depend on whatever action was taken by the Mother Country. The ruling of the chair was that, as a political question, it was beyond the scope of the meeting.

Improving the Quality of Labor.

The report of the members of the Committee on Labor Conditions considered that rates of wages was outside their province and had confined themselves to a discussion of how the quality of labor might be improved.

"The avenues which present themselves to us, as building industries are three," stated the report.

First. By an active interest in all that pertains to the physical well being of the worker, particularly in the matter of housing.

Second. By a proper system of apprenticeship in all trades, through systematic training, through a personal outlay by every member of this association in the training of apprentices, both of time and money, through a broader appreciation of the fact that it is the duty of each and every member to take this matter upon his own shoulders.

Third. Through the promotion of technical training, which can be done by each individual contractor, interesting himself in this matter in his own district and bringing pressure to bear on municipal, provincial and federal governments, to establish this method of education and enlarge the scope of it throughout Canada.

This committee is further of opinion that a memorial should be prepared by this permanent committee for presentation to the Dominion Government, urging the vital necessity of an immediate large financial grant at the next Session of Parliament, for the furtherance of Technical Education, and with this in view, has appointed a sub-committee to ascertain the present position of the Dominion Government towards technical education, and to collate such data as would form the basis of a memorial. This sub-committee's report is appended hereto.

Representative Officers Elected.

The Executive Officers elected by the conference were: President, J. P. Anglin, Montreal; vice-presidents: Nova Scotia, J. C. Harvey, Halifax; Prince Edward Island, (to be elected); New Brunswick, J. A. Grant, St. John; Quebec, R. A. Galarneau, Quebec; Ontario, Fred Armstrong, Toronto; Manitoba, E. Cass, Winnipeg; Sask., W. A. Wilson, Regina; Alberta, J. E. McKenzie, Calgary; B. C., N. McLean, Vancouver; hon. treasurer, G. A. Crain, Ottawa; hon. secretary, A. H. Dancy, Toronto.

The General Contractors' Section appointed the following officers: A. I. Garvock, of Ottawa, chairman; G. A. Crain, of Ottawa, secretary-treasurer; Directors: J. P. Anglin, Montreal; J. Gosselin, Levis; E. Cass, of Winnipeg; H. Hayman, London; A. H. Dancy, Toronto. It was also resolved that the Builders' Exchanges be asked to appoint a general contractor as ex-officio member of this organization.

The officers elected by the other sections for the coming year were:

Trade section—W. A. Mattice, of Ottawa, chairman; W. E. Dillon, of Toronto, vice-chairman; E. R. Dennis, of London, secretary.

Supply section—W. E. Ramsay, Montreal, chairman; J. M. Dupuis, Verdun, vice-chairman; W. F. Evans, Toronto, secretary.

Newsy Briefs from Ottawa District

Lumbermen at Ottawa evinced considerable interest as to the distribution of \$25,000,000 which the Federal Government recently decided to loan to the various provinces to further housing conditions. The prospect of such a mammoth scheme being carried into execution means a big thing for the lumber trade of Canada, and hence wholesalers and retailers at Ottawa were anxious to know when, where, and how the fund is to be expended. Indications that Ottawa is to witness a new era of building seem to grow brighter every day. One of the latest projects is that the erection of a mammoth victory memorial hall or auditorium in commemoration of Canada's dead.

Grant Davidson of James Davidson's Sons and Gordon C. Edwards of W. C. Edwards Company, recently visited New York.

Mr. Mayno Davis, head of McAuliffe Davis Lumber Company, was recently bereaved through the death of his uncle, Mr. Taft, prominent in American lumbering circles, who died at Boston.

Mr. P. C. Walker of Shepard and Morse, recently returned from Montreal and Toronto.

The Hawkesbury Lumber Company report their camps well established and operations going along satisfactorily. This Company will attempt to catch up with last season's log output.

Mr. Jack Belford formerly with Gilmour and Co., has experienced a good month since starting the lumbering brokerage business for himself with quarters in the Canada Life Building, Sparks Street, Ottawa.

Ottawa's "million dollar" victory loan team, captained by Mr. J. E. Frass, again won out in the Ottawa city race, and in its personnel were four prominent lumbermen, Grant Davidson, P. C. Walker, Mayno Davis, and Walter Ross of John R. Booth. This team again sustained its reputation of going over the top with more than a million dollars for the second year in succession. Mr. E. D. Hardy of the Canadian Lumbermen's Insurance Exchange, captained team 2.

Frank Hawkins, secretary of the Canadian Lumbermen's Association seems (judging by his voice) to be happy again. One reason for this is that the snow has come and he can lay aside for a time the strain and worry attendant to his duties in connection with the Lower Fire Protective Association. Next spring should see him back in harness again travelling faster than ever.

A central institute for research with fifty laboratories and costing upwards of \$500,000 may be located at or near Ottawa if a scheme of the Reconstruction and Development Committee, recently submitted, secures the approval of the Government.

It is interesting to shippers and buyers of lumber to note that starting with December 1st each year and continuing until April 30th that, on all flat or gondola cars, there is an extra allowance of five hundred pounds from track scale weights, to cover variation in the tare of such cars owing to absorption of moisture, accumulation of ice, snow, etc. Under the special tariff providing for this extra five hundred pounds from the weight of each flat carload, the weight of the auxiliary material such as racks, stakes, standards, strips and supports necessary to retain the load upon the cars is not included. The usual allowance is 1,000 pounds for stakes and fastenings, but from December 1st to April 30th, there is the extra five hundred pounds conceded for moisture, ice and snow. There is no change in the allowance of five hundred pounds on box or stock cars loaded with lumber or other rough products of the forest, which remains the same during the winter months. The winter schedule is, box cars, 500 pounds; flat cars, 1,500 pounds.

Inaugurate Wood Building Propaganda

Now is the time to promote sentiment for the frame house in France and Belgium, according to R. S. Whiting, Architectural Engineer of the National Lumber Manufacturers' Association. He points out that the people of that country for hundreds of years have lived in houses built of stone, and know nothing of the utility and beauty of the frame home as it is known in this country. Mr. Whiting declares he is doubtful as to whether the French and Belgians will go back to the stone houses and he sees a chance for lumbermen to inaugurate such a wood building propaganda that the people over there will learn to want the frame house. He also suggests that architects in the United States who are favorable of wood construction should immediately be put to work on the task of studying French and Belgian conditions. In order to devise the best frame home for them along lines that meet their own of what a home should be.

Extensive Addition Made to Tie Reserve

A deal has been completed whereby the Canadian Pacific Railway adds more than twenty square miles of timber to its tie reserve between the town of Yahk and the international boundary in British Columbia. The company already owned fifty square miles of this timber, but in order to develop it to advantage, it was necessary to acquire additional acreage which was held by the King Lumber Company of Cranbrook, of which Hon. J. H. King, Provincial Minister of Public Works in B. C., is the president. It is estimated that the timber in this tie reserve will scale close to half a billion feet.

Argument recently took place before the Supreme Court in Ottawa in the Shives Lumber Co. vs. Price Bros. & Co. It was an appeal from the judgment of the Court of King's Bench reversing the judgment of the Supreme Court, which had dismissed the respondent's action. Both appellant and respondent are holders of timber limit licenses from the Government of the Province of Quebec, being neighbors. The action of respondent is for the value of logs alleged to have been cut on their limit. The appellant denied that assertion, claiming that no line had been finally established between the two timber limits.

Montreal Lumber Association Meets

How Shippers Have Been Relieved From Paying Demurrage by Reason of Depletion in Staffs

P. D. Gordon, Montreal,
Re-elected President

Members of the Montreal Lumber Association held their annual meeting on December 2, at the Board of Trade offices. Mr. P. D. Gordon, president, in his report, stated that a number of important matters relating to the rail transportation of lumber had received attention during the year. The committee and representatives of the carriers held a conference on 22nd March last, regarding the railways' proposed new regulations as to stop-off and reshipping on lumber, carloads, for planing, tonguing, grooving, kiln-drying and saving in transit. The result was that there had been no discontinuance of the stop-over arrangement on lumber. The committee strongly objected to the proposal of the carriers to increase the stop-over charges on re-shipment to Canadian points

for domestic consumption (not for export) from 1 to 2 cents per 100 lbs., and no agreement was reached on this point. The carriers are still considering the matter and before making any change will submit their proposal to the committee for review.

After a reference to the advances in freight rates, the report stated that on the matter of a remission of demurrage owing to the influenza epidemic being brought to the attention of the Board of Railway Commissioners by a Montreal lumber merchant, the Board issued an order relieving shippers from the payment of demurrage for delays in the loading and unloading of cars of merchandise caused by reason of the depletion of the shippers' staff by influenza. The Board's order provides that applications for relief on the part of the shippers must be accompanied by either an affidavit or a declaration giving full information as to the number of men employed immediately previous to the epidemic, the number of men employed during the continuance thereof, and at the time failure to load or unload cars promptly took place, any special effort made by the shippers to release cars more speedily by taking on new men or drafting them over from other branches of the shipper's business, and what action the shipper took to stop further shipments to his plant during the continuance of the epidemic, or if no such action was taken, the shipper must show whether it was possible for him to have taken such action. In cases of claims for remittance of demurrage under the foregoing circumstances the shipper is not called upon to pay the demurrage charges until the amount for which he may be fairly held liable is finally established. This order will be found of considerable advantage to the lumber trade, owing to the large volume of their carload business.

During the year Messrs. Stewart F. Rutherford and J. S. Morrison were elected members of the association.

The election of officers resulted: President, Mr. P. D. Gordon; vice-president, Mr. Geo. Grier; treasurer, (re-elected) Mr. F. W. Cotter; directors, Messrs. Geo. C. Goodfellow, D. H. McLennan, Stewart E. Rutherford, W. A. Filion. Mr. Arthur H. Campbell was chosen as the association's candidate for re-election to the council of the Board of Trade for 1919.

Personal Paragraphs of Interest

F. Allinson Cattanaach, manager of J. D. McArthur's local branch, Lac du Bonnet, Man., died recently from pneumonia. The deceased was 35 years of age and had been with the McArthur Company for ten years. He was well known in the lumber trade and other business circles.

E. S. Glasgow returned recently to Regina, after doing military duty in the United States and has resumed his former position as manager of the Security Lumber Company.

Lieut. Percy M. Hall, who was a member of "I" Co., 107th Infantry, and was identified with the firm of Milne, Hall and Johns Co., Inc., Cincinnati, Ohio, hardwood manufacturers, was killed in action on September 28, at Le Catelet, France. Memorial cards have been received by a number of Canadian lumber firms announcing his death.

The many friends of J. P. Johnson, of J. P. Johnson & Son, wholesale lumbermen, Toronto, will sympathize with him in the death of his wife, which took place on December 9th. Mrs. Johnson passed

away at her late residence, 111 Howland Ave., Toronto, after a few days' illness from pneumonia. The funeral was attended by many representative lumbermen.

John M. Berry and Wm. Dake, of the Berry Lumber Company, New York, who are American selling agents for Terry & Gordon, spent a few days in Toronto recently on business, and called upon a number of members of the trade.

Lieut.-Col. Frank J. Carew, Officer Commanding No. 1 District, C. F. C., who is the son of John Carew, M. L. A., lumberman, of Lindsay, Ont., in a letter to the "Canada Lumberman" says that the quantities of material produced by the Forestry Corps in France have been something enormous and that the corps of No. 1 District has itself done more hand work than any other branch of the service. Everyone has worked full ten hours a day very constantly, and when material was urgently required, adds Col. Carew, "we operated Sundays and quarter time and often the mills ran two shifts night and day."

L. D. Barclay, and P. J. McCormack, of Toronto, Eastern representatives of the Canadian Western Lumber Co., Fraser Mills, B. C., left on a month's visit to the Coast.

J. E. Houseman, for many years on the staff of the Molsons Bank, has been appointed vice-president of the North American Pulp and Paper Company, and general manager of the chief subsidiaries, the Chicoutimi Pulp Co., the St. Lawrence Pulp and Lumber Co., and the Roberval and Saguenay Railway, with headquarters at Chicoutimi, Quebec.

C. O. Maus, representing the Hyde Lumber Co., South Bend, Indiana, was in Toronto recently calling upon the trade.

Norman T. Moore, of Lewis Thompson & Co., Inc., Philadelphia, importers and manufacturers of mahogany and veneers, was in Toronto and other cities recently on business.

George E. Chaffee, for six year city salesman with McLennan, McFeely & Co., Limited, has been appointed sales manager of Lumber Products, Limited, of New Westminster, B. C.

L. C. Telfer, whose father is the head of the Telfer Woodworking Company, Bridgewater, N. S., and for a number of years had been employed in the office of Sillicker & McMann, wholesale lumbermen, Halifax, N. S., died recently from an attack of influenza. Mr. Telfer was widely known in eastern lumber circles and his passing is greatly regretted.

Hon. G. G. King, head of the King Lumber Company, Chipman, N. B., recently returned from an extended trip throughout the western provinces, being absent several months. He went as far north as Skagway, Alaska, and thoroughly enjoyed his visit. When it is considered that Mr. King is 82 years of age his vigor and activity are all the more remarkable in covering a journey of many thousands of miles.

The Cutting of Wood by Indians

A point of considerable importance to the trade has arisen in the courts of Montreal, namely, whether the Indians have the right to cut wood in the forests, according to their immemorial custom. The case in which this question is concerned is one brought by the Ecclesiastics of the great Seminary of St. Sulpice, reputed to be the richest institution in Canada, and possessing rights granted by French monarchs in the olden days, against the Iroquois Indians, in regard to cutting wood in the Seigniorship of the Lake of Two Mountains. In a judgment rendered by District Magistrate Carrier, Grand Chief Joseph Gabriel Kenvatosel and Tribesman Stephen Etienne were condemned to pay a fine of five dollars each, with costs, for having cut wood in the Seminary's forests. In rendering the judgment, his Honor said that the Seminary were the owners, by express statute, of the land where the wood was cut, and this has already been upheld by all the courts, up to the Privy Council in England. He held, therefore, that the Indians had no right to cut wood on the property. It was announced on behalf of the tribe, that the decision would be appealed immediately.

Pays Tribute to Canadian Woodsmen

Addressing the Women's Club, in Toronto, on Impressions received on a Visit to the Canadian Forces Overseas, Sir Robert Falconer, president of Toronto University, said that there are some 13,000 Canadians employed in cutting down and drawing timber from the French forests for use in the war. Of this work almost 90 per cent. was done by Canadians. Sir Robert added that no trees were allowed to be touched except those marked by the French and the forest still remained a thing of beauty. The hope was expressed that these stalwart woodsmen would on their return act as missionaries in certain parts of Canada in arousing an appreciation of our forest wealth and impressing upon the populace the necessity of scientific management and conservation of our timber limits.

Wanted & For Sale

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 20 cents per agate line (14 agate lines make one inch). \$2.80 per inch, each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word, net. Cash must accompany the order. Minimum charge 50 cents.

Advertisements must be received not later than the 10th and 20th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 8-t.f.

Hemlock Wanted

Cuts of Hemlock—now sawn. Cash. Apply Box 809, Canada Lumberman, Toronto, Ont. 21-24

Hemlock Wanted

One block of Hemlock Wanted. Quote prices to Box 826, Canada Lumberman, Toronto, Ontario. 24

Wanted Hemlock

Block of Hemlock lumber wanted. Write The Elgie & Jarvis Company, Limited, 18 Toronto Street, Toronto. 24

Hardwood and Softwood Slabs Wanted

4 ft. Hardwood and Softwood Slabs and bundled edgings. Cash. Apply Box 808, Canada Lumberman, Toronto, Ont. 21-24

Hardwood Wanted

Hardwood planks suitable for Tool Handles. Ash, Maple and Hickory. Will contract for five years' supply.

Canada Foundries & Forgings, Ltd., 23-4 Welland, Ont.

Maple and Birch Wanted

We are open to buy for prompt delivery: 1½ in., 2 in., 2½ in., Maple and Birch, No. 2 Common and Better.

State lowest cash price with point of loading. Grade to be stated and guaranteed.

Box 825, Canada Lumberman, Toronto, Ont. 24-2

Business Chances

For Sale

Building and Machinery of good Sawmill, well equipped with steam feed, canter, loaders, etc.
If you want a good mill, address Box 762, Canada Lumberman, Toronto, Ont. 15-t.f.

Ships Knees

We are open to make contracts for delivery during winter and spring of all sizes Spruce and Juniper Knees, 5 inch to 12 inch.

For further particulars, apply,
Musgrave & Co., Ltd.,
Eastern Trust Building,
Halifax, N.S. 24-3

Wanted—Man with Small Saw Mill

to cut three million feet or more each year for five years. We put the logs to the mill, and pay saw bill each month. Location, Northern Ontario.

We own the timber, and might consider a partnership with the right man. Box 818, Canada Lumberman, Toronto, Ont. 23-24

Opportunity for Live Salesman

Having disposed of my sawmill am opening an office in Toronto to wholesale lumber and wish to get in touch with a live, energetic, experienced lumber salesman who understands buying from the mill and has had experience in selling in car lots to the trade in Toronto and Western Ontario. I will invest sufficient capital to carry the business. Profit to be divided after allowing for salary and expenses or would form a partnership with the right man. In first letter give full details of experience, also state age and religion. Must have excellent references. Strictly confidential. Box 815, Canada Lumberman, Toronto, Ont. 23-2

The Italian Lumber Market

Before the war Italy imported approximately \$35,000,000 worth of lumber annually, which represented about 85 per cent. of her total lumber requirements. It is estimated that she will now have to import two or three times the quantity taken in pre-war years (which amounted to approximately 1,250,000,000 board feet) to cope with industrial activities, building operations, and the reconstruction of her invaded provinces.

In 1913, Austria-Hungary supplied four-fifths of the quantity imported. This Austrian trade, however, was almost entirely in the hands of Italian firms who would either purchase forest areas in Austria-Hungary or buy certain productions outright from year to year, or else acquire for a certain period of time the total quantity of logs and planks cut and sawn in specified districts. It is anticipated that in future, owing to the racial antipathy aroused by the war, Austria will endeavor to keep her limited trade with Italy entirely in her own hands. However that may be, Italy is now looking for other

sources of supply, and it is more than likely that she will look with greater favor upon the trade advances of her late allies-in-arms than upon those of her old enemy.

Trade Commissioner W. McL. Clarke estimates that Italy will have to spend abroad six times the amount expended during the five years immediately preceding the war, and that this amount will approximate \$200,000,000. The lumbermen of British Columbia should get their share of this trade.

Canadian Trading Company's Mill at Sewell

The Canadian Trading Co., Ltd., has been operating a mill at Sewell, Masset Inlet, for about a year, manufacturing and selling lumber to the Imperial Munitions Board. This mill was one of the original sources through which the Board got its aeroplane material from British Columbia, which was at first manufactured from logs bought from private operators. Of course, the department of aeronautical supplies of the Imperial Munitions Board, through Major Taylor, controls all local logging for war purposes, and the mill therefore obtains its logs now from the department, to whom it sells the lumber back.

Manager Stripp figured that his company had supplied the Imperial Munitions Board with more aeroplane lumber than any other mill in the British Empire. He added that there was more good aeroplane spruce at Masset Inlet than elsewhere under the British flag, and that while there was a large supply in the States the quality of the Queen Charlotte timber was distinctly superior to that of the more abundant timber growing to the south of the line. He had no hesitation in saying that the government gave everybody connected with the industry a square deal. While they might not have encouraged big profits, the prices paid allowed a very reasonable margin to competent operators. He could see no kick coming from anyone in this connection. There was, of course, a large accumulation of side lumber which could not be profitably disposed of at present; but it would find a market in due course. In fact, there seemed no reason why all the merchantable spruce growing in British Columbia could not be satisfactorily sold. There was plenty of it in the province, but not an over-supply.

Mr. Stripp was asked if he saw a future in the aeroplane manufacturing industry. "Certainly," he replied. "Aircraft is going to find a commercial use after the war. Of course," he added, with a laugh, "the machines built will last longer with nobody shooting at them, and so perhaps we can't count on an unlimited output, as at present."

The Canadian Trading Company's mill was used to test out

logging comparatively with ordinary logging methods. Mr. Stripp understood that, as a consequence, logging operations had been discontinued entirely. If any outfits were still working he thought they were probably engaged solely in getting out the rived timber still in the woods.

Another Advocate of Organization

In a recent interview Angus E. Munn, president of the B. C. Loggers' Association, said:

"Of course, we hardly know where we are at just now, but we are figuring that there will be a large demand for reconstruction material. I imagine a good many of these camps which are now cutting aeroplane spruce will take contracts to cut material for the pulp mills. They are opening up again now and they use a large quantity of timber."

"I am optimistic as to the future. The lumber mills of this province ought to be looking for export orders. We have the best timber here and it will be large orders that will be given in connection with the reconstruction of Europe. Our mills should be in the market for them, not each paddling his own canoe, but, by an organization, seeking the trade for distribution, among themselves."

Logging Camp Sanitation

Letters have appeared in the press lately complaining of insanitary conditions at some of the logging camps of British Columbia. The Vancouver Daily Province took the matter up editorially on November 4th, writing in part as follows:

"This trouble occurred in logging camps before the interior of British Columbia began to be the scene of lumbering operations. It was frequent in Ontario until the government of that province adopted drastic measures and saw that they were carried out. But even in Ontario there are instances in the remote districts where there is a tendency on the part of owners to neglect their camps and to allow them to get into an insanitary condition. In the comparatively few camps in Alberta things are better, for one reason because of the Royal Northwest Mounted Police, who pay periodical visits and see that things are shipshape. There seems to be no reason why lumber camps in British Columbia should not compare favorably with the camps of Washington, U.S.A. That they do not by any means do this is well known to those who are acquainted with the methods in use in that neighboring state. The alleged insanitary state of the lumber camps existed long before the epidemic now sweeping over us was heard of. But it is exceedingly undesirable that filthy and insanitary conditions should be allowed.

Interesting Insurance Case

The writ in an interesting action was filed on October 25th by Farris & Emerson, acting on behalf of the Pearson Shingle Mill Co., Vancouver. It appears that at about 4 o'clock on the afternoon of May 14th a representative of the plaintiff company took out a policy with the local agents of the defendants covering the company's mill on Burrard Inlet. The usual covering note was given to protect the insured property until the arrival of the policy. At about the very hour that the policy was taken out in Vancouver a fire occurred at the company's mill at Burrard Bay, doing considerable damage. The defendant company disputes payment on the ground that it is not proven that the fire had not started before the moment when the covering note was given. The plaintiffs contend that under the usual rule of law the covering note, protecting the insured from May 14th, must be taken to give protection from the hour of noon of that day.

Review of Current Trade Conditions

Ontario and the East.

There is not much of special moment in the general situation, so far as Ontario is concerned. Business is rather quiet in all lines and there is only a moderate amount of stuff moving for general repairs and the completion of some new buildings which were started in the fall. The trade, however, looks for a very active structural season in 1919, and everything points to the fact that business will be better with both the manufacturer, the wholesaler and the retail lumberman than it possibly has at any time since the outbreak of the war. Dealers are not buying much at present as they prefer to adopt a conservative attitude and not start the first of the year with too heavy stocks. Inventories are now being taken and everything put in shape for the activity which, it is expected, will manifest itself within the next two or three months. In regard to lower prices on certain lines of lumber, there is basically nothing to warrant such a hope as the demand is expected to be unprecedented while the supply is considerably smaller than normal.

All the factors, which enter into the production of lumber for the coming season are virtually the same as prevailed during the one just closed, only that wages are slightly higher and the cost of getting out the timber, due to the heavy outlay for supplies, which is from 15 to 20 per cent. additional. Now and then there is expressed an opinion that lumber prices may be reduced, but in interviews obtained from representative firms in various parts of Canada there has not been a single declaration that would lead the onlooker to expect any diminution in price before next fall at any rate. Whether there will be a slight drop then depends upon the foreign market, the availability of bottoms, the establishment of credit and the facilities with which foreign trade is developed. It is idle at this moment to pronounce authoritatively what volume the European demand will reach, but the consensus of opinion is that Canada will be called upon to furnish all the timber that she can possibly supply and possibly more. The Canadian Lumbermen's Association has not been slow in taking aggressive action and will act in conjunction with the Provincial and Federal Governments and the Canadian Mission in London in seeing that everything is done to keep the timber interests of the Dominion to the forefront. Many favorable inquiries are being received.

Just now the chief topics of conversation in the trade are those of price and supply. Prediction is made in some quarters that before two months are over white pine and hemlock will see an advance of 5 per cent., while others are equally firm that the ascent will be not less than 10 per cent. The War Trade Board is devoting more attention than ever to the matter of lumber supplies and will act in close co-operation with the industry. There is no necessity or justification for sacrificing stocks on the Canadian market as the allied countries are greatly in need of lumber and there is the replacement value which must be considered. The British Government recently purchased 4,000,000 feet of clear fir in British Columbia and enquiries are now being made for 670,000,000 feet of material for house construction mostly small timbers, boards and dimension. It is also said that commissioners from other countries are visiting the Dominion for the purpose of buying a considerable quantity of stock. At the present juncture there may be a temporary easing up in spruce, but hemlock and white pine are holding firm. Those who have large stocks—and, by the way they are not so many as usual at this period—are retaining them fully confident that, with the active readjustment programme ahead, the various house building plans, factory extensions and wood-working operations, the new impetus given to various lines of industry, such as furniture, trucks, farm implements, pianos, gramophones and automobiles, by reason of the close of war, will result in everything being taken up in the next few months at present prices or perhaps an advance.

Transportation is now much freer than for several months past. Embargoes, permits and other vexatious regulations have been eliminated. Nearly every lumberman that one meets expresses the belief that there is "great business ahead" and that "some nice orders will result early in the new year." Of course, things may not pick up quite as rapidly as the most optimistic hope, but there is no reason to believe that there will be any fall in values or any demoralizing factors in the trade. The disorganization and displacement of four years of war cannot be overcome and realized in a few weeks, but with patience, courage and cheerfulness, the lumberman is likely to come out of the period of transition and make the grade to normal conditions with perhaps less disturbance and uncertainty than most any other branch of industrial endeavor.

The Eastern Provinces are most optimistic and a great revival is being shown in the spruce situation. The promise of early and continued shipments and the certainty of a short supply this coming season are developing a spirit of satisfaction in the spruce country.

Unmistakable evidences that prosperous conditions will prevail in the lumber business at an early date are indicated by several outstanding features.

One is that the British Munitions Board has recently purchased 10,000,000 feet of spruce deals at \$36 and \$37 in St. John, which leaves only a comparatively small quantity of spruce on the docks.

Another indication is that certain banks are urging wholesalers not to sacrifice on their pro forma invoices, but to take them up and the necessary advances will be made. This demonstrates that the financial institutions have faith in the present market values of lumber.

Another omen is that the Committee recently appointed by the Minister of Reconstruction in Great Britain declares that 100,000 standards a month of softwood will be required during the first year after the war for rebuilding purposes. This virtually means 200,000,000 feet a month and, as a large quantity of white pine and spruce will be needed, Canada should be in the forefront in capturing a fair proportion of this heavy amount of business.

United States.

Generally speaking in the retail lumber yards business is quiet and there is little buying going on at present except for immediate use. One eastern firm writing the "Canada Lumberman" states that they find the feeling is that lumber must drop some in price before much building will be undertaken. Wholesalers, however, maintain that prices are strong and will remain so for at least six months or longer, providing the export business that is confidently looked for, develops. Of course if there is no large outlet for foreign lumber by reason of lack of ocean tonnage, there may be some decrease in values, but at the present time it appears as if the shipping situation will be favorable and that European requisitions would be quite as large as expected. The maintaining, elevating or reducing the values of lumber devolves a good deal around labor conditions and costs. There is no immediate prospect that labor will come down in figure, as living conditions are better to-day than ever in the laboring classes and the cost of all supplies is high. If wages decline they must do so hand in hand with everything else and until wages fall lumber cannot take a drop. The sooner the prospective builder realizes this the better, and it is pointed out that this new order of things will show him that lumber is cheap now compared with his enhanced earnings and will get no cheaper until his own earnings decrease. The spirit of hesitancy that dominated the hardwood market immediately following the signing of the armistice is fast disappearing and is being replaced by an optimism that is giving rise to a good volume of inquiries and orders. Domestic demand, although regulated by the seasonable lull in general activities, is gradually taking up the slack of Government cancellations. Business from construction sources can not be expected in volume before the approach of the spring building season, but industrial demand is counted on as the sustaining factor in the meanwhile. Furniture, vehicle and farm implement manufacturers are rapidly adjusting themselves to a normal production and furnish a growing volume of business. Under the conditions, practically every hardwood man is satisfied with the present, having faith in the future to produce greater prosperity. Unparalleled demand for furniture, pleasure cars and motor trucks is expected during the next year; the railroads are looked to for big business in lumber for general construction, and box and barrel manufacturers are expected to remain active and to contribute heavily to the general volume of demand. Besides this are awaited the tremendous revival in building operations and, last but not least, an extraordinary heavy movement of hardwood lumber and forest products to Europe and other foreign countries as soon as transportation facilities become available. So there is no reason for anything but the most pronounced optimism. In the meanwhile, prices are reported a little easier, but with no tendency to weaken; and it is felt that a stronger tone will make itself manifest as soon as the holidays are over, when a considerably heavier demand is expected.

A pronounced strengthening of the southern pine market manifests itself already. The slacking up and general cancellation of Government emergency business have been followed by a great increase in the number of inquiries circulated, from both yard and industrial sources, and a more vigorous demand for commercial stock from lumber dealers in all sections of the country is reported from various parts

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

of the southern pine belt. A spirit of exultant optimism prevails in every branch of the trade, sustained by these indications that business is going to boom, as soon as the building season approaches, as it never has boomed before. Most sections also report that production conditions are improving, with the labor situation decidedly better, although costs, of course, remain high.

Great Britain

The report of the committee appointed by the Minister of Reconstruction on the position of the house-building industry in regard to timber makes a recommendation that immediate steps should be taken by the Government for the importation of at least 100,000 standards a month of softwoods during the first year after the war. This, of course, is only a recommendation, but the housing question is one of the attractive items on the programmes of all political parties, and, in spite of the claims of other trades for tonnage, the Government will have to ensure that priority is given to a large import of wood in 1919.

The problem of readjustment is coming to the front and much interest is being taken in the position that Canada will be in in the matter of catering to the timber requirements of the United Kingdom. To find oneself freed from the cloud of militarism is in itself a great emancipation from the existing worries; but for all those who have fought to keep their business going during the strenuous period of the war, it is only right that they should look forward to an early resumption of the shipping conditions as a just reward for their patience and perseverance. Doubtless some time must elapse before the trade and commerce of the country can return to its normal course. There are many obstacles in the way, and until the army has been demolished, there will still be a great scarcity of labor. Meanwhile, the shipping accommodation, freed by the exigencies of the war, will be fully employed in bringing forward foodstuffs to replete the scanty larders of both at home and the Continent, so that all can only look forward in happy anticipation of seeing the timber trade liberated from the enthrallment of the Controller when the mists of the war have rolled away.

The chief cause for joy is that the war is actually over, and although it may take some months before affairs resume their normal course, yet business will begin to revive little by little until eventually it has regained its former state. While trade is progressing towards greater activity month by month, all can look forward to a bright and prosperous future.

The report of the committee appointed by the Minister of Reconstruction to consider the position of the building industry after the war refers to the suggestion which has been made in some quarters that 300,000 houses may be built in England and Wales in the first year after the war. That number of houses, the committee explain, would require 6,000,000,000 bricks, which is 50 per cent. more than may be expected to be produced annually even if the existing works are made to produce to their utmost capacity. They also remark that it appears impossible to secure production of bricks to meet the probable demand, at least, during the first two years after the war. This conclusion as to bricks, they say, is equally borne out with regard to certain other essential building materials. The supply of timber has given the committee much anxiety. They are advised that the stock of imported soft wood in Great Britain at the end of 1918 will be about two months' consumption. It is emphasized as essential to take immediate steps to secure this country's proportion of the present available supply, and to secure an ever-increasing supply. Having assured themselves that sufficient material will not be available adequately to meet the demand, pending an increased production of those essential materials which may be insufficient, the committee are satisfied that a certain measure of control and regulation will be requisite. They are satisfied, however, that the production of materials is capable of considerable increase at an early date after the war. The committee set out the general lines on which they think the increase in production of building materials can be best advanced, such as priority of release upon demobilization, introduction of more modern appliances, increased use of machinery, possibly under certain circumstances financial assistance by the State in extensions and equipment of works, closer co-operation between employers and employees, and standardization of fittings in all trades, especially for cottages, so that manufacture might proceed without delay.

Market Correspondence

**SPECIAL REPORTS
ON CONDITIONS AT
HOME AND ABROAD**

Ottawa Expects No Drop in Prices

Though little trading or buying was done in the Ottawa lumber market during the opening period of December, prices continued to hold firm and reports from well informed quarters of the trade indicated that there was not going to be any drop in prices.

The usual December and holiday lull began to creep in around the fifth of the month. Consequently lumbermen did not look for any great volume of business being done until the Christmas and New Year's season were over.

Shipments of lumber during the first part of December continued to be numerous. The stock in most cases was purchased months ago and was awaiting shipment and delivery. New business and domestic and foreign orders did not show much change as compared with the preceding two weeks.

The principal demand, if such it could be called, came from the United States and ranged all the way from mill culls to the better grades of white pine. The spruce grades were not active. Lath and shingle were slow. The building grades beyond a few local orders showed no activity. The outlook toward the English and European market remained unchanged.

While the lumbermen themselves were not busy filling orders, and everything on the surface was reported "quiet," there was a good deal of thinking going on. Speculation as to what might or might not occur when the European market opened up was indulged in. Besides a good deal of thought was given to dopeing out what would happen with the expected renewal of building operations in the spring. So many different problems as to what might or might not occur presented themselves that the lumbermen on the whole did not care to express any concrete opinion until they had had time to fully digest the situation.

From the reports to the "Canada Lumberman" there is one thing sure and certain, and it is that the manufacturers holding big blocks of stocks produced at high prices are not going to cut prices or undersell in comparison with productive cost.

In other words any stocks there are, are going to be carried over, with a possible exception of some of the little fellows who for financial reasons desire to realize on their holdings now. The amount that

will come into the market this way will, it was taken, not be nearly sufficient to cause or warrant any general decline in price.

What set some of the wholesalers and brokers thinking was the report that the manufacturers were going to ask from seven to nine dollars per M. for the 1919 cut as compared with the 1918 output. "I can't see how they can do it. If they get five dollars above last season's price they are getting the limit," said one of the brokers.

On the other hand the big manufacturers appeared to be perfectly willing to keep what stocks they possessed and expressed confidence for the future. Their line of argument was that if their judgment prove wrong they stood to lose, and if it was right they are only getting what they feel they are entitled to receive. They point out that the stocks they have for sale were produced at high cost, and consequently they cannot be expected to sell them for the same figure or less than it cost to produce them.

The whole tone of the market as regarding sales from manufacturers to brokers and wholesalers seemed to be that the high cost of production charges was going to "carry on" for several more months at least. Ottawa manufacturers had very little if any stock to sell. There was no over supply. Neither was there a shortage for present demands.

In discussing the situation several prospective purchasers tended toward the view that their position at present was doubtful. Wholesalers generally do not care to go into the market at this time and pay what the manufacturers are reported to be asking for the 1919 cut. On the other hand, if they do not get the stock and a big demand crops up next spring and summer, what are they going to do? Boiled down, the issue seems to be, take a risk or sacrifice prospective profits.

The outlook indicated that there would be considerable "jockeying" for certain stocks before the sawmills get under way again. One Ottawa firm reported it had heard the New Brunswick dealers had boosted the price of spruce \$5 per M, effective December 1st. If this report is true there does not seem a great deal of chance of the spruce market coming down in price though it may remain practically inactive for a time.

An opposite view taken of the situation was that spruce was

Meal Time is Klim Time

There is hardly a dish that goes on the camp table that could not be improved in flavor and nutritive value by the addition of Klim. No other form of milk that you can economically transport can be drunk and enjoyed because of its flavor.

Klim retains all the food solids of Milk except the fat. Your men get plenty of fat in butter and in bacon and other meats at less cost. They do not need it in the milk they use.

Whipped into water Klim makes a satisfying, natural flavored drink that will be relished. Mixed dry with flour, sugar, etc, in baking and cooking, it adds food value and flavor much in excess of its cost.

Buy Klim with other grocery supplies. Specify the 10 lb. size, it is the most economical.

Klim is genuine—the flavor proves it—Drink it.

Canada Food Control—Blanket No. 165

going to come down in price, and in support of his view the dealer in question gave the "Canada Lumberman" the following figures of sales made during the first week of the month: 7 in. dressed, delivered at Ottawa, \$38; 3 x 7, delivered Ottawa, \$37.50; 2 x 6, delivered Ottawa, \$37.50; 3 x 4, delivered Ottawa, \$37.

The pine market held firm. Dealers inclined toward the pine grades argue that with the European demand opening up that three inch spruce will be in demand, but that the English market does not want one in. spruce, whereas the buyers will accept one inch pine. Thus the idea was that one inch and one and quarter in. spruce will be in practically no demand. As against this it is again argued that one-inch pine and upwards to one and one-half inch will be in requisition in Canada for building purposes.

Take it this way," said a dealer, "when reconstruction sets in, is the contractor or the man who contemplates building houses going to go into the spruce market with the prices as high as they are? Will he not take a look at hemlock first? Supposing he does and the mercial purposes, which is he going to buy? Hemlock, of course, mercial purposes, which is he going to buy? Hemlock, of course. Then where is your spruce coming in?"

The labor situation in the woods showed a considerable improvement. It was estimated early in December at Ottawa that ten thousand more men could have been used in the woods during the first part of December had they been available then. For some reason or other there seemed on the part of some workers in munition factories formerly earning from seven to nine dollars per day, a reluctance to go into the woods and undertake attendant hardships at a lessened salary. Some of these workers apparently have a fat stake laid away and with the incoming of the holiday period seemed to live free and easy and celebrate a peaceful Christmas for once.

The outlook for factory labor caused no concern. The prospect for enough business to keep Ottawa woodworking plants and factories appears blue enough when the holiday season ends. Most of the plants had enough work ahead to ensure operation to the end of the month, but didn't know of much beyond it.

Big Spruce Business at Good Prices in St. John

All the mills at St. John have finished their season's cut of logs, being forced to shut down earlier this year than usual, as the men left the mills going to work on the winterport steamers.

A feeling of optimism has struck the St. John market in so far as St. John stocks of deals are concerned. This feeling looks as if it had a very solid foundation and was not a feeling only, as during the past week the British Munitions Board have come onto the market and purchased upwards of ten million feet of deals at or around \$36 to \$37 per M. on the sellers mill wharf. St. John shipments on this sale are now taking place, while the quantity does not seem large, it will leave only about 25,000,000 feet of city cut deals yet unsold. It certainly looks as if the holders of these deals will have no trouble to dispose of them at good fair profitable prices. While the prices may seem larger than in former years, still the cost of logging, driving manufacturing and general overheads have been very much higher than in 1917 and the margin of profit is only a fair one. It certainly looks as if the mill wharves at St. John will be sold clean off and all lumber removed by spring. It also appears more certain to-day that less logs will be cut and put in streams than was the case in 1917-18, and the advance over 1917-18 prices will run around 25 to 30 per cent. for the sawn timber. Not as many portable or country mill cuts are being produced in New Brunswick as was the case in 1917-18. Men for woods work are more plentiful at the present than they were earlier in the season.

Local business is not as good from a factory standpoint as it was a month ago, although the outlook for 1919 is fair. Stocks of matched spruce boards and flooring are very light, spruce boards being very scarce and commanding big prices. Refuse stocks are quite sufficient to take care of all the business offering and no shortage will take place before the new stock comes on the market.

The box shook trade still continues good and prices are as firm as ever.

Montreal Looks for Encouraging Business

So far as Montreal trade is concerned the position has not undergone any material change. Business is dull in practically every section. Wholesalers and retailers are still awaiting developments, which are not likely to show any pronounced tendency until the spring. At present they are in the dark as to even the likely trend of events, although there is a pronounced feeling that Canada is on the eve of a distinct revival in commerce. The transition period, however, is apt to be discouraging, but one cannot reasonably expect that the war, with its abnormal demands, will be terminated without creating a certain amount of business uncertainty. The current of trade is upset in some directions, and it will take time to readjust things.

The lumber business is feeling the effects of this condition, and

would be buyers are holding off until they can see a little more daylight on the situation.

Wholesalers are receiving offers of large quantities of stock, and here and there concessions are offered for immediate purchases. In other instances, however, quotations are higher. Despite the lack of orders, prices hold generally firm, although, as stated, now and again reductions are offered.

Both local and American business is slow. For the month of November Montreal permits totalled \$339,475, an increase of \$120,120 on the corresponding month last year. During the 11 months the value was \$4,706,828, a gain of \$407,775, a far better showing than at one time seemed likely. It is yet too early to say whether any of the many contemplated buildings held over during the war will be commenced in the spring. The idea among contractors is that there will have to be a substantial reduction in costs before any real improvement in the trade will be shown. Already in some directions the labor cost is lower and there is also a slight drop in values of certain materials.

It is reported that the British Government has closed several contracts for the spruce required and referred to in our last issue. The business is stated to have gone to Quebec and the Lower Provinces.

Although not absolutely relative to the lumber trade, it is of interest to note that the South African Government is in the market for many thousand freight cars and a number of locomotives. The inquiry has come to Canada; if the car order should be placed here, it would mean a certain amount of trade for the lumber section.

Mr. Horning Joins Beck Lumber Co.

The Beck Lumber Company has been formed with headquarters in Penetang and will sell the output of the C. Beck Mfg. Company. Among those interested in the new organization are W. F. Beck, G. A. Beck, A. E. Beck and F. H. Horning. Mr. Horning will be in charge of sales and will look after the marketing of the products in Ontario, New York and other States. For the past four years he has been associated with the C. G. Anderson Lumber Company, Toronto, and is leaving at the end of the present month to enter upon his new duties. He has been engaged in the lumber business all his life, starting in as tally boy with H. M. Tyler Lumber Company, Tonawanda, N. Y., in 1892, and four years later he took a position on the road. Subsequently he joined J. P. MacKenzie of Tonawanda, and was with him until nine years ago, when he was appointed lumber buyer for A. Wyckoff and Son Company, Elmira, N. Y., manufacturers of wooden water pipe and steam pipe casing. As Canadian pine is largely used in these products Mr. Horning had extensive business relations with various Ontario firms with whom he established a strong connection. In 1914 he became identified with Mr. Anderson, and has devoted special attention to white pine and other soft woods. The C. Beck Mfg. Company turn out red and white pine, spruce and lath at their mills and have also facilities for dressing in transit and resawing. They operate a large planing mill and manufacture boxes, box shooks, wooden pails and tubs, as well as shingles, lath, posts and timber. The Toronto office will be at 10 Parliament St.

Aggressive Concern Gets After Export Trade

Frank Kent, of the Seaman, Kent Company Ltd., Meaford, Ont., spent a few days in Toronto this week on business. A past president of the Meaford Board of Trade, he has been re-elected a member of the Council of that body and delivered a stirring address at the recent annual gathering. The Board has undertaken to grapple with the problems of reconstruction and is an aggressive organization. Mr. Kent read a number of letters from English firms, asking information with regard to the output of various allied industries of the lumber trade. In association with other concerns the Seaman, Kent Company intend despatching a man to France and Belgium within a short time in order to get after the export business in hardwood lumber and flooring and follow up actively numerous foreign enquiries that have already been received. It is probable that Mr. Kent himself will go overseas in the near future to renew negotiations with British firms with whom they did a large business previous to the outbreak of the war. A number of encouraging communications had come to hand and instead of waiting for associations and other bodies to move the Seaman, Kent Company are acting without any loss of time. It is understood that the head office of the Company will shortly be removed from Meaford to Toronto.

Capt. Thomas German has just commenced work in his yard at Meteghan, N.S., on another three-masted schooner for Mr. J. E. Gaskill, of Grand Manan. The vessel will be about 375 tons and will be constructed along similar lines as the several which Mr. Gaskill has built on the St. Mary's shore.

Big Log Drives on the Ottawa are Passing

Thousands of Dollars Worth of Timber Lies on Bottom of River—How Many Residents Secure Free Firewood—Sunken Logs Preserved

Generations of Canadians on the banks of the Ottawa, above the Chaudiere, have seen the logs come down every summer to lie in the great boom in the deep, smooth current below the Rapids Des Chenes to wait their turn and their summons to the mill. For one old man's long life they have been feeding the insatiable saws in the mills at the Chaudiere. And well nigh a score of other mills centering on the city of Ottawa, this lumber metropolis of Eastern Canada, has helped to eat them up—these great pine and hemlock trunks, and those straight, round spruce. Further and further back have the forests receded from whence the logs for these hungry mills were cut, says S. H. Howard, in the "Star Weekly." Away above Mattawa, then Temiscamingue, at the headwaters of the Coulogne, and the Petawawa the lumberjacks have culled first, as square timber—the primeval wilderness white pine—then the red pine, then the smaller pine, and the hemlock, spruce, and balsam. And now they are taking everything—straight or crooked, round or "shaky," clear or knotted. Even the young trees, no bigger than flag poles—the pulp mills gobble them all, for paper is high and growing higher, and the market for newsprint growing faster than the trees.

Away up the river, where it arises in the Quebec wilderness, lumberjacks cut trees to make logs for these great mills at the Ottawa. Away up on the height of land which divides the watershed of the Ottawa from that of the Georgian Bay, men work all winter from before the dawn until after dark to feed these great mills on the Chaudiere. Booth's logs, they say, are traveling in the rivers and lakes for two years before they reach his mill. Recently he has found it cheaper to build railways right into his limits and to haul some of his more distant cut right out of the woods on flat cars, from which, two days later, they are dumped into the river at the mill. Two days' as contrasted with two years! But some of the limits are not accessible to railways, and the Ottawa is still one of the great lumber streams of Canada, as it has been for well on to a hundred years.

The Way that Fuel is Coralled

Like a flock of buzzards, the wood pickers swoop out from the points and bays of the Ontario shore. With a pike pole thrusting over the bow like a long, sharp beak, each boat has a man at the oars and another steering with a paddle in the stern. Flat-bottomed dories, these boats, built with pointed stems and square sterns, the bottoms curving up out of the water two or three inches at the bows, that they may ride over boom-timbers—with an extra jerk of the oars—and steer more easily in the current. Out among the floating logs the fleet of the wood-pickers spreads, each seeking and attacking its own prey in an eager hurry to catch a load before the drive drifts down and tightens in the sorting-gap jam.

In among the drifting timber the little pointed boats scatter, and now the man in the stern lays down his paddle, and the oarsman passes him the long pike pole, shod at the end with a steel point and a hook. With a dexterous drive he spears a broken log, tows it towards the boat and swings it aboard like a great fish. Half a pine stick, twelve inches through, it may be, and perhaps so heavy it takes two men to lift it aboard, or perhaps again it is too heavy to lift out of the water at all, and it is snubbed with a rope and towed behind. Driftwood, cedar stumps, old beams, planks, poles, splintered and broken saw-logs that have suffered innumerable jams and innumerable waterfalls are all fair game for the wood-pickers, and they load up as much as their staunch, handy little craft will carry, and come heavily home again. In the wooded coves and bays of the Ontario shore where the summer camps and cottages lurk in the trees, each house has its cord-wood pile of river-furnished firewood piled high and dry to season for the cook stove.

The Law of Ownership of Logs

Every saw log dumped into the river for the lumber companies is bark-branded with an axe, hammer-clouted with the owner's initial letter on the sawed-end. While those brands remain the law of property holds rigid. But if the log is broken, cracked, or damaged so that the brand is no longer in evidence, who sees it first and grabs it fast has rightful claim. In a journey of perhaps many months and, it may be hundreds of miles, a saw log endures and survives many vicissitudes. Thousands of them never reach the mill. They are notched, sawn, trimmed, skidded, scaled, hauled, dumped at the river, and driven by the hardy drivers perhaps for hundreds of miles; towed

for long, slow stretches by panting "alligators" and steamboats, only to drift ashore and be neglected for years.

The Ottawa Sweep comes along at intervals and rolls such strays off the beaches and rocky ledges and sends them on about their business. But perhaps in the falls at the Chats or some other wild tumble of the river they fall crossways of a rock and break or stub one end against a boulder and jam with a hundred others on top. The key log is broken, chopped or dynamited. Perhaps they lie in an eddy, or a swampy bay so long they get water-logged and sink. Hundreds and thousands of dollars worth of timber lies in the bottom of the Ottawa. Thousands of these "dead-heads" are seen floating every summer, one end bobbing up and down at the surface, the other touching the bottom, waiting such time as the "sweep" shall have time to buoy them up to a high-floating log with a piece of wire, or until they absorb just sufficient more water to gently sink from sight and lie in the mud. Some day when timber is even more valuable than it is now companies will be formed to salvage these old, water-logged dead-heads from the bottom of the Ottawa.

Air But Not Water Decays Timber

For contrary to popular impression, water does not rot wood; air does that. Water preserves wood. Spear one of these old logs lying in the bottom of the clear, brown water. A very little help will suffice sometimes to raise them to the surface, when they can be roped and towed ashore. Cut one through with a saw and the wet, sweet pine wood is as sound as a dollar right through to the core. The same log lying in the woods would long since have crumbled away.

The big days of the Ottawa as a lumber river are passing. A great part of the Ottawa sweep consists of "pulp" spruce logs of all sizes down to flag poles. And this summer for some reason, whether because of the war or the dwindling of the forests of the Ottawa Valley system—the number of logs coming down Des Chenes to the sorting gap is less than ever remembered. Only one boat is engaged on the Lac Des Chenes tow, whereas last year and for time immemorial there has never been less than two. But the old Ottawa booms, with their great, low-lying boom-sticks—trunks of the old days, such as are seldom found now—are still there, ready as of old for all the logs that come, coupled with heavy chains and snubbed to the crib piers in a long parallel avenue in the centre of the mile-wide river.

Moving Pictures of Shipbuilding in Canada

The Exhibits and Publicity Bureau of the Commercial Intelligence Branch has taken a number of moving pictures of shipbuilding in Canada. Mr. B. E. Norrish and Mr. Arthuh Reeves went to British Columbia for this purpose and took moving pictures of wooden shipbuilding from the taking out of the logs to the launching of the ship. The launching of a ship built at Port Arthur was also photographed. Films were secured of the building of steel ships at the Canadian Vickers plant in Montreal with the launching of the War Joy, one of the steel ships built there. These moving pictures are so real that those looking at them can see the building operations as clearly as if they were actually visiting the scene of operations.

All these moving pictures, as well as many others, representing Canadian industrial activities from the Atlantic to the Pacific are to be shown abroad in every country where Canada has trade commissioners. The Commercial Intelligence Branch has already arranged for the exhibition of a number of moving pictures of Canada in Australia, South Africa and the United Kingdom. Arrangements are being made for the translation of the titles into Russian and other languages. One of the features of the campaign which the Commercial Intelligence Branch of the Department of Trade and Commerce is undertaking in Siberia is the exhibition of moving pictures of Canada.

A large, new wooden tern schooner was launched at Port Daniel, Province of Quebec, on November 21. This vessel measures 149 tons net, and was built of birch and spruce, for Colin C. Tyrer of Halifax and Charles H. Nadeau of Port Daniel. This is the first ship built in Port Daniel for years and opens up this new and important industry.

The McKenzie Shipbuilding Company, St. John, N.B., will lay the keel for a ship similar to a four-masted one which they have just launched.

Sale of Saw Mill Timber and Farm Lands

Tenders will be received at the Head Office, Henry Wise Estate, St. Catharines, Ont., until Dec. 30th, 1918, for the sale of the following Timber and Farm Lands, also Saw Mill, lying at and in the near vicinity of the Village of Craighurst, County of Simcoe, at the convergence of the Townships of Medonte, Flos, Oro and Vespra.

TOWNSHIP OF FLOS (approximate)

- Lot 42, Con. 2, 100 acres, 95 of timber.
- Lot 42, Con. 1, 100 acres, 70 acres cleared and under cultivation, new barn, silo and house.
- Lot 43, Con. 2, 100 acres, 30 of timber.
- Lot 44, Con. 2, 100 acres, 25 of timber.
- Lot 46, Con. 1, 100 acres, 30 of timber, 70 of wood.
- Lot 47, Con. 1, 100 acres, 30 of timber, 70 of wood.
- Lot 41, Con. 1, Village Lot with Boarding House.

TOWNSHIP OF ORO

- Part of Lot 37
- Part of Lot 38 300 acres, 200 of timber.
- Part of Lot 39
- Lot 5, Con. 4, 60 acres, 30 of wood.

TOWNSHIP OF VESPRE

- Lot 35, Con. 2, 100 acres, 10 of timber.

TOWNSHIP OF MEDONTE

- Part of Lot 11, Con. 6, 125 acres.
- Lot 51, Con. 1, 100 acres, 20 of timber.

MILL, CIRCULAR (Capacity)

- Hardwood, 25 M.
- Hemlock or Pine, 50 M.
- Two 85 H.P. Boilers.
- Steam fed, automatic saw sharpener, completely outfitted with all necessary equipment to begin operations.
- Highest nor any tender not necessarily accepted.

Henry Wise Estate
St Catharines, Ont.

\$149,000,000 Invested in Canadian Lumber

Spruce Leads in the Output While White Pine and Douglas Fir Come Next in Production

A census of the lumber industry in Canada has been completed by the Dominion Bureau of Statistics. The census embraces the returns of 2,879 operating concerns, of which 52 were in Alberta, 251 in British Columbia, 29 in Manitoba, 255 in New Brunswick, 462 in Nova Scotia, 603 in Ontario, 60 in Prince Edward Island, 1,151 in Quebec, and 16 in Saskatchewan.

The total capital invested in the industry, including land, buildings and plant, machinery and tools, stocks in process and supplies, and working capital is given at \$149,266,019.

The number of employees on salaries was 2,874 males and 285 females, who received payments totalling \$3,554,097. The average number of employees on wages was 25,516 engaged in logging operations, and 28,820 in the mills, and their combined wages amounted to \$34,412,411.

The aggregate value of production in 1917 was \$115,777,130. The census covered 29 kinds of lumber, 11 of shingles, 10 of lath, 6 of pulpwood and 10 of miscellaneous products, including cooperage stock, veneer, ties, poles, posts, dressed lumber, etc. The principal kinds of lumber by species of wood used, were spruce, 1,466,558 m. ft.; white pine, 791,609 m. ft.; Douglas fir, 706,996 m. ft.; hemlock 322,722 m. ft.; cedar, 149,999 m. ft.; red pine, 119,321 m. ft.; balsam fir, 102,373 m. ft.; and all other varieties, including custom sawn lumber, 483,133 m. ft. The total quantities and values of lumber, lath, shingles and pulpwood cut, and of miscellaneous products were as follows:

Kind	Unit of Measure	Quantity	Value
Lumber	m. ft.	4,142,711	\$83,547,322
Lath	m.	616,909	1,828,018
Shingles	m.	3,024,452	8,431,215
Pulpwood	cords	988,444	10,543,630
Miscellaneous Products (Val. only)			11,426,945

These figures are subject to final revision.

What Lumber Operators Must Observe

Hon. E. A. Smith, Minister of Lands and Mines for the Province of New Brunswick, recently sent out copies of the new regulations which must be observed by all operators on the Crown Lands of New Brunswick. Heavy penalties for the infraction of any enactments are levied and copies are prominently posted in all the leading camps.

The regulations are as follows:—

Diameter Limit—No sound butted spruce or pine tree that will not measure twelve inches in diameter inside the bark on the stump and no sound butted fir tree that will not measure nine inches in diameter inside the bark on the stump shall be cut other than those actually necessary in the clearing of roads, yards, landings, etc.

Stump Height—All sound butted trees must be cut as low as possible and never higher than sixteen inches regardless of snow conditions.

Saw to be Used—The saw shall be used in felling trees and cutting them into logs; if the axe is used the length for scaling shall be taken from point to point being the extreme length of the log.

Trimming Allowance on Logs—Six inches over-run in the length of a log shall be the maximum allowance made for trimming; if this is exceeded the log will be scaled as one foot longer.

Size of Tops—All tops shall be taken out to as low a diameter as possible. Spruce tops 6 inches in diameter is the maximum allowed except in case of very bushy top, when 7 inches will be allowed. Fir 6 inch top is the maximum allowed. Pine 7 inch top is the maximum allowed.

Mixing Logs—Logs cut on Crown Lands shall be placed in separate brows from those cut on Granted Lands and shall be marked with a different mark.

Skids, Roads, Bridges, Camps, Hovels—No spruce or pine shall be used as skids or in the building of roads or bridges where other species are available. Where soft wood must be used fir must be taken in preference to spruce.

Lodged and Burned Trees and Windfalls—All lodged trees, all spruce and pine necessarily cut out of roads, yards, landings, etc., and any dead, burnt or blown down trees suitable for lumber shall be taken out.

Protect Young Growth—All reasonable care must be taken to prevent injury to young spruce trees below the diameter limit.

Penalty—It is the scalers' sworn duty to report all contraventions of the Regulations and a penalty stumpage of \$7.50 per thousand and will be charged except in the case of sections 3 and 4, which are covered by a penalty scale.

Game Protection—Scalers are sworn to report all violations of the Game Laws coming under their notice.

Planing Mill Improvements

Every Manufacturer in the Lumber Industry realizes that to be "up-to-date" their Factory should be installed with Shaving Exhaust Fans.

The Sheldon Shaving Exhaust Fan

is especially designed to suit your particular requirements giving greater efficiency and independence than any other on the market.

DUNLOP "Gibraltar RedSpecial"

POWER—SPEED—SERVICE

NOTHING short of remarkable was the advent of this master Dunlop Belt "Gibraltar RedSpecial." Its coming undoubtedly solved that momentous problem which had for years baffled belt users, namely, the economical transmission of power, combined with an unusual length of service.

Dunlop Workmanship An Important Factor

"Gibraltar RedSpecial" superiority lies not alone in the supreme quality of the materials embodied in it. Dunlop Workmanship, the character of which is unsurpassed, has also contributed its quota. This accounts for its great tenacity, its enduring flexibility and its absolute uniformity throughout.

Held In High Favour

Resistance to destructive elements, and the unusual capacity to continually deliver the maximum of power with the minimum of up-keep expense, are characteristics of "Gibraltar RedSpecial" which have placed this belt on the pinnacle of popular favour.

Where This Belt Excels

"Gibraltar RedSpecial" is particularly adapted to Saw, Lumber, Pulp or Paper Mills, Bleacheries, Mines, Cement Plants, Brick Yards, Oil Wells, Threshers and Stone Crushers. It is built especially to withstand the jerky strains consequent on the fluctuation of power under any load; is immune to the deteriorating effects of an over-abundance of moisture, or, as in the case of Pulp and Paper Mills and Bleacheries, injurious vapour fumes. Maximum adhesion over small pulleys on high-speed machines is another reason why this belt predominates.

The Dunlop Guarantee

If you have a difficult drive anywhere in your factory drop a line to our Head Office, or to our nearest branch, and we will send a man experienced in belt engineering to consider your requirements. If it is an instance where the "Gibraltar" Belting may be suitably employed we will recommend its use; and we will stand behind our recommendation with the fullest guarantee ever issued by a firm producing rubber products.

The J. H. Still Manufacturing Company, 41 Elm Street, St. Thomas, Ont., want prices on a quantity of oak, hickory and other timber.

W. C. Edwards & Company, Limited, of Ottawa, have given notice that application will be made to Parliament at its next session, for an increase of the capital stock of the company from \$4,400,000 to \$8,000,000.

The Hout Paper Mills at Camden East, which were bought some time ago by the Bathurst Lumber Company, of Bathurst, N.B., have been put in operation and are turning out fifteen tons of wrapping paper daily. George Thomson is resident manager of the plant.

The Woodruff Manufacturing Company, Limited, has been incorporated with a capital stock of \$100,000, and head office in Merriton, Ont. The company is empowered to carry on the manufacture of paper, paper yarn, sulphite and other products, together with the business of millwrights, mechanical engineers, etc.

The Meaford Manufacturing Company, Meaford, Ont., have been advertising for logs and have received a large number from the farmers and others in that vicinity. The firm pay for the logs on the first of the month following delivery and the cut this year will be a big one. Wm. Rows is acting as log buyer and inspector for the Meaford Mfg. Company for this season.

Latest reports from the various lumber companies are that there have been more applications for work in the bush than has been received at any time during the past two years. One northern concern had application for more than double the number of men required. The employment agencies report that there is no difficulty in attending to all the requests made to them by firms for help in woods operations.

Restrictions on the export of silver spruce and Douglas fir have been removed by the Canadian Government. Owing to their necessity for aeroplane construction, exportation has been forbidden except for the Imperial Munitions Board. As the Munitions Board has received instructions to cease the production of aeroplane spruce, the restrictions are no longer considered necessary. The spruce is secured from British Columbia.

The Canadian National Safety League has been incorporated, with head office at Toronto, Ont., without share capital throughout the Dominion. The objects of the league are to minimize the injuring and killing of persons employed in stores, factories, workshops and all departments of industrial and mercantile activity, in instilling into the minds of employer and employee the full meaning of "Safety Always." L. B. Howland, lumber merchant, Toronto is one of the incorporators.

The Harris-Brooks Lumber Company, of Meridian, Miss., the controlling interest of which is held by the Frank Harris Lumber Company, of Toronto, have recently taken over two sawmills and a planing mill, operated by the B. F. Brucker Lumber Company at High Point, Miss. The sawing capacity of the two mills is about 60,000 feet a day and considerable business of dressing in transit will be done. The Harris-Brooks Lumber Company will continue to cut southern pine and hardwoods. W. H. Harris, of Toronto, who has recently been spending several weeks in the south, has returned to Toronto.

Manson's Ltd. has been incorporated with a capital stock of \$300,000, and headquarters in Hawkesbury, Ont. The company is authorized to manufacture and deal in ground wood and sulphite pulp, paper, cardboard and paper materials as well as to maintain and operate mills for the manufacture of timber, lumber and pulpwood. The company has erected a suitable building in Hawkesbury which has been equipped with grinders, screens and wet machines. At present the company is, by means of scow and electrically operated suction pump, drawing the screenings from the bed of the river, which is covered in many places to the depth of several feet. The screenings are thickened and put through special grinders, screens and wet machines, and sold by Manson's Ltd., as a low grade of sulphite pulp, for which there is a splendid demand at the present time.

Eastern Canada

Joseph R. Cartier, lumberman, Montreal, P.Q., has been registered.

J. L. Fussy and J. E. Desbiens, lumber merchants, Three Rivers, P.Q. have been registered.

The Valley Lumber Company, Stanstead, P.Q., has been registered. Elwood R. Burbank is interested.

The annual meeting of the Canadian Pulp & Paper Association will be held at the Ritz Carlton Hotel, Montreal, on January 31st.

The site has been purchased for an interior trim and furniture factory at Montreal, P.Q., by Castle & Son, 538 St. Catherine St. West. Work will likely go ahead in 1919.

During a recent severe storm which swept over Quebec and district recently, the firm of J. Burstall & Company, lumber merchants, at Sillery, lost a large quantity of square timber which broke away from the boom.

The Gulf Pulp & Paper Company, Clarke City, P.Q., are contemplating the erection of a paper mill. The company intend to fabricate newsprint in conjunction with the present pulp plant. T. Clarke is the superintendent.

J. H. Thickens, who for several years has been manager of the pulp and paper division of the Bathurst Lumber Company, Bathurst, N.B., is now with the George H. Mead Company, Dayton, Ohio, in the operating department. Previous to his departure from Bathurst, Mr. Thickens was presented by the employees of the pulp mill with a gold watch, and by the office staff with a diamond pin.

The Brompton Pulp & Paper Company, East Angus, P.Q., have acquired the Odell Manufacturing Company, of Groveton, New Hampshire. This concern will now form part of the Brompton Corporation, under the name of the Groveton Paper Company, Inc. The Odell Company products include two hundred tons of sulphite pulp, bond and fibre papers, and in the past the con-

cern were large customers of the Brompton Mills, buying chiefly ground wood pulp. The Odell Company own 31,000 acres of timber limits. An interesting feature of the transaction is that the Brompton mechanical pulp mill was built originally in 1901 to supply the Odell organization.

Campagne Forestiere Bournont has been incorporated with head office at Quebec, P.Q., and capital stock of \$700,000, to carry on business as manufacturers of and dealers in wood and all products thereof. Among those interested are Alcide Beaubien, lumber dealer, of St. Benoit-Labre, and R. Marcotte, of St. Georges.

The Valcartier Lumber & Pulp Company, Limited, has been incorporated with head office at Quebec, P.Q., and capital stock of \$150,000, to carry on business as manufacturers of and dealers in lumber, timber, wood, pulp, pulpwood and products made therefrom. A. W. Cooper, of Beupre, P.Q., is the manager of the company.

All contracts for the production of fir lumber for airplane purposes have been terminated by the Director of the Department of Aeronautical Supplies of the Imperial Munitions Board. Notices have been sent to the sawmills supplying fir for the Munitions Board cancelling contracts. All airplane lumber on hand at the mills would be accepted up to the end of November, according to the statement handed out by the official in charge of this department.

Four men found their death under tragic circumstances within the past twenty-four hours in the bush of the Quebec City district. Adolphe Talbot, of St. Adrien de Ham, was pinned to death under a felled tree. Charles Pelletier, St. Pacome, and Roussel Lambert, of Mount Carmel, in Kamouraska county, died under similar conditions. Charles Cole, Jr., was examining a revolver with another lumberjack and was killed when the firearm accidentally discharged.

Western Canada

The B. C. Box Company, 295 Dufferin Street West, Point Grey, B.C., are contemplating erecting a new box factory, adjoining their present plant, which will be larger and more up-to-date.

A. MacLeod, represented by J. F. Noble, is contemplating the erection of a sawmill at Point Grey, B.C., to cost \$60,000. Mr. Noble has applied for a five year lease of the Higgin's property at Marpole.

Supplementary letters patent have been issued extending the powers of the Rogers Lumber Yards Ltd., of Moosejaw, Sask., by permitting the organization to erect, alter, repair and demolish buildings, structures, etc.

Major Austin C. Taylor, director of the department of aeronautical supplies, Imperial Munitions Board, has announced that instructions have been received to terminate contracts for the production of fir lumber for airplanes.

The shingle mill belonging to A. H. McDonald, Burnaby, B.C., was recently destroyed by fire. The loss is estimated at \$6,000. It is the intention of the owner to rebuild at a cost of approximately \$6,500, as soon as possible.

The Pacific Coast Islands Improvement Company, Limited, has been incorporated, with head office at Vancouver, B.C., and capital stock of \$10,000 to carry on business as exporters, importers of lumber, logs, piles and poles and timber of all descriptions.

The Southin and Weeden Company, Ltd., has been incorporated, with head office at Vancouver, B.C., and capital stock of \$10,000, to acquire and deal with, in whole or in part, the assets of any other company; to buy, sell and trade in timber, lumber, timber lands, etc.

Sealed tenders are being received by the Minister of Lands for B. C., until January 13, 1919, for the purchase of License X1452 to cut 1,820,000 feet B.M. of fir, spruce, balsam, pine and cedar on an area adjoining S.T.L. No. 7526P, near Adams Lake, Kamloops District. One year will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for B. C., until the 2nd day of January, 1919, for the purchase of License X952, to cut 1,995,000 feet of fir, cedar, pine, balsam, and hemlock on an area situated on Obstruction Island, Shelter Arm, Clayoquot District. Three years will be allowed for the removal of the timber.

British Columbia camps under Major Austin Taylor have again broken the spruce production record. During October 5,200,000 feet of spruce have been turned out and under shipment. Incidentally, 1,200,000 feet of fir have been cut. It is understood that this figure is about equal to the output of all the American camps on the Pacific Coast.

Sealed tenders are being received by the Minister of Lands for B. C., until January 13, 1919, for the purchase of license X1447 to cut 6,480,000 feet of fir, cedar, spruce, white pine and hemlock, cedar poles, 725,200 lineal feet; ties, 73,000, and fence posts, on an area on Otter Creek, Kamloops District. Five years will be allowed for the removal of the timber.

Sealed tenders are being received by the Minister of Lands for B. C., until the 26th day of December, 1918, for the purchase of License X1319, to cut 1,622,000 feet of hemlock, fir, tamarack, white pine, spruce and cedar, and 111,500 lineal feet of cedar poles on an area situated on Eagle Creek, near Nelson, Kootenay District. Three years will be allowed for the removal of the timber.

The offices of the Dominion Land Agent and the Crown timber agent which had been separate and distinct in New Westminster, B.C., are being amalgamated. W. D. Magee, who has been Dominion Land Agent, is in charge of the combined offices, with Ed. Walmsley, assistant Crown timber agent, as his assistant. W. E. Beckett, who has been Crown timber agent, is now inspector. The advantage of the new arrangement is that the entire staff will be available for carrying out the work of both departments.

The Beaver Cove Lumber & Pulp Company, Limited, 307 London Bldg., Vancouver, B.C., have started work on the erection of a pulp and lumber mill at Alert Bay, B.C., at a cost of \$750,000. The president and general manager is Mr. M. H. White, and the secretary is Mr. C. C. Pratt. The plant will have a capacity of 40 tons of sulphate pulp and 100,000 feet of lumber per diem. The steam equipment will comprise five 300-h.p. vertical tube boilers, and will drive a 2,250 h.p. 1,500 kilowatt turbine and generator. The company will develop Hydro-power later when steam plant will be kept in reserve.

The National Tie & Timber Company, Ltd., has been incorporated with head office at Winnipeg, Man., and capital stock of \$20,000, to carry on business as general lumber merchants; to buy, own, sell, deal in, lease or otherwise acquire timber limits, logs, lumber, railroad ties; to manufacture every and all kinds of lumber boards and building materials; to erect, and operate sawmills, planing mills and other mills and buildings for the use of manufacturing lumber, ties and building material; to contract for, own, lease and operate lumber and logging roads, for the purpose of transporting timber, logs, lumber, supplies and merchandise of all kinds.

PROCTOR QUESTIONNAIRE

If you will answer these questions we will study your conditions and attend to your needs promptly:

- (1) How are you now drying your veneer or other material?
- (2) How many square feet are you drying per hour?
- (3) How many square feet would you like to dry per hour?
- (4) What is the thickness?
- (5) What kind of wood?
- (6) Rotary cut, sliced or sawed?
- (7) What troubles do you have, if any?
- (8) What is the present drying temperature?
- (9) Are you crowded for space?
- (10) How is the material handled to and from the dryer?
- (11) How many men are you employing in drying?
- (12) What kind of steam are you using, and how much?
- (13) Does material run in large lots of one kind or in small lots?
- (14) How much power are you using for drying?

Should you in turn wish to ask questions about Proctor's Dryers, we will gladly answer them. Make a questionnaire for us and we will fill in the answers and mail the blank back to you by return mail if possible.

The Carriage You Are Looking For

Our No. 1 Size

CARRIAGE—Has three head blocks, as shown in cut, usually set 9 and 6 feet apart, will be placed any distance apart to suit purchaser. Knees open 38 in. from saw, and is fitted with Knight or Peel dogs, as desired. Taper movement on each knee. 1 15-16 in. steel set bar with steel pinions and coil spring receder, and friction lever brake for stopping knees where required. Timbers are 5 x 6 in., or heavier if desired, well bolted and braced. Diameter of truck wheel, 12 in. Axles 1 3/4 in. diameter, and extend clear across carriage, are furnished with self-oiling bearings. Front block is fitted with timber rule, placed as desired; 54 feet of V. and flat track furnished with each carriage.

SET WORKS—As shown in cut, is made up of ratchet wheel 12 in. diameter, 4 in. face, with set lever carrying 7 steel pawls of varying lengths; also, same number of check pawls set in quadrant. Both sets of pawls are disengaged from either side of carriage when required to recede knees. This is a positive set, without lost motion.

FEED WORKS—As shown in cut, consists of 16 x 12 in. drum, with spur gear keyed to shaft. Pinion or friction shaft in saw frame engages with this gear. Cable takes two or three turns around drum, and is passed around end sheaves and attached to carriage. We also furnish 26 in. drum with internal gear in place of 16 in. drum when desired.

Prepare for Increased Business After the War

The most encouraging reports are coming to hand of a prospective tremendous increase in the demand for lumber for all sorts of new construction work and reconstruction work, now that the war has practically ceased. To get your share of this increasing business you will find it profitable to

Use Skidding and Loading Machinery

By the use of this Machinery you will be able to get out your logs more quickly, and at less cost, thereby increasing your profits.

If in doubt as to methods consult us.

Marsh Engineering Works, Limited Established 1846

Sales Agents, Mussels Limited, Montreal, Winnipeg and Vancouver.

Belleville, Ont.

GOODHUE BELTING

For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100% of your power

For the wet places in the mill we have a special waterproof leather belt—"Acme." Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

Send for prices and particulars

Original "Dunbar" Machines

We are the original and the only makers of "Dunbar" Shingle Machines, Lath Machines, Clapboard Machines, Steam and Gasoline Logging Engines. Each is the best for its particular work. Are you using the best?

Lath Machine

From our many years of experience we evolved this "Dunbar" Original Lath Machine. Every improvement that could be suggested, every time-tested idea for the betterment of product and for greater speed, has been incorporated in this machine. We believe it has no equal, and there are a great number of mill men throughout Canada who share this belief with us. Carefully constructed of high grade materials and designed to work steadily under the hardest conditions.

Steam and Gasoline Logging Engines

Conditions in Canada necessitate an engine that will stand any amount of strain and hard work in the lumber industry. With this idea in mind we have brought out the "Dunbar" engines perhaps a little stronger than is really needed. They do their work easily and willingly, and stand a great amount of hard usage. Built entirely in Canada for the Canadian lumber trade.

Clapboard Machine

You will need no excuse for the quality of your product if you use the original "Dunbar" Clapboard Machine. Expert in every detail. This machine will give you the very best service under most trying conditions. It will turn out work without delays. It will need practically no repairs and will increase your output. We cannot recommend it too highly because it is giving this very service to lumbermen in all parts of this country.

Send for catalogues of any or all of these machines.

Dunbar Engine & Foundry Co.

There is Nothing Difficult —

in the making of the fine, narrow, or the mammoth wide Bandsaws if you possess the knowledge, the steel and the facilities.

We have been manufacturing all types of saws for many years, our experience is broad and practical, we have been making Disston Crucible Steel since 1855 and our equipment is unequalled.

These are the reasons why Disston Saws are profit producers for you.

THESE TWO DISSTON SAWS ARE 60 FEET LONG, 18 INCHES WIDE, 11 GAUGE, 3 INCH SPACE TEETH, EACH WEIGHING 434½ POUNDS

Many Fires in Lumber Mills have been caused by Hot Boxes

This risk can be eliminated by the use of

Chapman Double Ball Bearings

— IN —

Shafting, Hangers, Pillow Blocks
Loose Pulleys, etc.

Chapman Double Ball Bearings

decrease the friction loss 75% and do not generate heat.

No oil is used, a little Tranco Grease once or twice a year is the only lubricant required, consequently dust does not adhere to the outside of the bearing.

There is no spoilage from oil drip, and cleanliness may be easily maintained.

If you realized what these savings mean you will agree that

**You pay for Chapman bearings
whether you buy them or not**

GRATON & KNIGHT
 Standardized Series
LEATHER BELTING

Tanned by us for belting use

When the Belt Works Right

One ounce of performance is worth a ton of speculation as to horse-power delivery. The best answer in belt performance is when the belt works right—with the utmost of uninterrupted driving energy; with economy written into every fuel bill.

Write for a copy of our booklet, "Standardized Leather Belting," explaining scientifically the application of standardization to belting.

ATKINS

ALWAYS AHEAD!

The most advanced improvements in Saw manufacture have placed us far ahead in the manufacture of Saws for all uses.

Our Band and Circular Saws are worthy examples. They cut more timber—do it with less power and require less repair to be kept in perfect condition.

Economy in mill operation has proved their value. Put them through competitive tests with other Saws.

The Sterling quality of

Atkins Sterling Steel Saws

will overcome your difficulties.

E. C. ATKINS & CO.

Factory—HAMILTON, ONT.

VANCOUVER MACHINERY DEPOT, LTD., VANCOUVER, B. C.

Patented Nov. 29 '92; July 19 '10.

Grooves cut with Huther Bros. Dado Heads.

**Fits Any
Saw Mandrel**

A Huther Bros. Dado Head
consists of two outside cut-
ters and enough inside cutters
to make the required cut. This
Head will cut perfect grooves,
with or across grain, any width.
It is an easy Head to keep in
perfect condition, has a simple
quick adjustment, and may be
enlarged any time after pur-
chase. Sent on approval and
if not satisfactory return at
our expense.

Speed and Reliability

Our No. 3 Lath Machine

has a remarkable capacity for output and stands up to the strain of continuous running at full pressure as few other lath machines can do. By its superior strength and great speed it is particularly valuable to mills doing a big volume of work. This fact is established by constant repeat orders from the larger mills. Floor space required, 4 feet by 4 feet 6 ins.; weight 1,600 pounds. Maximum power required, 15 h.p. **Shipped to you immediately from stock.**

Send for catalogue and list of machinery available for shipment.
We make all kinds of equipment for the lumber industry.

The E. Long Manufacturing Company, Ltd.
Orillia ∴ Ontario

Steel Carriages

Built with knee opening of 36", 50", 60" and 72". Supplied in any length and with any number and spacing of head blocks. Designed for rope or steam feed. Bulletin 107.

Frame

The frame is built to eliminate spring. Stringers and cross girts of 8 in. x 6 in. selected oak, braced through-going tie rods and substantial corner brackets. Stringers are iron banded to prevent wear.

Running Gear

All steel. Double axles under each log seat. Bearing surfaces everywhere much larger than is the usual practice. Adjustment to take up wear provides means of quick re-alignment.

Head Blocks

Cast of toughest steel throughout. Log seats of double girder section with wide heavy nigger nose, braced internally and steel faced with reversible lining plates. Knees high and of new design, are steel faced, provided with nigger hook and spring cushioned, self aligning taper movement of 6 inches.

Racks and Pinions

Cut from the solid steel with deep involute tooth. Extra wide with the pinion split and adjusted to overcome back lash.

Dogs

These carriages are provided with Waterous Inserted Tooth Dog, latest and most common sense dog on the market. Damaged teeth can be withdrawn and replaced without disturbing the dog in the knee. Designed to swing to draw the log against the knee tightly and firmly. Small logs, large logs and cants of all sizes handled equally well.

Set Works

Our No. 4 Combination Set Works. A setter and receder in one machine. **Cannot develop lost motion.** We can prove this. New form of pawl. All operating parts of steel or wrought iron. The strongest, quickest acting, most exact set works yet produced.

Waterous

BRANTFORD, ONTARIO, CANADA

"FROST KING" METAL

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal, made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 35c per lb., Fort William and East; West of Fort William, 40c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our TROJAN BABBITT will stand where all other metals will fail. Price, Fort William and East, 85c per lb.; West of Fort William, 88c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

\$5,000,000.00
worth of mixed metal
sold annually.

HOYT METAL CO., Toronto, Canada

Have factory and office at Eastern Avenue and Lewis Street, Toronto, Canada

Factories also at:—

New York, N. Y.

London, Eng.

St. Louis, Mo.

**Not altogether what we
say, but what users say**

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs,
in calm weather, 30,000 in a head wind.
